CTF-i春秋网鼎杯第四场部分writeup

因为我们组的比赛是在第四场，所前两次都是群里扔过来几道题然后做，也不知道什么原因第三场的题目没人发，所以就没做，昨天打了第四场，简直是被虐着打。

shenyue

下载题目，打开发现是脚本代码，代码如下

```
import sys
from hashlib import sha256

current_account = ""
secret = '*****'

def authenticate(cred_id, cred_pw):
    return sha256(secret+cred_id).hexdigest()

member_tbl = {'shenyue': authenticate('shenyue', "*****")}

def menu():
    print "==== administration console ===="
    print "1. sign up"
    print "2. log in"
    print "3. private key generation"
    print "-1. command execution"

def get_cred():
    cred_id = raw_input("id: ")
    cred_pw = raw_input("pw: ")
    return (cred_id, cred_pw)

def sign_up():
    (cred_id, cred_pw) = get_cred()

    if member_tbl.has_key(cred_id):
        print "id already exists"
        return

    member_tbl[cred_id] = cred_pw
    print "successfully registered"

def login():
    global current_account
```

```
- - -  
(cred_id, cred_pw) = get_cred()  
if member_tbl.has_key(cred_id):  
    if member_tbl[cred_id] == cred_pw:  
        print "logged in as %s" % cred_id  
        current_account = cred_id  
  
    else:  
        print "wrong password"  
  
else:  
    print "id doesn't exist"  
  
def member_key_generation():  
    global current_account  
  
    if current_account == "":  
        print "need to log in to generate your private key"  
        print "this private key doesn't take information from your password"  
        print "because we are too worried about the plaintext password leaked... :'"  
    else:  
        cmd = raw_input("which command do you want to execute: ")  
        key = authenticate(current_account+cmd, secret)  
        print "generating your key associated with", current_account  
        print "you can use the key to execute a command"  
        __import__('time').sleep(1)  
        print "your id+cmd combination results in", key  
        print "Kindly reminder: please don't give your key to anyone"  
  
def command_exec():  
    cmd = raw_input("what command? ")  
    cred_id = raw_input("who signed this command? ")  
    key = raw_input("give me the signed document: ")  
  
    print "ok, let me check if this sign is issued by this system"  
    if authenticate(cred_id+cmd, secret) == key:  
        if member_tbl.has_key(cred_id):  
            print "ok, good good"  
            print "flag is: *****"  
            return  
  
    print "don't be fooled"  
    return  
  
if __name__ == "__main__":  
    menu()  
  
choice_tbl = {  
    '1': sign_up,  
    '2': login,  
    '3': member_key_generation,  
    '-1': command_exec  
}  
  
try:  
    while True:  
        selection = raw_input("> ")  
        choice_tbl[selection]()
```

```
except Exception as e:  
    print "?"  
    sys.exit(0)
```

发现如果想获得flag，需要调用command_exec()函数，而输入-1则可以访问该函数，控制台共有4个选项，1是注册账号功能；2是登陆账号功能；3是生成私钥功能；-1是执行验证命令，而-1可以访问command_exec()函数。

我们先在本机上运行一下脚本

第一步选择1，随便输入账号密码，注册成功。

```
C:\>python shenyue.py  
==== administration console ====  
1. sign up  
2. log in  
3. private key generation  
-1. command execution  
> 1  
id: 1  
pw: 1  
successfully registered
```

第二步选择2，登陆上次输入的账号密码，登陆成功。

```
> 2  
id: 1  
pw: 1  
logged in as 1
```

第三步选择3，生成私钥，生成成功。

```
> 3  
which command do you want to execute: 1  
generating your key associated with 1  
you can use the key to execute a command  
your id+cmd combination results in 165041abc86b3634393983fa29d4f5bc9a0f799139b6dbbbcb87fd67e79e3b6b  
Kindly reminder: please don't give your key to anyone
```

第四步选择-1，验证账号和私钥，得出flag。

```
> -1  
what command? 1  
who signed this command? 1  
give me the signed document: 165041abc86b3634393983fa29d4f5bc9a0f799139b6dbbbcb87fd67e79e3b6b  
ok, let me check if this sign is issued by this system  
ok, good good  
flag is: *****
```

但是由于本地执行flag并不在程序内，要不直接查看源代码就可以了，所以我们用kali登陆，输入nc 106.75.73.135 31245(题目有给出地址)，执行一次与上相同的步骤。

```

文件(F) 编辑(E) 查看(V) 搜索(S) 终端(T) 帮助(H)
==== administration console ====
1. sign up
2. log in
3. private key generation
-1. command execution
> 1
id: 1
pw: 1
successfully registered
> 2
id: 1
pw: 1
logged in as 1
> 3
which command do you want to execute: 1
generating your key associated with 1
you can use the key to execute a command
your id+cmd combination results in 38a695be342fa70149aaa34a278dd3929cad11a5f82c3
2e1408e5432a5e80992
Kindly reminder: please don't give your key to anyone
> -1
what command? 1
who signed this command? 1
give me the signed document: 38a695be342fa70149aaa34a278dd3929cad11a5f82c32e1408
e5432a5e80992
ok, let me check if this sign is issued by this system
ok, good good
flag is: flag{5a5885ff-6870-47d0-8056-1cbef8fc38b1}

```

顺利得出flag为: `flag{5a5885ff-6870-47d0-8056-1cbef8fc38b1}`

(其实这就是个送分题...)

shanghai

这个应该是Vigenere密码，但是Vigenere密码是要密钥的，但是这并不重要，<https://www.guballa.de/vigenere-solver>，这个网站支持自动解密。扔进去就ok了。

Input

Cipher Text:

```

Clear text [hide]

Clear text using key "icqvigenere":

```
each row starts with a key letter. the rest of the row holds the  
letters a to z (in shifted order). although there are 26 key rows  
shown, a code will use only as many keys (different alphabets) as  
there are unique letters in the key string, here just 5 keys: {l, e,  
m, o, n}. flag, '{' and 'vigenereisveryeasyhuh' and '}' for  
successive letters of the message, successive letters of the key  
string will be taken and each message letter enciphered by using its  
corresponding key row. the next letter of the key is chosen, and that  
row is gone along to find the column heading that matches the message  
character. the letter at the intersection of [key-row, msg-col] is
```

得到flag为: flag{vigenereisveryeasyhuh}

这个网站可以解出密钥，密钥居然是icqvigenere！

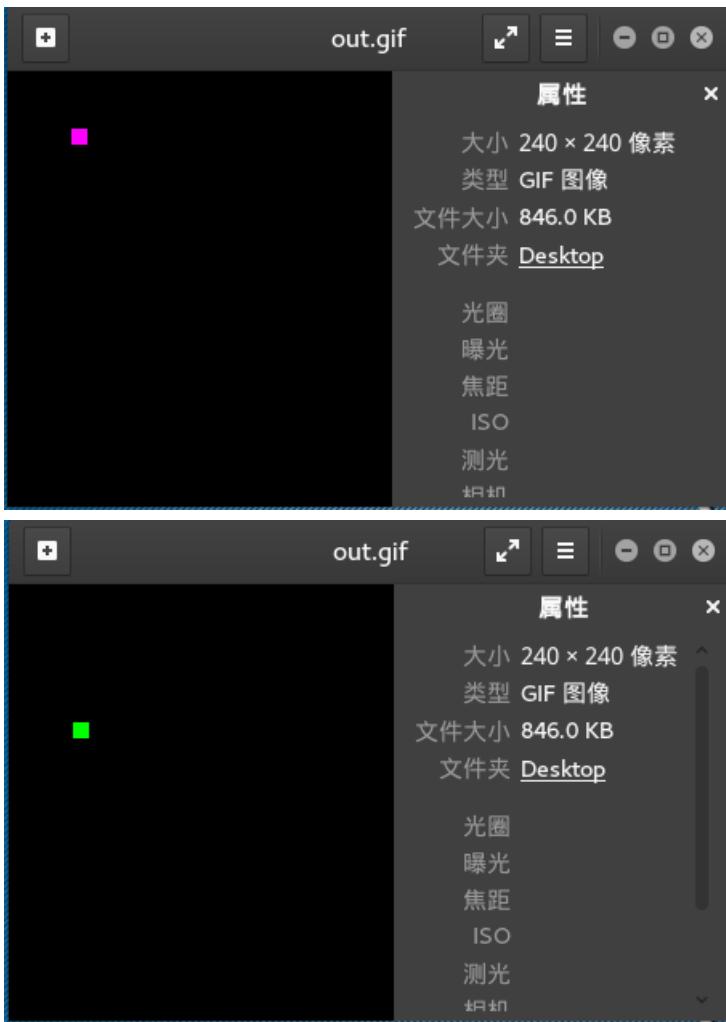

Details [hide]

Key	"icqvigenere"

Clear text score (fitness)	88.43

双色块

下载题目发现只有一个文件且为gif文件

可以正常打开，且只存在绿色和紫色两个颜色，分布不均匀

先丢到winhex看了一下有没有插入其他文件，确实找到了png头文件

```
000B3940 20 00 3B 89 50 4E 47 0D 0A 1A 0A 00 00 00 0D 49 ;%PNG I
000B3950 48 44 52 00 00 00 F0 00 00 01 40 08 06 00 00 00 HDR @ @
000B3960 82 E8 F1 53 00 01 AF 04 49 44 41 54 78 DA EC 9D ,  S IDATx  I
```

到binwalk分析一下，分离出图片

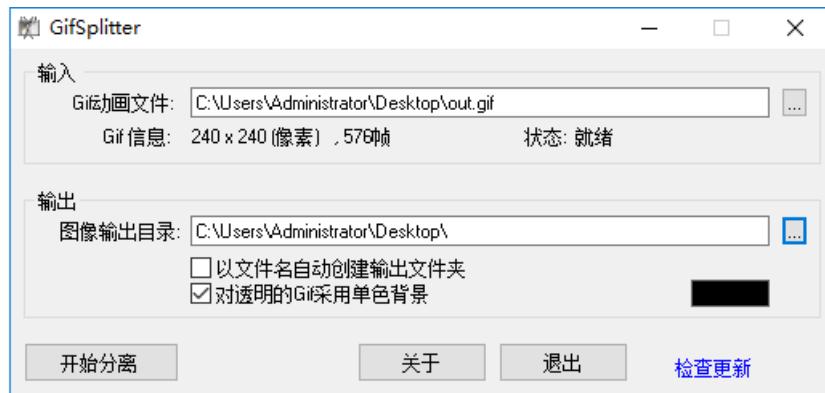

```
root@kali: ~/Desktop# binwalk out.gif
DECIMAL      HEXADECIMAL      DESCRIPTION
-----      -----
0            0x0              GIF image data, version "89a", 240 x 240
735555      0xB3943        PNG image, 240 x 320, 8-bit/color RGBA, non-interlaced
735596      0xB396C        Zlib compressed data, best compression

root@kali: ~/Desktop# dd if=out.gif of=1.png skip=735555 bs=1
记录了110397+0 的读入
记录了110397+0 的写出
110397字节(110 kB)已复制 , 0.259133 秒 , 426 kB/秒
root@kali: ~/Desktop#
```

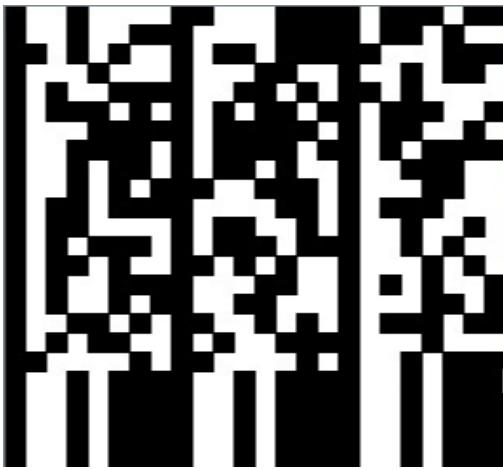

上面写着key，可能下面用得到，继续分析这张图片无异常

接着分离一下gif，分离出576张图片，是 24^2 ，难道是二维码？苦逼的画完二维码后，这什么东西？

1	IMG00000.bmp	2018/8/29 9:38	BMP 文件	169 KB

1000011010000110100001101000011010000
```

按照紫色0, 绿色1的规则排列出以下数据:

```
1001000011000111011011100100111000011101101001101010010110111100011110001000100011001001011010100111001
1010110100001011101010101101100011110111110101100101001111010111101011101011011010011100
10010101110011101000110010110111100001101011100010110001010010010101011101110010100101101001101
01001000101010011110001100101010011001010110010001101100101100101010111011101011001010011110001000
1100001011000010100101111001011110010111100101111001011110010111100101111001011110010111100101111001
01111001011110010111100101111001011110010111100101111001011110010111100101111001011110010111100101111001
```

与ASCII码表(表见下)比对发现紫色1, 绿色0的数据可翻译为编码格式:

o 8DIxK+H8w siXe /ERFpAMaBPiIcjlsHyGOMmQDkK+uXsVZgre5DSXw == hhhhhhhhhhhhhhh

ASCII可显示字符

0111 1110	126	7E	~

这应该是des加密或者base64，但是有提示key，所以应该是des加密，key是上面的图片内容，正常来说des结尾是=，这一堆h去掉就好了。

到<http://tool.chacuo.net/cryptdes>解密

The screenshot shows a web-based tool for DES encryption and decryption. The interface includes fields for 'DES加密模式' (ECB), '填充' (zeropadding), '密码' (ctfer2333), '偏移量' (iv偏移量, ecb模式), '输出' (base64), and a text input field for '待加密、解密的文本'. The input text is a long base64 encoded string: `o8DlxK+HBwsIXe/ERFpAMaBPiIcjlshvGOMnQDkK+uXsVZgre5DSXw==`. Below the input field is a note: '↑将你电脑文件直接拖入试试^-^'. At the bottom, there are two orange buttons: 'DES加密' and 'DES解密'. The result section shows the decrypted output: `flag{2ce3b416457d4380dc9a6149858f71db}`.

得到flag为: `flag{2ce3b416457d4380dc9a6149858f71db}`
