文章标签：　python安装scipy.misc

I have installed (actually reinstalled) scipy:

10_x86_64.whl (19.8MB): 19.8MB downloaded

Installing collected packages: scipy

Successfully installed scipy

But the misc subpackage is apparently not included?

16:03:28/shared $ipython

In [1]: from scipy.misc import imread

ImportError Traceback (most recent call last)

in ()

----> 1 from scipy.misc import imread

ImportError: cannot import name imread

What is the way to install the scipy.misc package?

解决方案

I think you need to install PIL as well. From the scipy.misc docs:

Note that the Python Imaging Library (PIL) is not a dependency of SciPy and therefore the pilutil module is not available on systems that don't have PIL installed.
