```java
public static JSONObject getImageSrc(JSONObject params, ActionContext context) throws SQLException, NamingException {
JSONObject json = new JSONObject();

String sID = params.getString("sID");

Connection conn = context.getConnection("system");

String sql = "select sPhoto from sa_opperson where sID = '"+sID+"'";

Table table = DataUtils.queryData(conn, sql, null, null, null, null);

Iterator<Row> iterator = table.getRows().iterator();

if(iterator.hasNext()){

json.put("src", iterator.next().getString("sPhoto"));

}else{

json.put("src", false);

}

return json;

}
```
