从第一篇大作业博客[2020-04-27](#)到第二篇[2020-05-06](#), 第三篇[2020-05-25](#), 第四篇[2020-06-03](#)到现在, 一个多月了, 虽然其中出现了一些意外情况, 但所幸, 我的数据库大作业1.x 系列可以说是顺利完成了。今天, 我就将我这一个多月做的成果展示一下。

另: 文章结尾处有视频讲解演示以及程序源文件

代码展示就按照每个Java类来吧, 就不按照功能分类了。

初始登陆界面 Login

由一个文本框, 一个密码框, 两个按钮组成

```
import java.awt.*;
import java.awt.event.*;
import java.sql.*;

import javax.swing.*;

public class Login extends JFrame implements ActionListener,ComponentListener
{
    private JTextField tx1;
    private JPasswordField jp; //密码框
    private JButton jb1,jb2;
    private MessageDialog jdialog;
    private ComponentEvent event;

    static String s1,s2;
    static int a; //区分操作来自于学生还是教师
    private static final long serialVersionUID = 1L;

    public Login()
    {
        super("登录界面");
        this.setBounds(600,240,320,120);
        this.setBackground(Color.lightGray);
        this.setLayout(new GridLayout(3,2));
        this.setDefaultCloseOperation(EXIT_ON_CLOSE);
```

```
//第一行
this.add(new Label("用户名",Label.CENTER));
this.tx1=new TextField(15);
this.add(this.tx1);
//第二行
this.add(new Label("密码",Label.CENTER));
this.jp=new JPasswordField(15);
this.add(this.jp);
//第三行
this.jb1 =new JButton("学生登陆") ;
this.add(this.jb1);
this.jb1.addActionListener(this );
this.jb2 =new JButton("教师登陆") ;
this.add(this.jb2);
this.jb2.addActionListener(this );

this.setVisible(true);
this.addWindowListener(new WinClose());
}

public void componentMoved(ComponentEvent e) { }

public void componentShown(ComponentEvent e) { }

public void componentHidden(ComponentEvent e) { }

public void actionPerformed(ActionEvent e)
{
s1=tx1.getText();
s2=new String(jp.getPassword());

if(!s1.equals("")&& !s2.equals(""))
{
try
{
Statement st=Connect.doConnect();
if(e.getSource()==jb1) //学生登录
{
String a0="select * from Student where Sno='"+s1+"'";
//从Student表中查找是否有该学生的学号信息
ResultSet rs=st.executeQuery(a0);
if(rs.next())
{
Search.doSearch(0, 0);
int l=Search.u; //接收来自Search的查询结果, 1为成功, 0为失败
if(l==1)
{
JOptionPane.showMessageDialog(this,"登录成功!");
a=1;
new Student();
dispose(); //关闭当前窗口
}
else
{
JOptionPane.showMessageDialog(this,"用户名或密码输入有误, 请检查输入!");
}
}
}
}
}
else
{
JOptionPane.showMessageDialog(this,"用户名或密码输入有误, 请检查输入!");
}
}
else
```

```
{  
    JOptionPane.showMessageDialog(this,"该用户名尚未注册，请尽快联系教师管理员进行注册！");  
}  
}  
  
else if(e.getSource()==jb2) //教师登录  
{  
    Search.doSearch(0, 1);  
    int l=Search.u;  
    if(l==1)  
    {  
        JOptionPane.showMessageDialog(this,"登录成功！");  
        a=2;  
        new Teacher();  
        dispose();  
    }  
    else  
    {  
        JOptionPane.showMessageDialog(this,"用户名或密码输入有误，请检查输入！");  
    }  
}  
}  
catch (SQLException e2)

        new Delete();
        dispose();
    }

    else if (e.getSource()==jb5) //退出
    {
        new Login();
        dispose();
    }
}

// public static void main(String[] args) {new Teacher(); }

}

```

查询，修改操作统一在一起的类 Search

教师查询平均成绩时直接查询比较麻烦，所以我这里用了视图，先建立相应的试图，然后再查询，关闭显示界面时做一个判断，如果是查询视图的操作，先删除视图，再关闭。

这里说的查询是指学生和教师相应的查询操作，修改是指教师除修改密码操作之外的修改操作。

因为修改密码要进行的操作很难与其他操作统一在一起，所以我另建了一个修改密码的类。

这个类更相当于一个中转站，接受教师或学生的操作选择，再分别转到进行相应操作的不同的类中

```

import java.sql.*;
import javax.swing.*;

public class Search
{
    public int i; //接收信息，1：来自学生端；2：来自教师端
    public int j; //接受各自选项框的选择

    static ResultSet rs;

    static String Ss; //向其他类传输字符串时的静态变量
    static int u; //登录检验时的返回值

    static int p,q,m;

    static Statement st=Connect.doConnect();

    public static void doSearch(int i,int j) throws SQLException
    {
        if(st!=null)
        {
            if(i==0) //登陆检验
            {
                switch(j)
                {
                    case 0: //学生登陆检验
                        String s0="select * from Student where Sno='"+Login.s1+"\' and Scode='"+Login.s2+"\'";
                        ResultSet rs=st.executeQuery(s0);
                        if(rs.next())
                        {

```

```
    u=1;
}
else
{
    u=0;
}
break;
case 1: //教师登陆检验
String s1="select * from Teacher where Tno='"+Login.s1+'\'' and Tcode='"+Login.s2+"\'";
ResultSet rs1=st.executeQuery(s1);
if(rs1.next())
{
    u=1;
}
else
{
    u=0;
}
break;
}
}
else if(i==1) //学生端操作
{
switch(j)
{
case 1: //课程表显示
String s1="select * from Course where Cnum>0";
rs=st.executeQuery(s1);
if(rs.next())
{
    Ss=s1;
    p=4;
        new Output();
    }
    else

    }
}
}
else
{
    JOptionPane.showMessageDialog(null, "数据库连接失败！");
    System.exit(0);
}
}

public static void main(String[] args) { }

}

```

查询显示输出界面 *Output*

这个部分我借鉴了怎么样将数据库的表在Java中界面中显示出来这篇百度文库中的思路以及部分代码在Search类中进行查询或修改操作后需要进行的输出会在这里执行

```

import java.awt.event.*;
import javax.swing.*;
import java.sql.*;

public class Output extends JFrame
{

    private static final long serialVersionUID = 1L;

    private JScrollPane scpDemo; //滚动面板
    private JTable tabDemo; //表格组件
    private JButton jbt,jbt1;
    int b=0; //做一个判断区别，主要在查询平均成绩时用

```

```
ResultSet r;
Statement st;

public Output()
{
    super("输出显示");
    this.setSize(666, 500);
    this.setLayout(null);
    this.setLocation(340, 70);

    this.scpDemo=new JScrollPane();
    this.scpDemo.setBounds(27, 15, 600, 360);
    this.jbt=new JButton("显示数据");
    this.jbt.setBounds(130, 400, 106, 30);
    this.jbt.addActionListener(new ActionListener()
    {
        public void actionPerformed(ActionEvent ae)
        {
            jbtActionPerformed(ae);

        }
    });
    this.jbt1=new JButton("退出");
    this.jbt1.setBounds(410, 400, 106, 30);
    this.jbt1.addActionListener(new ActionListener()
    {
        public void actionPerformed(ActionEvent a)
        {
            try
            {
                jbt1ActionPerformed(a);
            }
            catch (SQLException e)
            {
                e.printStackTrace();
            }
        }
    });
    add(this.scpDemo);
    add(this.jbt);
    add(this.jbt1);

    this.setDefaultCloseOperation(EXIT_ON_CLOSE);
    this.setVisible(true);
    this.addWindowListener(new WinClose());
}

public void jbtActionPerformed(ActionEvent ae)
{
    st=Connect.doConnect();
    int a=Search.p;           //p值不同，输出面板表格不同
    try
    {
        if(st==null)
        {

```

选课界面 Select_C

登录时系统会记住登录名，也就是登录学生的学号，再加上选择课程时输入的课程号就可以基本确定信息

```
import java.awt.*;
import java.awt.event.*;
import javax.swing.*;
import java.sql.*;

public class Select_C extends JFrame implements ActionListener
{
    private JTextField tx1;
    private JButton jbt1,jbt2;

    private static final long serialVersionUID = 1L;

    public Select_C()
    {
        super("选课");
        this.setBounds(650,540,320,90);
        this.setBackground(Color.lightGray);
        this.setLayout(new GridLayout(2,2));
        this.setDefaultCloseOperation(EXIT_ON_CLOSE);
        this.setVisible(true);
        this.addWindowListener(new WinClose());

        //第一行
        this.add(new Label("课程号",Label.CENTER));
        this.tx1=new JTextField(15);
        this.add(this.tx1);
        //第二行
        this.jbt1=new JButton("选课");
        this.jbt2=new JButton("重选");
        this.add(this.jbt2);
        this.add(this.jbt1);
        this.jbt1.addActionListener(this);
        this.jbt2.addActionListener(this);
    }

}
}

//public static void main(String[] args) { new Select_C(); }
}

```

数据库连接类 Connect

整个实验过程中几乎每个类都需要连接数据库，所以我就单独写了一个类。

这个连接代码大部分内容是我百度的□之后根据我的需要改的。

```

import java.sql.*;

public class Connect
{
    public static Statement doConnect()
    {
        String JDDriver = "com.microsoft.sqlserver.jdbc.SQLServerDriver";// SQL数据库引擎
        String connectDB = "jdbc:sqlserver://127.0.0.1:1433;DatabaseName=你想进行操作的数据库名称";// 数据源
        try
        {
            Class.forName(JDriver);// 加载数据库引擎，返回给定字符串名的类
        }
        catch (ClassNotFoundException e)
        {
            // e.printStackTrace();
            System.out.println("加载数据库引擎失败");
            // JOptionPane.showMessageDialog(this,"学号栏不能为空！");
            System.exit(0);
        }
        System.out.println("数据库驱动成功");
        try
        {
            String user = "你自己的登录名";
            String password = "你自己的登录密码";
            Connection con = DriverManager.getConnection(connectDB, user, password);// 连接数据库对象
            System.out.println("连接数据库成功");
            Statement stmt = con.createStatement();
            return stmt;
        }
        catch (SQLException e)
        {
            e.printStackTrace();
            System.out.println("数据库连接错误");
            System.exit(0);
        }
        return null;
    }
    //public static void main(String[] args) { }

}

```

插入学生信息+修改学生信息 Insert

插入学生信息界面和修改学生信息界面的布局基本相同，要进行的操作也相近，所以我就写在了一个类里面，就是加了一个判断，在生成这个界面时作一个判断，看要进行的操作是插入还是修改。

```

import java.awt.*;
import java.awt.event.*;
import java.sql.*;
import javax.swing.*;

```

```
public class Insert extends JFrame implements ActionListener
{
    private JTextField jtx1,jtx2,jtx3,jtx4,jtx5,jtx6,jtx7;
    private JButton jb1,jb2,jb3;

    String s6,s7;
    static int x=0;      //做判断，看是输入学生信息，还是更改学生信息

    private static final long serialVersionUID = 1L;
    public Insert()
    {
        super("请输入信息");
        this.setBounds(380,240,750,120);
        this.setBackground(Color.lightGray);
        this.setLayout(new GridLayout(3,5));
        this.setDefaultCloseOperation(EXIT_ON_CLOSE);
        this.setVisible(true);
        this.addWindowListener(new WinClose());

        //第一行
        this.add(new Label("学号",Label.CENTER));
        this.add(new Label("姓名",Label.CENTER));
        this.add(new Label("年龄",Label.CENTER));
        this.add(new Label("性别",Label.CENTER));
        this.add(new Label("专业",Label.CENTER));
        //第二行
        this.jtx1=new JTextField(15);
        this.add(this.jtx1);
        jtx1.setText("0");
        this.jtx2=new JTextField(15);
        this.add(this.jtx2);
        this.jtx3=new JTextField(15);
        this.add(this.jtx3);
        jtx3.setText("0");
        this.jtx4=new JTextField(15);
        this.add(this.jtx4);
        this.jtx5=new JTextField(15);
        this.add(this.jtx5);
        //第三行
        this.jb2=new JButton("重新输入/再次添加");
        this.add(this.jb2);
        this.jb2.addActionListener(this );
        this.jtx6=new JTextField(15);
        this.add(this.jtx6);
        jtx6.setEnabled(false);
        this.jb1=new JButton("确定");
        this.add(this.jb1);
        this.jb1.addActionListener(this );
        this.jtx7=new JTextField(15);
        this.add(this.jtx7);
        jtx7.setEnabled(false);
        this.jb3=new JButton("退出");
        this.add(this.jb3);
        this.jb3.addActionListener(this );
    }

    public void actionPerformed(ActionEvent e)
    {
```

```
String s1=jtx1.getText();
String s2=jtx2.getText();
int s3=Integer.parseInt(jtx3.getText());
String s4=jtx4.getText();
String s5=jtx5.getText();

if(jtx1.getText().equals(""))
{
    JOptionPane.showMessageDialog(this,"学号栏不能为空！");
}

else
{
    if(e.getSource()==jb1)
    {
        try
        {
            Statement st=Connect.doConnect();
            if(st!=null)
            {
                if(x==1) //修改学生信息
                {

// public static void main(String[] args) { new Insert(); }
}

```

插入课程信息 *Insert_C*

也是插入相关的操作，本来我想和上面的 *Insert* 类写成一个类来的，但是学生和课程需要的文本框数不一样，写在一起就真的是个大工程了，所以就又写了一个。

```

import java.awt.*;
import java.awt.event.*;
import java.sql.*;
import javax.swing.*;

public class Insert_C extends JFrame implements ActionListener
{
    private JTextField jtx1,jtx2,jtx3,jtx4,jtx5;
    private JButton jb1,jb2,jb3;

    String s6,s7;

```

```
private static final long serialVersionUID = 1L;

public Insert_C()
{
    super("请输入信息");
    this.setBounds(400,240,650,120);
    this.setBackground(Color.lightGray);
    this.setLayout(new GridLayout(3,4));
    this.setDefaultCloseOperation(EXIT_ON_CLOSE);
    this.setVisible(true);
    this.addWindowListener(new WinClose());

    this.add(new Label("课序号",Label.CENTER));
    this.add(new Label("课程名",Label.CENTER));
    this.add(new Label("先修课",Label.CENTER));
    this.add(new Label("学分",Label.CENTER));
    //第二行
    this.jtx1=new JTextField(15);
    this.add(this.jtx1);
    jtx1.setText("0");
    this.jtx2=new JTextField(15);
    this.add(this.jtx2);
    this.jtx3=new JTextField(15);
    this.add(this.jtx3);
    jtx3.setText("2");
    this.jtx4=new JTextField(15);
    this.add(this.jtx4);
    jtx4.setText("0");
    //第三行
    this.jtx5=new JTextField(15);
    this.add(this.jtx5);
    jtx5.setEnabled(false);
    this.jb2=new JButton("重新输入/再次添加");
    this.add(this.jb2);
    this.jb2.addActionListener(this );

    this.jb1=new JButton("确定");
    this.add(this.jb1);
    this.jb1.addActionListener(this );
    this.jb3=new JButton("退出");
    this.add(this.jb3);
    this.jb3.addActionListener(this );
}

public void actionPerformed(ActionEvent e)

// jtx6.setText(null);
}

else if(e.getSource()==jb3) //退出
{
new Teacher();
dispose();
}
}

//public static void main(String[] args) { new Insert_C(); }
}

```

删除信息 Delete

用来删除学生信息和课程信息，由于在数据库中我将Student表中的Sno, Course表中的Cno设成了主码，所以删除时只要确定主码就能确定要删除的元组，一个接受输入信息的文本框就足够了。

```
import java.awt.*;
import java.awt.event.*;
import java.sql.*;
import javax.swing.*;

public class Delete extends JFrame implements ActionListener
{
    private JTextField tex1,tex2;
    private JButton jb1,jb2,jb3;

    String s6,s7;

    private static final long serialVersionUID = 1L;

    public Delete()
    {
        super("Delete interface");
        this.setBounds(500,250,440,100);
        this.setBackground(Color.lightGray);
        this.setLayout(new GridLayout(2,3));
        this.setDefaultCloseOperation(EXIT_ON_CLOSE);
        this.setVisible(true);
        this.addWindowListener(new WinClose());

        //First line
        this.add(new Label("Please enter the primary key number of the record to be deleted",Label.LEFT));
        this.tex1=new JTextField(15);
        this.add(this.tex1);
        this.tex2=new JTextField(15);
        this.add(this.tex2);
        tex2.setEnabled(false);
        //Second line
        this.jb1=new JButton("Re-enter/Redelete");
        this.add(this.jb1);
        this.jb1.addActionListener(this );
        this.jb2=new JButton("Delete");
        this.add(this.jb2);
        this.jb2.addActionListener(this );
        this.jb3=new JButton("Exit");
        this.add(this.jb3);
        this.jb3.addActionListener(this );
    }

    public void actionPerformed(ActionEvent e)
    {
        String s1=tex1.getText();
```

```
if(tex1.getText().equals(""))
{
    JOptionPane.showMessageDialog(this,"输入栏不能为空！");
}
else
{
    if(e.getSource()==jb2)
    {
        int p=Teacher.a;
        if(p==1)      //删除学生信息
        {
            try
            {
                Statement st=Connect.doConnect();
                if(st!=null)
                {
                    String a0="select * from Student where Sno='"+s1+"'";
                    //在数据库中查询是否有与输入相对应的元组
                    ResultSet rs=st.executeQuery(a0);
                    if(rs.next())
                    {
                        String a = "delete from Student where Sno='"+s1+"'";
                        st.executeUpdate(a);
                        //System.out.println("插入数据成功");
                        String s7="恭喜你，删除成功！";
                        tex2.setText(s7);
                    }
                    else
                    {
                        JOptionPane.showMessageDialog(this,"该学号不存在，删除失败！");
                    }
                }
                else
                {
                    JOptionPane.showMessageDialog(this,"数据库连接失败！");
                    System.exit(0);
                }
            }
            catch (SQLException e1)
            {
                e1.printStackTrace();
                //System.out.println("数据库连接错误");
                String s6="很遗憾，删除失败！";
                tex2.setText(s6);
                System.exit(0);
            }
        }
        else if(p==2)    //删除课程信息
        {
            try
            {
                Statement st=Connect.doConnect();
                if(st!=null)
                {
                    String a0="select * from Course where Cno='"+s1+"'";
                    ResultSet rs=st.executeQuery(a0);
                    if(rs.next())
                    {
                        String a = "delete from Course where Cno='"+s1+"'";
```

```

        ResultSet rs=st.executeQuery(a0);
        if(rs.next())
        {
            String a = "delete from Course where Cno='"+s1+"'";
            st.executeUpdate(a);
            //System.out.println("插入数据成功");
            String s7="恭喜你，删除成功！";
            tex2.setText(s7);
        }
        else
        {
            JOptionPane.showMessageDialog(this,"该课序号不存在，删除失败！");
        }
    }
}

else
{
    JOptionPane.showMessageDialog(this,"数据库连接失败！");
    System.exit(0);
}
st.close();// 关闭命令对象连接
}

catch (SQLException e1)
{
    e1.printStackTrace();
    //System.out.println("数据库连接错误");
    String s6="很遗憾，删除失败！";
    tex2.setText(s6);
    System.exit(0);
}
}

}

if(e.getSource()==jb1)
{
//JOptionPane.showMessageDialog(this,"eeeeee！");
tex1.setText(null);
tex2.setText(null);
}

if(e.getSource()==jb3)
{
new Teacher();
dispose();
}

}

// public static void main(String[] args) { new Delete(); }
}

```

修改学生成绩 Change_Grade

在SC表中进行操作，(Sno, Cno) 是主码，根据这两项就能唯一确定元组。

先判断：1.是否有该学号的学生；2.是否有该课程号；3.该学生是否选修了该课程
然后再修改。

这里的修改我好像弄麻烦了，我是先删除相应的元组信息，然后重新插入，额，直接更新不就行了吗？我忘了我当时咋想的了。

。。

```
import java.awt.*;
import java.awt.event.*;
import javax.swing.*;
import java.sql.*;

public class Change_Grade extends JFrame implements ActionListener
{
    private JTextField tx1, tx2, tx3, tx4;
    private JButton jb1, jb2;

    String s6;

    private static final long serialVersionUID = 1L;

    public Change_Grade()
    {
        super("输入界面");
        this.setBounds(600, 240, 500, 120);
        this.setBackground(Color.lightGray);
        this.setLayout(new GridLayout(3, 3));
        this.setDefaultCloseOperation(EXIT_ON_CLOSE);
        this.setVisible(true);
        this.addWindowListener(new WinClose());

        //第一行
        this.add(new Label("学号", Label.CENTER));
        this.add(new Label("课程号", Label.CENTER));
        this.add(new Label("成绩", Label.CENTER));
        //第二行
        this.tx1=new JTextField(15);
        this.add(this.tx1);
        this.tx2=new JTextField(15);
        this.add(this.tx2);
        this.tx3=new JTextField(15);
        this.add(this.tx3);
        //第三行
        this.tx4=new JTextField(15);
        this.add(this.tx4);
        tx4.setEnabled(false);
        this.jb1=new JButton("重新输入");
        this.add(this.jb1);
        this.jb1.addActionListener(this );
        this.jb2=new JButton("确定");
        this.add(this.jb2);
```

```
this.jb2.addActionListener(this );
}

```

修改密码 *Change_code*

这里有多重判断，具体描述详见我之前的博客，这里就不多说了。

```
import java.awt.*;
import java.awt.event.*;
import javax.swing.*;
import java.sql.*;

public class Change_code extends JFrame implements ActionListener
{
    Statement st;

    private JTextField tx1,tx2,tx3,tx4;
    private JButton jbt1;

    private static final long serialVersionUID = 1L;

    public Change_code()
    {
        super("密码修改");
        this.setBounds(610,250,320,120);
        this.setBackground(Color.lightGray);
        this.setLayout(new GridLayout(4,2));
        this.setDefaultCloseOperation(EXIT_ON_CLOSE);
        this.setVisible(true);
        this.addWindowListener(new WinClose());

        //第一行
        this.add(new Label("原密码",Label.CENTER));
        this.tx1=new JTextField(15);
        this.add(this.tx1);
        //第二行
        this.add(new Label("新密码",Label.CENTER));
        this.tx2=new JTextField(15);
        this.add(this.tx2);
        //第三行
        this.add(new Label("再次输入新密码",Label.CENTER));
        this.tx3=new JTextField(15);
        this.add(this.tx3);
        //第四行
        this.tx4=new JTextField(15);
        this.add(this.tx4);
        tx4.setEnabled(false);
        this.jbt1 =new JButton("确定") ;
        this.add(this.jbt1);
        this.jbt1.addActionListener(this );
    }

    public void actionPerformed(ActionEvent e)
    {
        String s1=tx1.getText();
        String s2=tx2.getText();
        String s3=tx3.getText();
        String s4=tx4.getText();
    }
}
```

```
String s3=tx3.getText();

if(s1.length()<=0||s2.length()<=0||s3.length()<=0)
{
    JOptionPane.showMessageDialog(this,"输入不能有空值, 请检查输入! ");
}
else
{
    if(e.getSource()==jbt1)
    {
        try
        {
            st=Connect.doConnect();
            int p=Login.a;
            String s = null;
            int x=s1.compareTo(Login.s2);      //检验原密码与登录密码是否相同
            if(x==0)
            {
                int y=s1.compareTo(s2);      //检验新密码与原密码是否相同
                if(y==0)
                {
                    JOptionPane.showMessageDialog(this,"原密码与新密码不能相同, 请重新输入! ");
                    tx2.setText(null);
                }
                else
                {
                    int z=s2.compareTo(s3);      //检验两次输入的新密码是否相同
                    if(z!=0)
                    {
                        JOptionPane.showMessageDialog(this,"两次输入的密码不一致, 请重新输入! ");
                        tx3.setText(null);
                    }
                    else
                    {
                        if(p==1)      //修改学生密码
                        {
                            s="update Student  set Scode='"+s2+"\'' where Sno='"+Login.s1+"\'";
                        }
                        else if(p==2) //修改教师密码
                        {
                            s="update Teacher  set Tcode='"+s2+"\'' where Tno='"+Login.s1+"\'";
                        }
                        int q=st.executeUpdate(s);
                        if(q!=0)
                        {
                            JOptionPane.showMessageDialog(this,"更改成功, 请重新登录! ");
                            new Login();
                            dispose();
                        }
                        else
                        {
                            JOptionPane.showMessageDialog(this,"更改失败, 请重试! ");
                        }
                    }
                }
            }
        }
    }
}
else
{
    JOptionPane.showMessageDialog(this,"原密码输入错误, 请检查输入! ");
}
```

```
        }
    catch (SQLException e2)
    {
        e2.printStackTrace();
    }
}

//public static void main(String[] args) {new Change_code(); }
}
```

还有最后一个，

WinClose

这个是使用界面关闭相应操作时系统需要生成的

```
import java.awt.event.WindowEvent;
import java.awt.event.WindowListener;

public class WinClose implements WindowListener {

    @Override
    public void windowOpened(WindowEvent e) {
        // TODO Auto-generated method stub
    }

    @Override
    public void windowClosing(WindowEvent e) {
        // TODO Auto-generated method stub
    }

    @Override
    public void windowClosed(WindowEvent e) {
        // TODO Auto-generated method stub
    }

    @Override
    public void windowIconified(WindowEvent e) {
        // TODO Auto-generated method stub
    }

    @Override
    public void windowDeiconified(WindowEvent e) {
        // TODO Auto-generated method stub
    }

    @Override
    public void windowActivated(WindowEvent e) {
        // TODO Auto-generated method stub
    }

    @Override
    public void windowDeactivated(WindowEvent e) {
        // TODO Auto-generated method stub
    }
}
```

OK

以上就是我此次数据库大作业1.x所有的代码了。
终于完成大作业了，开心。

敲开心的

代码有很多不太完善的地方，我也是知道的，比如有的类里面多重的 if-else 语句。还有一些重复代码。也可能有很多我没想到的bug。所以希望各位读者能不吝赐教，有什么问题或者新的想法一起交流。

关于这次实验的实验报告我已经正在写了，再录一段程序讲解视频，这次大作业就算是圆满完成了。

等实验报告和讲解视频完成我也会将链接放在这里。

所以，诸位，再会喽~

程序的源文件 链接：[百度网盘](#) 提取码：a2z3

程序视频讲解 链接：[数据库作业：学生信息管理系统](#)

实验报告 链接：[百度网盘](#) 提取码：avlb

数据库文件 链接：[百度网盘](#) 提取码：1w9a

注意：更改学生成绩的**Change_Grade**类有更新，上面的代码我更新了，源文件没有，如果有使用的话请注意一下。

哦，对了，差点忘说，我的作业代码和其中的操作是根据我的数据库设置而来的，所以如果你的设置和我不同的话，呃——好吧，你们都懂的。

然后就是我的数据库设置我在视频讲解的时候会说，还有就是看完视频的时候，感觉还好的话，可以给我点个赞。

眼神暗示
