## 经过排查发现是创建了两个同名的bean

```
67          * @param br
68          * @return
69          */
70         @RequestMapping(value = "/foodAdd", method = RequestMethod.POST)
```

```
42          * 添加食物
43          */
44         @ValidateAnnotation
45         @RequestMapping(value = "/foodAdd", method = RequestMethod.POST)
```

## 更正baen的名称之后,项目正常启动
