使用svn下载maven项目到idea, 启动时报错, 但是同事没问题, 所以就比较了idea的配置, 果然不一样。同事的:

Project SDK:

This SDK is default for all project modules.

A module specific SDK can be configured for each of the modules as required.

1.8 (java version "1.8.0_141")

Project language level:

This language level is default for all project modules.

A module specific language level can be configured for each of the modules as required.

8 - Lambdas, type annotations etc.

Project compiler output:

This path is used to store all project compilation results.

A directory corresponding to each module is created under this path.

This directory contains two subdirectories: Production and Test for production code and test code.

A module specific compiler output path can be configured for each of the modules as required.

我的:

Project SDK:
This SDK is default for all project modules.
A module specific SDK can be configured for each of the modules as required.

12 java version "12.0.2"

Project language level:
This language level is default for all project modules.
A module specific language level can be configured for each of the modules as required.

12 - No new language features

Project compiler output:

https://blog.csdn.net/weixin_43988238

然后我改为1.8的配置就好了
