I am trying to read an image with scipy. However it does not accept the scipy.misc.imread part. What could be the cause of this?

```
>>> import scipy
```

```
>>> scipy.misc
```

```
>>> scipy.misc.imread('test.tif')
```

Traceback (most recent call last):

File "", line 1, in

```
scipy.misc.imread('test.tif')
```

AttributeError: 'module' object has no attribute 'imread'

解决方案

You need to install PIL. From the docs on scipy.misc:

Note that the Python Imaging Library (PIL) is not a dependency of SciPy and therefore the pilutil module is not available on systems that don't have PIL installed.

After installing PIL, I was able to access imread as follows:

```
In [1]: import scipy.misc
```

```
In [2]: scipy.misc.imread
```

```
Out[2]:
```
